Faxes Sent to British Media logs

During the 1998-2000 period my records indicate that I sent at least 6,137 faxes to the British media,
of which 5,775 went via TPC's email-to-fax service and 362 were sent via fax-modem direct from my computer.
The actual figure is obviously higher since, for most of this period, whenever a recipient asked to be deleted
from my mailing list, I totally wiped all entries including that from the logfile.

In the records "Y" indicates successful transmission from fax-modem, "N" indicates failed transmission from fax-modem.
"E" indicates an error occurred while transmitting via fax-modem and a fax may have been only partly transmitted.
"y" and "n" indicate success or failure via TPC.

In April 2000 I changed the method of operation by recording "R" when a recipient requested removal, rather than
wiping their details from my mailing list and records; and keeping "B" records for when TPC actioned a ban on a

recipient's fax-number, but the recipient did not write to ask me to cease faxing. The purpose of these changes
was to keep more accurate and complete records, but the intention was thwarted by the police complaint.
Also in April 2000, I added some further fax numbers to my media mailing list and records, which is why some of the
faxnumbers below have only a single entry, and some indeed have none.

Faxes Sent to British Parliament logs

During the 1998-2000 period my records indicate that I sent at least 14,480 faxes to the British Parliament in Westminster, of which 9,138 went via TPC's email-to-fax service and 5,342 were sent via fax-modem direct from my computer. The actual figure is obviously much higher since, for most of this period, whenever a recipient asked to be deleted from my mailing list, I totally wiped all entries including that from the logfile.

In the records "Y" indicates successful transmission from fax-modem, "N" indicates failed transmission from fax-modem.
"E" indicates an error occurred while transmitting via fax-modem and a fax may have been only partly transmitted.
"y" and "n" indicate success or failure via TPC.

In April 2000 I changed the method of operation by recording "R" when a recipient requested removal, rather than wiping their details from my mailing list and records; and keeping "B" records for when TPC actioned a ban on a recipient's fax-number, but the recipient did not write to ask me to cease faxing. The purpose of these changes was to keep more accurate and complete records, but the intention was thwarted by the police complaint.

I have the MFJ Differential T tuner with the roller inductor.
I had to use DEOXIT to clean the roller conductor as it gets crud
on the roller wire after extensive use.   I still use it now after
5 years. MFJ augmented this tuner which is belt driven to a
gear driven upgrade which would be a heck of a lot more accurate
than my early version.   It still works okay, but needs a cleaning
as you can work around the corroded spots on the roller inductor.
                            Joe

Sorry if this isn't the right group to ask this, if not and
someone know of a more appropriate group I'd appreciate a
pointer.

I currently have GMRS radios that are rated at "16 miles"
(yeah, maybe on the salt flats or over water, ok, we all
know about that). The are rated at 2W on the GMRS freq's
and .5w on FRS.

Why are the new "25 mile" units still rated at 2W? What's
the difference in the two radios to justify the increased
distance claims?

Can't be frequency or a change to the privacy codes or they
wouldn't work with older radios.

Increased sensitivity/filtering? Hype?

It's just marketing hype Steve. Next thing you know they will be
50-mile units. A 2-watt HT would be lucky to get one mile let alone
25. Even 5-watt GMRS commercial units (like I have) are only useable
over a couple of miles unless you are line-of-sight. The ONLY way you
are going to get reliable communications over that kind of distance is
through a repeater.

Dick   - W6CCD

Thanks Dick. I suspected it was just marketing but thought
that they may have come up with some great new antennae or
something in the receiver that I hadn't heard about.

The most probable reason is that this is pure marketing hyperbole. The radios aren't better... they're just being quoted using more optimistic (and typically unrealistic) test conditions, so that they sound better than the old radios, so that they'll sell better.

>   What's
>the difference in the two radios to justify the increased

They *might* have more sensitive receivers, perhaps with a low-noise front-end preamplifier.

I rather doubt it, though.

>Increased sensitivity/filtering? Hype?

Probably hype.

I've read some reports that indicate (based on buyers' experiences) that there can be some very real different in useful range between FMS/GMRS radios of different types. This might be due to actual (vs. quoted) transmitter power, or to better receiver sensitivity, or to the use of less-lossy rubber-duck antennas, or to the presence of a more effective counterpoise within the radio.

I doubt, though, that all of these quality improvements, lumped together, would come anywhere near extending the range of a 2-watt handheld from 2 miles to 25 miles, under the same usage conditions. A 12:1 distance improvement would seem to require a 144:1 power or sensitivity improvement... over 20 dB.

25 miles, on 2 watts of UHF, pretty much requires that both transceivers be up on hilltops or high buildings, with a fairly clear line-of-sight between. You aren't going to get that sort of distance from ground-level to ground-level, unless you're lucky enough to catch a very fortunate reflection from something high up... the horizon will

cut off line-of-sight. Similarly, you won't get that sort of range
amidst city building clutter.

Ah, yes, but those repeaters do miracles. I've personally hit a repeater in Camas, WA from Salem, OR (about 60 miles) with an Icom IC-2. My best haul so far into a repeater though took 30 watts, from the top of Coxcomb Hill in Astoria, OR to a repeater on Mt. Scott in Portland, around 100 miles. But that was still not as good a trick as the other.

GMRS, FRS, CB and whatever are not amateur radio.

It amazes me that people can't grasp that, and continue to post such questions here.

Doing a decent search on the newsgroups would find appropriate newsgroups. Clearly you didn't, since you found this one and not the proper ones.

Doing a decent search would have found the same question asked, and answered, many times before. Chances are really good if you "chose" this newsgroup because you found discussion of GMRS in old posts here, the very posts that made you think the question was "on topic" was the same question, and if you'd just looked at the replies you would have had the answer without adding yet another off-topic question to the newsgroup.

Micheal,

Lighten up. They're more likely to get ACCURATE information from a ham NG than from anything devoted to those particular forms of two way radio, simply because there are many more hams that actually know the way things work and can give real life stats on what they're likely to do.

Well, EXCUSE ME Mr. High and Mighty Ham Operator.... woooooo
I'm just shaking here!

For your information asshole, I've been involved with
computers for the last 34 years and use DOS, WindoZe, AIX,
Unix, Solaris, HP, and pretty much any flavor of Linux you
can think of.

Searches are subjective and if you don't happen to enter the
right arguments you ain't gonna get the right answer. Shoot me.

I sincerely <choke> apologize for monopolizing your valuable
time.

To all of the other reasonable and helpful replies I
received, I thank you all very much.

Mr. Black can kiss my ass
--
Steve

The range of these units is dependant on:
1. Altitude of the transmitting and receiving units
2. Power
3. Frequency
4. Obstructions
5. Antenna Gain
6. Receiver Sensitivity

For a Handy chart to estimate range-- See URL:
http://www.artscipub.com/simpleton/simp.range.html

I have transmitted over a 50 Mile range with 5 Watts - but was on top of a mountain (like most repeaters)

At ground level for both units with standard antennas, range is a few miles.
Anything else is hype.
Pretty much the distance to the horizon -- see URL:
http://www.boatsafe.com/tools/horizon.htm

Power buys little extra range for unobstructed distance. Obstacles
is where power is inportant. I am not sure that 2 watts is maximum.
I was doing a test of a .5 watt Icom and a ~ 16 mi Midland. It
seemed to me the field strength was more than double. I
would think quadrupling power would double field voltage and I was
getting more than double field strength. .5 watt FRS have been reports of ~100
miles
between mountain tops. Nuts & Volts reported something like a 160 mi
skip of some sort in their FRS articles a long time ago. Ground level on boats
is normally about 3 mi., but air effects can increase that a whole bunch.
I don't know what mode of transmission I used to get when i
used my old 300 mw analog cell phone up around Lake Erie.

I used to go through a Canadian site in London from Astabula Ohio, about 70 mi.
That used to come in better than the US sites along the water at times.

Right now there are probably a high percentage of hams using
FRS, perhaps not GMRS. There used to be a GMRS and FRS forum
which is gone, but the ham groups is probably the best informed and
also the boating people. Sometimes people post to a group they are familiar
with, and not necessarily the best for answering the question.
They may respect the answers with people they

are familiar with. Perhaps they also are looking for another channel in case
normal
inspecting does not come up with results in a given time.
As always, your going to get all kinds of answers, but on Usenet, you
tend to get corrected in a short interval.

A person can search with any method they choose. Using search engines,
especially Google, is getting more difficult do to extreme advertising.
I'm not sure where computers came into the discussion, but I worked for Digital in
1969.

>Increased sensitivity/filtering? Hype?

With the "right" kind of propagation even .5W will do way over 100 miles but under normal
circumstances count on line-of-sight but no more than 1 mile when in build-up or bushy
areas. Your mileage may vary.

Repeater distances are usually line of sight (a repeater at 4.000 ft has a horizon of abt
80 miles if no obstructions in between. Draw an 80 mile circle around the repeater and
you'll get the area you can reach.

Note: There usually are obstructions (hilly terrain) and without any special propagation
signal strength at long distance will be less. Most FM type radio's do not have very
sensitive receiving stages and if squelch is on sensitivity becomes even less.
Solution:

Use narrow band modulation such as SSB. Instead of spraeding your .5W over 15kHz put it in 3kHz. You'll be stronger on the other end - however now we're talking how it works for ham-radio: Do a lot with little power.....

> Thanks for taking the time to read this. I know next to nothing about this topic, however, the radio is not for me. It's for my dad. He was very active in radios from around WWII thru the 50s. His job and family came first though, so I guess he had to let some of his hobbies go. Since he's retired and doesn't get around as well as he used to, he's thinking about getting back into radio.
>
> I think he got "sticker shock" when he looked at a trade magazine recently. I tried to tell him we aren't in the 50s anymore and he said "Yea, but dam they're high."

Based on articles, I've seen, the prices for a typical HF rig these days isn't all that much different from the prices for rigs back in the 1950s, once you adjust for inflation.

> My question is: How much should an 80 meter radio w/antenna sell for?

The cost for a usable antenna should be very modest, if your dad has room to put up a simple wire dipole in the back yard. You can make a serviceable antenna using wire and insulators available from any decent hardware or homebuilding store. $25-$50 in materials ought to do it, if everything is bought new, and the cost can be brought down to next to nothing if you have leftover wire from another project and/or are good at scrounging.

As for a radio... $750 would get an FT-857D compact (HF/VHF/UHF all-mode). $870 would get the FT-897D - essentially the same radio in a larger, base-type package. Other 100-watt HF rigs seem to start in the same basic price range... around $1000 is a common price point.

CW-only or lower-power radios are somewhat less. If by "80 meters" you literally mean the CW end of the band only - if your dad isn't a phone guy - then something like this might do? If he wants sideband and/or AM as well, then a full-function radio would probably be called for. The least-expensive new 75-meter LSB-only transceiver I know of at the moment is the MFJ-9475X, at $270, and it might not have the power or reliability that your dad would want.

>We're not talking top of the line here, but quality and reliability are important (as is cost).

In your place (and his) I'd seriously consider going with a used radio. They're not hard to come by, as active hams upgrade to newer radios and as old radios become available through silent-key sales and auctions.

Hooking up with a local ham-club would probably be a good idea. Putting the word out at a meeting or two that he's looking for a serviceable-but-not-fancy HF rig might very well turn up a few that people have sitting on their shelves. I'd expect that he'd probably be able to get something decent (maybe 5-10 years old) for perhaps half the price of a new radio of similar basic capabilities. Some of the ham-radio dealers have used equipment for sale (either radios they have accepted for tradein, or as consignment sales).

Local ham-radio fleamarkets, auctions on eBay, and online swapmeet sales on QRZ.COM are all possibilities. One has to be careful, though, to make sure that one is being sold a radio which actually works properly and hasn't had all of the Magic Blue Smoke escape. That's one reason I suggest a local (hamclub) acquisition - you'll at least know where the seller hangs out :-). Test the radio carefully before buying, or get an iron-clad right-of-return-within-30-days guarantee.

A few years ago I got somewhat lucky, and managed to buy a Ten-Tec 555 Scout with a bunch of band modules and a power supply for only $300. This is a 50-watt sideband radio with individual plug-in modules for the bands - a bit quirky but very usable - it was my HF-mobile radio for about three years.

If you adjust for inflation, the rigs of today are dirt cheep.

A typical Johnson Viking would be around $ 300 and a receiver would be around $ 150 to $ 200. That is around $ 450 to $ 500 in 1955. I was not aroung those years, and don't know what the typical wages were, but they probably were under $ 1.00 an hour. For around $ 1500 you can get an Icom 746 Pro that will do things only dreamed about in the 50's. I bought one in March for $ 1400 after the rebate and free shipping with the matching power supply. The Icom 706 is a lot less than that. There are several lowband transceivers out now that are about half that .   That would only be 4 to 5 times the cost of the 50's station. The wages now are probably 10 times that or more.

To top it all off most have more money left over now to buy things than they did in the 50's. I grew up then and many were lucky to have a used car about 5 or 6 years old. Now lots have atleast two cars and not too many are that old.

A rig to start (under/about 200$) for an absolute novice.

At the moment, no antenna is installed yet (I can't install it)
so I was thinking to something about mobile or a HT.

What do you suggest to get?

A VX-3R is a right choice?

Thanks in advance

Hi, My first radio is a Kenwood K2AT 2 meter HT. In my area 2 meters is where the local action is. Check with some of your local radio clubs and see which band is used most frequently.

Jim

For very accurate calculations of inflation, go here:

http://www.westegg.com/inflation/

What cost $300 in 1955 would cost $2173 in 2006 (the calculator
is based on the last completed year).

So a radio that costs $1400 today would have cost $193 in 1955
That Heathkit AT-1 transmitter that sold for $29.50 would cost $213
today - which actually sounds just about right to me - I would pay
that for an AT-1 'modern' kit were it available.

So all in all, things haven't changed all that much really in price terms.
But performance? Not even on the table - things we can do today in
a tiny space were not even science fiction in 1955, much less on the
radio store shelf.

But imagine if you could go back and order 2 or 3 of every Heathkit
from 1955 and stash them away until today. THAT would take care
of the inflation issue in a heartbeat on eBay! An unbuilt AT-1 today
would probably fetch $4000 or more...

Thanks for the inflation calculator. I was just guessing on the wages in the middle 50's.

That shows I was in the ballpark. Now about the least expensive transceiver is an Icom at $ 550. Add about $ 150 for a power supply and you have $ 700 in a rig that would probalby out do the Collins rigs of the 50's that could cost from $ 1200 to almost $ 2000.   The Icom 7800 at $ 10,000 would maybe equal the best Collins in terms of the adjusted inflation. As you said that rig would almost be science fiction in the 50's.

As far as the AT-1 , I was given one that was in a bad state of repair about 15 years ago. Didn't do anything with it, but about 5 years later I gave it to a friend that wanted one to restore. He did a very good job of it, even had the chassie replated. Hard to tell what e-bay would get for an unbuilt kit. If it is like some of the others, I could retire and lead a good life if I had a couple of each of the unbuilt Heathkits. Around 1973 I did put together some of their low end test equipment. Still have the VTVM. In the 80's I bought a SB-101 from a ham that had put it together in the late 60's. For what it was, it was a very nice rig. Wish I had that one back.

Does anyone out there know how to store the memory chnls so they stay stored. I use the M "WRITE" button and poke in the chnl # hopeing that 2 external AAA batteries will keep the stuff locked in, but next time pwr up again all the Memories I had stored are right back to nothing at all.

Joe

Read this thread and note that a ham is offering to copy the manual to some
who were inquiring.

   Although I frequently look for other sites,  I find EHam to be the best
over-all ham radio web site to browse regularly.   ( http://www.eham.com ).

   Does anyone else here suggest any other site with comparible quality and
breadth of topics?

See Alexa for Ham Site Ratings  - The most visited sites in all 'Amateur'
categories.
http://www.alexa.com/browse?&CategoryID=236
Best browse thru 30 or 40 of them and bookmark those that suit you.

Mega Sites with wide breadth of topics:
QSL.NET
EHAM.NET
QRZ.COM
ARRL.ORG
DXZONE.COM
N0HR.COM
AC6V.COM

Others in Alexa are specific such as DXing, Contesting, AMSAT, Data Sheets,
BoatAnchors, Manuals, Mods, RigPix, Ham News etc. Bookmark according to your
interests

Minor correction ED it is eham.net -- not dot com i.e,
http://www.eham.net/

BUT http://www.eham.com MY BROWSER WILL TAKE U TO http://www.eham.net/

Club has been on the web for over 3 months now and is growing at a
alarming rate. If you are into 10m or 6m ham operations then come
visit the clubs website. We are looking for writers and
photographers. We just had our first contest and conditions were
poor. But we did have a winner.

Xref: g2news2.google.com rec.radio.amateur.equipment:1193

Hi all,

I picked up five Motorola Astro Spectra VHF mobile radios at a Motorola employee auction here in Ft. Worth, Texas. I guess they were stuffed in the corner some where in the factory, because they're all still in their boxes. All have cables, speakers, microphones, manuals, and of course the radio itself, model D04KKH9PW7AN (see http://www.batlabs.com/astromob.html for what this means). All but one includes the trunnion mounting bracket. They include options G806AA (Astro Digital ?), G51AA (Enhanced Smartnet), W797AP (Encryption DVP-?), W544AK (3 db Gain Antenna), G133AB, and G239AC (internal options).

I've powered them all up and done some basic tests (buttons all work, PTT seems to work, speaker works, etc...). I don't have RSS or a RIB, so I can't program them, but there's no reason why they shouldn't work.

All are in new or like new condition: no scratches, plastic still covering the display, most accessories still in bubble wrap or plastic bags, etc.... The boxes are the original boxes, with serial and model numbers matching the radios.

Is there any interest in these before I plop them on E-bay? Previous E-bay sales have these going for $400-$500 each, but usually in an obviously used condition.

Email or call me at 817-231-7384.

Thanks,
Michael White

I recently purchased an older model HP8753 Vector network analyzer. It came with the reflection test set and calibration standards.

I have looked for some time on the net and cannot find any documents that describe how to make practical measurements.

Initially I want to characterise some passive components (caps etc) and I also want to be able to measure the unput impedance of an active device.

Can someone please point me in the right direction or maybe explain how I set up a test. I have seen responses in books showing the impedance of a capacitor and the self resonant response but when I connect a Cap to the test port on the reflection test set I can see the correct capacitance curve on the Smith chart display but when I switch to mag, the line is flat acorss the band. I cannot tell from the Smith Chart where it is self responant.

Thanks in advance for any help

Regards

David

ViewItem&rd=1&item=200168425941&ssPageName=STRK:MESE:IT&ih=010

Continuous 3.5-30 MHz, good for Amateur bands and serious SWL.

Rated 300 watts PEP, 150 watts CW, built-in Cross-Needle SWR/Power meter with 0-30 and 0-300 watt scales, measuring Average and Peak Power.

This tuner uses a T-network that is advertised to match 20-2000 ohm loads. Designed for Balanced Lines, it can also be configured for Coax lines and random long wires.

It might not "load the bedsprings," but should make your Xcvr happy in most other situations.

A decent 'TRUE' balanced line tuner. I own one and have it dedicated to my
IC-746 with a balanced feedline to a CF Doublet.

Not interested in buying this one, just posting an endorsement.

I'll second that endoresement - I, too have been using the MFJ-974H to feed my W7FG 80M Dipole with ladder line and it has been the best over-all antenna system I've had in decades.

Anyone have any experience with or knowledge of the DSO 2150 USB
Oscilloscope. I see it on Ebay and the price looks too good to be
true (Chinese-made).

I am just getting into homebrewing and can see a scope would be a good
addition to my DVM to help me troubleshoot projects.

I'd appreciate any feedback. All I can find on the web is the ebay
listings for this product.

I'm a little leery on this, but really am not familiar with this type of modern scope apparatus to offer any valid opinion on it. Personally, I prefer the older high quality units you can find on EBay for about the same price, such as a Tektronics 465.

On eBay: http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=320177560839

Check bellow what you are getting for one price!!!

Kenwood TS-450SAT Review at eHam : http://www.eham.net/reviews/detail/989
Lovely Kenwood. Superb condition. Tunes any antenna. Covering 160 through 10 meters including the WARC bands with 100 watts output. From Non-smoking environment.
---> with YK-88C1 CW Filter 500 Hz [8.83 MHz IF !!!
---> Power Cord
---> Instruction, external control & Service manual's!!!

Kenwood MC-60 desk mic Review at eHam :
http://www.eham.net/reviews/detail/1112
The Kenwood MC-60A has been a popular desk mic among Kenwood owners for many years. It has a communication type dynamic unidirectional moving coil type

mic element. It features UP-DOWN tuning plus a built-in pre-amp. There is a switch for PTT (push to talk) and also a lock feature. The mic impedance may be set for 50K ohms or 500 ohms. The frequency response is 150 Hz to 10 kHz (-6dB) with the Preamp off and 200 Hz to 7 kHz (-6 dB) with the Preamp on. The heavy zinc die-cast base provides extra stability. The mic terminates to a standard 8 pin mic plug. The preamp requires two AA cells which are mounted through the bottom of the base.

VHF Alinco DJ 190 Review at eHam : http://www.eham.net/reviews/detail/3076
Alinco DJ-191 Hand-Held 2m Transceiver with extra battery and antenna. Fully working condition!!!

DL4YHF Pic Keyer with memory!!! More info at:
http://freenet-homepage.de/dl4yhf/pic_key.html
Record & Play up to 2 cw messages. The Speed range from 20 to 300 letters per minute. With full manual and schematic.

I've been homebrewing for a couple of years now and have bought several scopes at hamfests for exactly that reason: they give you invaluable information.

If you can develop the patience, get your scopes at a hamfest (or see below) and be prepared to go to several spread out over at least a year.

Know what you want before you go. My work is all at low HF frequencies (below 5 mHz) so I didn't need high spec high bandwidth. You need to be able to ask the guys selling the stuff what the history is and be wary of vague answers. Some guys have inverters and will be glad to offer to show you that it works (go for it). A hint on bandwidth is what the time base will go down to. One microsecond per division means a megacycle (Hz to the newtimers), so the rolloff will decrease sensitivity at progressively higher freq. Be wary of dust level, loose knobs and shafts, a stickyness on the surface of the outside (as if it was in a restaurant oil frying kitchen for 20 years), etc. The problems I have run into with old used scopes is that they have not been turned on for 20-30 years, and within an hour or two of being on, burns out something and then its dead. Another problem I've had is jitter/intermittents (and not due to dirty switches, but you can have that problem, too). Be wary of scopes with a limited vertical sensitivity range (such as one Heathkit scope that goes 1x, 10x, and 100x). The older tecktronix scopes are excellent. I have the notion that the newer ones (being much more complicated) are hard to fix (and I've been inside some of mine). Look for manuals (particularly if you might think you will someday be fixing it) and that you might need a second scope to fix the first, or vice-versa. I remember the 564 series which had parts (and tubes) all spread out like crazy, but easy to find everything, easy to get a soldering iron in, etc. But, they can develop problems that are hard to trace, etc. If you have a chance to buy two, then you can use the second one for spare parts or signal clues when tring to fix the first one. I'd also consider, preferably, to see you do a google search for used oscilloscope dealers who will give you something like a 30 day warranty as a normal feature of the sale. You scope arrives busted, or craps out within the warranty, then you have a fallback.

This year I went to a bunch of hamfests. First hamfest, I bought two, one not so good and the other one crapped out on me. After several more hamfests and nothing or nothing I wanted, the last fest yielded five scopes for me, one old RCA (tube) and four Tektronix 5100 (three) and 922 (one) boxes and paid about $100, total, for all of them. Walk around and get interested
near the end; you will find guys who _really_ want to not take them home again and are lowing the price every 10-15 minutes. One of the five had serious problems and I'm saving it for spare parts, spare scope tube.

I also like analog VOMs better than DVMs.

I have several Motorola Syntors, Micors, with control heads, cables and all stuff. Let me know what you need and if you will pay shipping it is yours. I am cleaning out my shop and need the room. I will try and make a list.

Hi David,

You wrote:

> Initially I want to characterise some passive components (caps etc) and I
> also want to be able to measure the unput impedance of an active device.

When you measure a passive component, you may want to measure the
capacitor shunted on the transmission line. Consider, in your mind,
what will happen at DC and at infinite frequency when these two
different signals see this network. At DC, the capactitor is an open,
so we should have full power transfer, and at infinite freq, the
"ideal" capacitor is a short, so we should have zero transfer of
power. Obviously, this is not the case of a real capacitor. It acts
like a capacitor up until it hits it's self resonant frequency (SRF)
then it starts becoming more inductive as you increase in frequency.
You should see this on your log plot when you measure S21 insertion
loss with the capacitor shunted on a transmission line between ports 1
and 2.

Looking for an application (or applications running concurrently) or an approach to use a internet headset on my desktop or laptop for voice, while doing MixW (2.18) for Multimode operations. Ideally I'd like to use the soundcard output from the desktop or laptop for the multimode operation and be able to break-in with voice when needed - -

or for that matter use it as my default mode for voice ops (software
only - no rigblaster or similar hardware). Ideally I'd like to use
the line out as the method for input mic audio to my Kenwood 140S
(I'll trim the input for correct audio level with a potentiometer).

Has anyone done this with software apps only? And preferably using
MixW?

Thanks es 73's - KN0CK
Marty

What's the deal on VoiceMax? Was thinking of getting one myself for the noise gate.

I would hook it up to a signal generator with a calibrated attenuator first, just to make sure that you don't have a blown front end device. Also, you will be able to see how many microvolts are required to "move the meter". You should be able to easily hear a 0.1uV signal from the generator.

Pete

I am having difficulty getting my HP8594 to zero the trace at -80dbm on the screen. Even after i run the self calibration routine the trace is about 2 db above the bottom. Does anyone know how to zero the trace line so it sits on the bottom of the screen or do i have a problem

```
with my unit?

Greg

I'm in the market for a GPS gadget, but I can't seem to find one that
does everything that I want.  The new whizbang "turn left in 100
ft....50 ft....turn now" kind don't seem to have a Latitude and
Longitude readout for exact positioning.   What I know about APRS
would fill a book, but for the time being I'm mainly interested in
getting directions through some large cities and also being able to
report my exact position for HFTA antenna system purposes.  Does such
a gadget exist? Thanks for any leads.

I have For Sale aN SG-2000 ADSP2 (Digital Singal Processing) 150 watt HF transceiver.

This Unit is for both Amateur radio and Marine radio use.

It transmitts and receives CONTINUOUSLY from 1.8 Mhz to 30 Mhz with no gaps. USB, LSB, CW & AM.

The unit is electronically perfect, the front panel is perfect. There are a few scratches on the top of the case.

It comes with the mic, DC power cord, all metal base and quick start card. Updated manual is available for Free online.
I will ship internationally.

The price is $1,050 plus actual shipping charges.

You can email me at: w7gsa@yahoo.com (w7gsa at yahoo.com) or you can phone me at 904-821-5055 9am to 9pm eastern time.

For more detailed information go to: - - http://sgcworld.com/Publications/Manuals/ADSP2Head.pdf

Please email me for pictures.

I will also consider a trade for a 400 to 600 watt HF amp, like an SG-500 or similar.

Bill

Since I'm on the north side of Washington DC anyway that is a useful bit
of info. Trouble is I can't get there without paying a toll and driving
an extra hour. So it would have to be a really big ticket item to make
it worth while. But if I order on line into Maryland were HRO does not
have a brick and mortar store I can duck the sales tax and the toll.

All of the current Garmin mapping handhelds will do that.

For US buyers, out of the box, they have a crude "basemap" of the US with Interstates and major roads within cities, but you can buy detailed maps of north America for navigation.

https://buy.garmin.com/shop/shop.do?cID=145
http://www.garmin.com/cartography/

Even without extra-cost maps, they all show latitude and longitude and most have NMEA outputs for connecting to external devices.

I have a 76CSx that I'm quite happy with.

https://buy.garmin.com/shop/shop.do?cID=145&pID=351

I'm sure the other makers have essentially similar products.

That 11.2 ohm is what happened to mine.That will keep it from zeroing. Those precision wire wound resistores for that meter were a little hard to find.
Good luck.

   I would suppose that if one used some fairly high resistance wire, and
had the resistance / foot data for that wire,  that they could "wind"
their own 11.2 ohm resistor.   I may do that with my 260 some time.

   Ed

I would like to buy a good quality solid state 300 to 600 watt HF amp,
like an SG-500 or similar.

The amp should be in good to excellent condition both physically and
electronically, with full output power.

The amp can operate off of 110vac or 13.8 vdc.

I can pay you with a cashier's check, post office money order or
PayPal...which ever you prefer.

If you have one available, please email me at w7gsa@yahoo.com

Thanks,

Bill
W7GSA

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

 radio/personal-intro
 Subject: Guide to the rec.radio Newsgroups
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 9 Nov 2001 06:18:17 GMT
 Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated

maintainer at this time, rather than start auto-posting the original
article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

-----BEGIN PGP SIGNED MESSAGE-----
Hash: SHA1

I have a question for anyone who owns a Kenwood K2AT hand held and uses an external DC Power supply. Page 9 of the owner's manual says that the voltage must be between 12.0v and 16.0v (page 9) but does not say what the amps should be. I read somewhere out there that 1.8A should be used. However, the picture in the owner's manual shows a DC cable (the PG-2W) with 4A fuses. Other radio's use 3A, so I am wondering if the K2AT can handle 3A, especially considering that the PG-2W has 4A fuses in it.

Is 3A safe for my K2AT?

thanks,

Jim

You are not the only one to ask the same question.

The radio will only draw as much current as it needs. It is only the voltage that maters and it must be what the rig is rated for. The power supply must be able to put out the ammount of current needed or more. As long as the voltage is within the correct range, you could hook it up to a 100 amp supply if that is what you have.
You should have a fuse in the line rated at whatever the manufactor says. This will reduce the damage and save the wiring and power supply if something does gowrong with the Kenwood.

Think of it as hooking up somethin to the 120 volt AC outlet in your house. As long as the device is rated around 120 volts AC it will only take what it needs, be it a 5 watt night light or a 1200 watt heater or hair dryer.

Probably not with out some modifications.  The USA bands are usually wider
than other countries.  Many rigs will have a jumper or two that can be cut
or added to change the frequency coverage , especially the transmittter.

I don't know if it is permitted in other countries, but in the USA we can
cut the wires so it will cover more than we are licened to transmitt on.
Just can not transmitt there.  Other countries may be differant.

Possibly. The U.S. 2m band is 144-148 mHz, the U.K. is 144-146. Most radios sold in the U.S. are able to transmit on the entire band. It would work in the U.K., but there may be legal restrictions on importing them. At one time didn't the police use channels in 146-148 mHz?

70CM is different. The FM portion of the band in the U.S. is 440 mHz, in the U.K. 430. Some handhelds will transmit on both, some won't. Again there may be legal issues about importing a radio that transmits "out of band".

The other issue is repeaters. At one time all Euopean repeaters used a 1750 Hz tone to "unlock" them. This was transmitted to bring the repeater out of standby and during normal usage it was not needed once "unlocked".

U.S. repeaters never used the tone, if they used anything (and by now probably all do), they used subuadible continuous tones (CTCSS or the Motorola trademark PL). From what I understand the U.K. is moving over to CTCSS also, but you may encounter a repeater that uses the 1750Hz tone.

Just as an aside, check about 6m and 220mHz. Here 6m is not available for FM, and there is no 220mHz band at all.

Geoff.

Xref: g2news2.google.com rec.radio.amateur.equipment:1086

While sorting through my "collection" of junque microphones,
I found a desk-type mic with
 * a fairly thick and heavy base with
 * a four-wire cable,
 * an RCA logo on the front, below and to the left of
 * a plastic horizontal TRANSMIT bar, and
 * a sticker on the bottom which says (and sorta looks like):

        SHURE BROTHERS INC.
   Controlled magnetic microphone
        Model #MI-559156-1
   Made in Evanston, ILL., U.S.A.
      U.S. Patent D-198,850

In addition to the expected switch, the base also hides a one-transistor
something (presumably an amplifier).  By treating the "amplifier" as a
three-terminal device, the wiring was simple enough to trace:
 * two wires for PTT and
 * two for audio
and it did work with my HF radio, although the mike did NOT seem very
sensitive.

Does anyone have any information about this mike and/or the radio it
might have originally accompanied?  Since there is no provision for
an internal battery, I wonder if its radio supplied a voltage on one
of the audio wires?

All

I thinki take it from the responses that i might be better off not
buying a handheld in the USA for use in the UK. Given that most will
come with only 110v chargers and i will need to use an adaptor, the
lack of toneburst (albeit most repeaters now use CTCSS) and the
differential 70cms frequencies. The =A31=3D$2 makes the prices VERY
tempting and i could buy a top of the range handheld for the same cost
as a run of the mill one in the UK. Lastly, most of the warranties
would mean i had to ship it back if it went wrong.

Any other thoughts.

Andy

The Garmin NUVI 350 has a thorough street mapping system, voice prompts, and a mode where I am looking at my QTH right now as N43D 07'10.1" and W071D 26'58.8"

It sounds like it could meet your needs. It is pricey though.

W0PBV-

RCA used to make VHF/UHF NBFM two-way radio systems. I would guess that this microphone was used for dispatching with an older model base station.

You might check the Shure web site and see if they have any information on the model number. However, it may be a proprietary number for RCA.

The Shure Controlled Magnetic or Controlled Reluctance microphone elements came in both high and low impedances. You might do a simple 1 KHz impedance test on the element to determine which yours is. It could most likely be used without the transistor amplifier if it matched a radio's requirements. For example, the low impedance elements are about 200 Ohms, and work OK with Kenwood radios such as the TS-450.

The transistor amplifier is most likely to use a relatively low-output microphone element with a radio originally designed for use with a high-output carbon microphone. You didn't mention what HF radio you used it with, but some recent Icom transceivers use a similar arrangement with an amplified electret element. The low sensitivity you experienced may be due to the old amplifier requiring a higher bias level than the modern transceiver can provide.

Is there such a thing as a spectrum analyzer that feeds an oscilloscope
for its display, rather than having its own CRT display?

Yep, Tektronix marketed one built by Sony 15 years ago......

There are plans for one you can build in the August 1998 issue of QST.

Year and a half ago I bought Yaesu VX2R in the US - works fine in EU. Has 90-240V charger (just needs the pwr socket adapter), toneburst and switchable deviation. Warranty of course only 1 year, but at the US prices it's worth the gamble. If it died today, I would just pitch it and get the new VX3.

Have any of you seen the Kenwood SP-930 and SP-940 speakers side by side, and can you tell me the difference in appearance?

I'm just trying to determine if an SP-930 would be a good cosmetic match for my TS-940S, or should I look for an SP-940.

Also, do you know if there is any difference in the way they perform e.g. the filters?

Thanks...

Rich

If i could find a similar spec handheld BUT with a higher output than
3 watts that would be ideal. I was looking for something with 5-7
watts output and a decent battery life.

Thanks

Andy

Something like this maybe?

http://www.tti-test.com/products-tti/pdf-brochure/prec-tsa-2p.pdf

I had one for a while and although it did not have all the bells and whistles of its more expensive relations it was great to get a general idea of what was happening.

Next problem is that they are no longer produced but I have seen two on
Ebay in the UK in the last year, one was me selling mine, I recall it
went for about $250:00  �125:00

Good luck.

I have the Sony SA, but used a Tek 475 for a display. Works well for
simple stuff like Cable Tv and DBS/Sat Work, but if I need real Data
there is nothing quite as Good as a Good HP SA.......

Xref: g2news2.google.com rec.radio.amateur.equipment:1104

In earlier periods of my hi fi experience the issue of soundstaging
depth and precision[or good stereo effect] was never really an
essential part of my enjoyment of a system.

The more I have experienced though the more I have come to value this
as an absolute necessity iin terms of enjoyment and engagement.The
ability to hear all the instruments and voices as distinct entities
within a three dimensional sonic picture is enthralling stuff.Voices

and instuments should have a shape,not just a suggestion of a shape.

A recent experience with a friends ME 550 power amp trialled in my
system was a really interesting confirmation of just how getting one
component wrong in a system can completely destroy this illusion.This
despite all the other components being strong in this area.

Like very many transistor power amps the ME has absolutely no depth
to
the soundstage.I have been told that this is typical of amplifiers
which use lots of negative feedback and have high damping
factors.Many
CD players are like this too although they seem to have improved in
this area a great deal.The ME sounded remarkably like a cheap
Kenwood
power amp I used to run woofers with.Great bass but no imaging.Rotel
power amps I have used sound like this too.
Many of the digital type amps sound like this too although again they
seem to be improving.The latest Nuforce amps are quite good for
imaging precision and depth.

Amplifiers like the Supratek Malbec and Monduese [Wolcotts too I
believe] have variable feedback and damping factors.With these it is
very easy to fiddle with these adjustments to hear for yourself how
too much feedback and,to a lesser extent too much damping,can cause
the 3D imaging to collapse from something approximating a pyramid on
its side[pointy bit in front of your face] to a sausage with a
squashed middle section.

I think the tragedy is that many people never get to hear how
involving a stereo system can be when the imaging is right.This was
certainly the case with me until somebody sat me down in an front of
such a system.

I've got a Titan DX in Very good condition for sale. I've had it up about three years with no problems. Manual included $175 plus shipping or pick up in the Houston Tx area. Please reply to kc5tfl@sbcglobal.net .

Thanks
Steve KC5TFL

There are indeed adapters for that purpose.  Try
<http://www.radioinc.com/oscmax/catalog/product_info.php?
name=OPC-589%20%20ADAPTER%20CABLE%208%20PIN%20MICROPHONE%20-
%20RJ45&products_id=758>

All

Can anyone recommend a verical antenna that i can mount on the roof of my 3 story house that works from 80m upwards and wont upset the nighbours (too much). I have looked at various Butternuts etc but it seems like they only work well when ground mounted. Also keen to get one that is not to noisy as in a relativly built up area. I would not operate with more than 100W

I have looked at reviews on EHAM but they all seem to be mixed.

Thanks

Andiroo

Andiroo,
I had a bunch of very strong cable donated to me by the local NAVAL raedio stn. It was about 1/4" in diameter and included Ceramic bar insulaters etc. I had a 4" vertical aluminum pipe imbeded in concrete at the base. It was about 30' long and another slightly slightly smaller aluminum pipe which telescoped into the lower one. Total height was about 50 feet when fully raised. At the top I had a thick very tough plastic ring with wholes around the edges so I caould anchor the antenna wires to the insluating ring and then had 3 inverted vertical antennas all fed by RG8U Coax into a will insulated box. In other words 3 inverted V's you might call it.

They opposite end of the antennas were 1/4 " bronze braid wire.
One set was cut for 40 meters, one for 80 meters, and the last
for 15 meters. Coax feeders were cut to proper lengths for
best matching and lowest loss. The antenna worked fantastically.
All 3 bands and stood up with no breakage even during near hits
from several hurricanes and Kona storams.   Results were excellent.
I also had a 3KW roller coil tuner in the shack which permitted
tuneing to zero swr on all bands 80/40/20/15/10 meters.
As I said this material from NM0 site was real tough stuff.
The aluminum mast that supported it all was about 4" in diameter
and set in concrete block. Hole in side to put all the feed line
inside the vertical aluminum pipe. At top of the 4" pipe had another
3" pipe interleaved into the 4" pipe so could raise and lower the
upper section easily.   On the air results were fantastic.
The antennas faned out at the roof tie point insulators.
               If your lot is at least 50' by 100' its just
about what I have.
                    Joe/KH6JF (Honolulu, Hi)

SolderSmoke #66

October 13, 2007
FROM ROME!
Getting settled.
Summer adventures.
New shack.
Meeting W7ZOI in San Diego.
The speed of dark?
Iron Pyrite.
Wireless kids.
Noise cancelling headphones.
MAILBAG: Dennis OX3UR listening from Greenland,
Gary VK2KYP,
Paolo F5VMJ on NASA and tin whiskers,
Mike WA6ARA listening (with Zen)in
the high Sierras.

Tired of listening to the Arctic Monkeys or NPR on your I-Pod? Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack? Tune in to SolderSmoke!

RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.soldersmoke.com

All the programs are available here.

I hope you enjoy the program. Please send us feedback.

Would it be safe to connect my HT directly to a 12v car battery? If the
HT will only draw the amperage it needs, and the voltage is within the
specs, it should be safe, right?

Thanks,

I answered my own question. car batteries tend to have voltage spikes,
which would damage the HT. Just wanted to throw this out in case anyone
else ever has the same question.

Hi, I have a Yaesu FT-301D - digital hf rig.

Here is the problem... the rig works great but the digital display
does not work properly.
The display will only read out the following when on... example. 80m
reads 3.000.0, 40m 7.000.0   20m, 14.000.0 and so on When I turn the
dial the frequency displayed stays the same. No change or any attempt
to change its reading.

Ive checked the connections to the display boards, all looks ok.. As
I mentioend the rig works fine except for this.
Any suggestions ?

73 Mike

The FT-301D had a few issues with the digital display -- one which was overheating.

Post at Fox Tango (Yaesu User's Group)
http://foxtango.org/foxtango001.htm

Carol Maher is moderator and likely has the troubleshooting info you need.

Maybe yes, maybe no.

Some HTs require _less_ than 12 volts, and will be damaged by the higher voltage. This should be clear in the manual.

A car's electrical system as a whole is a less safe thing to connect an HT to than an isolated car battery, if the vehicle is being operated. A vehicle's voltage distribution system is subject to voltage spikes and surges (in particular, due to a phenomenon called "load dump" e.g. turning the lights off while the engine is running). Car electronics usually requires that the device be able to withstand a load-dump spike of up to 50 volts. Many HTs won't survive this.

The manufacturer-recommended "plug into cigarette-lighter outlet" adapters for HTs often include some filtering and spike suppression circuitry.

Hello,

I recently found this great transmitter, and went to great lengths to
get it out from the back of a huge old warehouse.

Unfortunately, the manual seems scarce.

I would like to buy, borrow, copy, etc.. the manual so I can fix the set. Usually a manual wouldn't be strictly necessary, but the set is difficult to service since when you slide any of the drawers out, it's instantly disconnected from the frame wiring! ha!

(Anyone got a "service cable" for it? Other owners of the URT-12?)

So, if anyone is kind enough to make available a manual I would appreciate it greatly.

Pictures of the set (I have not had time to clean the cabinet, sorry) are here:

http://www.bunkerofdoom.com/mil/urt12/index.html

I think it's a good piece of Coast Guard history, I'd like to restore it. - and get it on the air!

Thank you,

Patrick Jankowiak

Nortex Electronics
In Memory of Lewis E. Cearly Jr., Proprietor
Lewis Cearley, 84, passed away Friday, Oct. 5, 2007, at a local hospital. Funeral: 1:30 p.m. Tuesday in Greenwood Chapel. Interment: Greenwood Memorial Park. Visitation: 6 to 8 p.m. Monday at Greenwood

Funeral Home. Pallbearers: Gordon Callaway, Ed Forrester, Bob Martin, Ken McAllister, Mike Stroud, Jimmy Waters. Honorary pallbearers: Bob Carr, Bryan Goulette, Perry Hale, Steve Haney, Jerry McKinney, Robert Plum, Pete Pratt, Mark Rosso. Lewis was born July 21, 1923, to Lewis E. Cearley and Ina Carson Cearley in Childress. His family moved to Fort Worth in 1936. He graduated from Tech High School and joined the Navy in 1942. He served on the aircraft carrier, Tulagi, in the South Pacific, participating in three invasions, plus always dodging the kamikaze. Lewis enjoyed participating in squadron reunions. Lewis developed an intense interest in electronics at an early age; for example, he wired an entire house when he was 14. He started the Cearley Co. on Pennsylvania Avenue in 1954. In 1976, he established Nortex Electronics on West Vickery Boulevard, passing out advice, spare parts and good cheer until a month before his death. Lewis and Joy Cearley were married in 1967, putting an end to his happy bachelor days. They celebrated their 40th anniversary on Aug. 12, 2007. His stepson, John Watson, died in 2001. Survivors: Wife, Joy; sister, Sylvia Cearley of Fort Worth; stepdaughter, Kay Haddaway and husband, Richard of Santa Fe; stepdaughter-in-law, Brenda Watson of College Station; stepgrandsons, James Haddaway and wife, Shannon of Fort Worth, Keith Watson of College Station; stepgranddaughter, Dr. Kimberly Hill and husband, Jeff of Georgetown; and stepgreat-grandchildren, George Haddaway, Vivian Haddaway, Ethan Hill and Avery Hill. Published in the Star-Telegram on 10/7/2007.
Lewis was a great friend to many electroncs and photography enthusiasts and is sorely missed. Lewis was my very good friend. During the week of Monday OCT 15 through Saturday OCT 20, 2007, the store will be open to the public to make any final purchases.
It is strongly recommended to do so, as after this, the store will be closed and all goods will be recycled.
NOTE: Thursday-Saturday of the above week is a special and very final "garage sale" also open to the public.

Hello,

I have some problems with an Elektro-Automatik EA 3011 12V/10A power
supply. Does somebody own the circuit diagram of this power supply?
It saves me a lot of time from extracting it from the PCB.

Best regards,

Wim

HI
AFTER MANY YAER I TRY TO GET MY TS820 TO TRANSMIT AND IT WONT DO
H.V. IS OK
FILAMENT IS OK

TR REALY IS OK TUBES ARE OK
THAT WAS CHACKED WITHOUT THE TUBES
AND THE TUBES WERE CHACKED IN ENOTHER RIG
WITH THE TUBES INSTALED AT THE RIG DURING RX EVERY THING IS OK
AS I AM TRYING TO TRANSMIT IT IS BLOWING THE MAIN FUSE
WEN THE TUBES ARE IN AND THE HV IS DISCONCT FROM THE ANODS AND TR
SWICH IS ON, NO PROBLEM
DO TO THIS PROBLEM I INSTALL A 8 AMP FUSE JUST TO SEE IF I CAN LOCATE
THE PROBLEM
RESALT: TUBES ARE GETTING RED AND NO OUTPUT. IT IS LIKE A VERY BAD SWR
SO SUM HAW THE POWER IS STACK IN THE FINAL BORD
WEN I POOLED THE RF CHOKE FROM THE ANTENNA REALY I DID NOT DISCOVER
ANY GRAUND SHORT JUST THE 10K+1K OMS (R8+R1
DOES ANY ONE HADE A SIMILAR PROBLEM WICH WAS SOLVED
IS SOMEBODY CEN GIVE ME A SULUTION

Have searched high and low for an operators manual, no luck.
Service manuals are easy to find, but, not what I need.
Anyone have an operators manual?

I have most of it sorted out just playing with it but am not sure about a couple of things.
Found it at a hamfest last weekend. Nice little clock but would like to set it up correctly.
If anyone can help it would be appreciated.

Hello Jerry,
have a look on www.mods.dk , you can download the manual there.

Hi, I am trying to track down some history about this radio. I was hoping someone here may know something about it. I wanted to know what years Icom produced this radio and sold it new. And what was the retail price for new? I'd also like to hear opinions about the 735 as compared to other radios being sold new during the same time.

Thanks!

Jim

Go to Bob Heil's Heil Sound web site (under Amateur Radio) for diagrams on how to wire elecret elements to radios -- such as the Kenwood -- that do not have "phantom power" on the microphone audio line from radio to microphone.

QST normally reviews rigs shortly after they come out, and their 735 review (it's online at the ARRL website) is dated January, 1986. I bought my 735 around that date and still have it, although I'm using an Icom 7000 nowadays.

The 735 has a fairly "hot" receiver by yesterday's or today's standards. A good noise blanker. It's an excellent CW rig. If it's missing the CW filter the passband tuning will narrow the bandwidth to about 800 cycles. Limited memories, about 11. Two VFOs. All HF bands, including WARC bands.

Like all older radios, some of the proprietary parts are no longer made, and may be hard to locate anywhere. The optical encoder for the main tuning knob, for instance. Mine went bad; one technician couldn't fix it; another one did -- lucked out.

On the back of the radio, you can hook up a separate receiving antenna and a transverter.

It sold new in the $800 range -- it was considered to be a medium-level rig -- better than the cheapest, but below the big rigs of the time, like the Kenwood 930, 940, etc. I think it was discontinued in the early or mid 1990s.

Bob

Subscribe FREE to the K9YA Telegraph. It's FREE! It's FUN, It's ALL ABOUT
HAM RADIO!

November Issue Includes:

QSSS By Philip Cala-Lazar, K9PL

High-Voltage Capacitor Input Filter By Hal Mandel, W4HBM

Pikes Peak Pre-Field Day Operation By Paul Signorelli, W�RW/PM

Global Warming Down Under By Rod Newkirk, VA3ZBB/W9BRD

The "Good Old Days" By Duke Wahl, WA9WJB

Ham Quips By Dick Sylvan, W9CBT

The K9YA Telegraph is a free, monthly, general interest amateur radio publication read by ham radio operators in more than 100 countries. The K9YA Telegraph contains the stories and features most wanted by our readers, because it is written by them. An e-Zine, it is delivered monthly to your e-mail inbox as a full-color PDF file.

If you're in the mood for Morse, hankering for history, gluttonous for gear, ravished for a review, needing nostalgia, or just plain famished for fun, you'll find it in the K9YA Telegraph.

To download sample issues, subscribe or write an article, visit the K9YA Telegraph Web site. http://www.k9ya.org

Does anybody know if the Astatic D-104 will work with an old Drake T4X-C?
What are your thoughts on amplified vs. unamplified D-104 for this use.
Thanks, K1HL

The issue is whether the microphone output impedance matches the rig's input impedance. The D-104 is high impedance, it had a crystal cartridge though I don't know if that changed with time; I don't know what the input of the Drake is.

A lot of those built in preamps were about adapting to different rigs. If the rig has low(er) impedance, then a single transistor is one way to give the microphone a high impedance load while a low impedance output for the rig.

If you simply load down a high impedance microphone, you'll end up little output and a distorted frequency response.

> though I don't know if that changed with time;

There were two versions of the D-104. The most common one used a crystal
element. The other was a ceramic element. I once called Astatic and asked
if I should be using the ceramic instead of the crystal ones because
of my voice (lots of bass). The engineer I spoke to told me that
the expression "crystal clear" also applied to their microphones.

The ceramic elements were used in high noise environments and were
relatively rare.

I also have their 10-DA microphone, which uses the same stand but
has a dynamic element. They have been called the "best SSB" microphone
by many people.

> I don't know what the input of the Drake is.

You should probably ask on the Drake list, but AFAIK they are
high impedence and should work fine.

Lots of things can go wrong with microphones, the elements can age,
there may be hidden damage (or incompetent repairs), etc. It would
be a good idea to check to see if there is an amp in the base, and

if so, you might as well use it.

If not, I would try it without one.

Obviously before you use it for that once in a lifetime contact,
try it out on the air and see what people say.

You may not like the way it performs. I find they have too
much high frequency response and not enough low. My wife, who
has a much higher voice, has far better results.

Geoff.

All

I am after a FT-101 (one of the later versions would be most
desirable) from someone in the UK. Ideally it will have been well
maintained but no over modified / butchered. Any accessories also
needed. I fancy an alternative to my super slick Icom rig.

Email me if you have such surplus kit.

Regards

Andy

VoiceMax speech processor is not for everyone...
It's only for radio operators that want maximum range from their rig.
VoiceMax is no gimmick... it uses proven AGC technology to produce
tangible results. Want to know more?
http://tinyurl.com/2ac9r5

P.S.
Stop by Ebay and see what others have said about this revolutionary
new product.

Hi folks,
I switch after a couple weeks back from standard to remote MH-59 microphone on my FT-857D.
The functions on this remote mike don't work exept the red button to switch te set on and off.No DTMF,no light.
I change in menu 59 from normal to RMT but no luck.
Otherwise the standard mike do also not every function.
Up works,but FST will put set on and off and DWN does nothing.
Very strange.A couple weeks ago it will work.
At least same and both microphones works with all functions on my FT-897D.
Someone a sugestion?
tnx

Thanks for taking the time to read this. I know next to nothing about this topic, however, the radio is not for me. It's for my dad. He was very active in radios from around WWII thru the 50s. His job and family came first though, so I guess he had to let some of his hobbies go. Since he's retired and doesn't get around as well as he used to, he's thinking about getting back into radio.

I think he got "sticker shock" when he looked at a trade magazine recently. I tried to tell him we aren't in the 50s anymore and he said "Yea, but dam they're high."

My question is: How much should an 80 meter radio w/antenna sell for? We're not talking top of the line here, but quality and reliability are important (as is cost).

Any information, links, suggestions, opinions, etc. will be most welcome. Thank You in advance. TC.

As you said, it isn't the fifties anymore. No one sells rigs just for a single HF band, unless they are oddball, low power rigs without enough power to be useful.

Icom makes a low end rig, the IC-718, that offers 100 watts output that performs reliably and is very useable. Yaesu and Kenwood probably offer rigs in the same performance class at similar prices.

Today's currency (USD) is worth ten times less than the same currency in the fifties. Multiply old prices by ten to see what they would cost today. You will find that you are getting much more radio capability and reliability for your dollar today than you ever could have dreamed of in the fifties.

I am a newly licensed technician, study for the general exam. I plan to purchase an HF rig soon and would appreciate suggestions on a good starter rig. I am budgeting $800 for a rig and antenna. I would be happy with a good used rig but I am not sure where to start looking for information.

Thanks,

Jim KI6ISQ

If base is what you like a good small rig without too much cost could be a
Icom 718.
Big Readout, front fire speaker, built in DSP. Find one that has had the
AGC mod done to it if possible.
There is a recent Mod that is much better than the ones out there now.

Its not a bad unit without it.
Good TS50s Kenwoods are also a great rig base or Mobile. In fact its Noise
blanker is hard to beet.

Some used solid-state Heathkits are also very good.

Just a few.

Thanks for the solid advice. I went eHam and checked the reviews and these
are great suggestions.

Jim if it were me, I would first decide on whether your station will be base
or mobile or possibly both.
The same rig can be used for base and mobile - but in this case it narrows
your choice of rigs to the smaller compact ones.
If mobile and base, then two separate antennas are needed- one for the
vehicle - other for base use.

Decide whether you want an all solid state rig or can tolrate one with
vacuum tubes

Be aware that most recent rigs require a 12V power supply which for your
vehicle is simply wiring to the car 12V system, preferrbly directly to the
car battery. But for base use, a 12V power supply is needed i.e., 117V to
12V. Current requirements vary, but 12V at 25 Amps works for many rigs. So
another expense is a power supply for base use.

Next decide if you want to make your own antennas, saves lotsa money. Use
Google to look up "Homebrew Ham antennas"

If you opt for a commercial antenna, consider a used one and refurbish it.
Incude the cost of coax and maybe an SWR meter

After the antenna with the money left over, perhaps check e-bay and swap
listings for rigs in your price range.

Then check E-Ham reviews for what users have to say about the various ones
URL:
http://www.eham.net/reviews/products/14

So you need to make some decisions before anyone can recommend a rig and
antenna and keep into the $800 range
Base? Mobile?, Both?,
{Antenna, Homebrew , used, or new)????
Solid state or tubed, or hybrid??

Then repost

Jim

I am a newly licensed amaateur in the UK. I had similar budget to you
and looked around for a while. The Icom 706MkIIG was recommended and
is perfect. Its small, easy to slot in the car but performs
brilliantly from home even with a simple low cost half size G5RV and a
coliner for 2m.

Jim, I'm going to let you and the others here come up with a good solution for your HF rig....

My only comment is to spend your money on the radio and minimize the expenditure on an antenna. There is no reason you can not make a very good performing dipole, or inverted V type antenna with spending hardly any money on it.

73,

Ed K7AAT

That's just what the average cber wants. Makes em think they got a
"BIG RADIO".

I never left, Brian.

> your always good for a laugh.

I'm glad you're amused. But don't you think it's time for you to get a
job and relieve the financial burden on your parents and the Illinois
welfare system? If I lived in that state I would be outraged that you
are leeching my hard-earned tax dollars, but I don't. I guess people
over there prefer to coddle malingering basement-dwellers. You are
certainly lucky to live in a place with such generous folks, Brian.
Over here on the left coast you would have to support yourself with
gainful employment. And I hope that gives you something else to laugh
about, cause the thought of you actually working for your keep sure
leaves -me- ROTFLMMFAO!!!

BTW, where's that schematic?

This is the first time I've been to that link. The circuit he shows
with the two transistors is similar to mine. My feeling is that his is
needlessly more complex, but I'm sure it works. I also agree with his
statements about the diode method used for tracking. That method works
a little better than no tracking and is not worth the effort. This is
because putting two diodes in parallel never works right. One always
has a lower drop... and hogs.

Personally, I run a speech compressor. I doubt many of these idiots
could install one; apparently, they can't afford to have the local "cb
tweak" install if for them either.

Local, I kill the speech compressor, it is only for DX. Frankly, it
doesn't hurt my feelings they don't have one! <evil grin>

Keep up the sales pitch--few will be disappointed if they purchase one ...

Regards,
JS

John... good to hear from someone who has some experience with
processors.
I'm curious about the one you have. Can you tell me about it?

Have an R-2000 in great shape - asking 250 plus shipping.

Only reason for sellingis upgrade to JRC

Great receiver for the price - works great with no propblems

Get a free TV with no credit card. Follow this link and sign up where
it says Start Here. Then sign up for an offer I recommend ebay (or
FastWeb if it works on your computer) because you don't need to give
them your credit card # or pay anything. If you choose ebay create a
new account and bid 99 cents on something very expensive like an
iphone or ps3 so you are guaranteed to lose.

Good evening, Bill.

Is that a drop-in replacement for the Icom keyer board? That would be an
ideal solution... where can I buy the kit?

Yeah, bullshit. I've posted it four times over the years, and I'm sure
you've run across it in your quest for hackable designs.

> The circuit he shows
>with the two transistors is similar to mine.

Gee, what a suprise.

Let's see -your- design, Brian.

> I also agree with his
>statements about the diode method used for tracking. That method works
>a little better than no tracking and is not worth the effort.

Yet you used it in your previous amps. You even defended the design,
which is when I posted the link above. It wasn't long afterwards that
you came up with your last hack job.

> This is
>because putting two diodes in parallel never works right. One always
>has a lower drop... and hogs.

I don't see two diodes in parallel. Time to lay off the sauce, Brian.

Frank... I didn't say the diode scheme didn't work... I said it didn't
work well. Actaually, the Motorola RF Data Manual shows this scheme in
many of their designs... so maybe you give them a call and let them
know how foolish they are... lol
But seriously, the diode thing isn't worth the trouble unless you are
willing to hand-select components that go alaong with that circuit.
Even then, it's certainly not the best method. By the way... the diode
tracking scheme does try and use two diodes in parallel. Sorry you
don't see that... but that's how it is... and why it doesn't work
well.

TWENTY FIVE dollars for a 6 foot piece of mic cord and a pair of XLR's?
Are you fucking crazy?

I am looking for at least 2 of the 4 push buttons that push in for the NB,
ATT, PRE, AGC buttons that are mounted below the volume control knob on
either a Icom IC-725 or Icom IC-726 H.F. transceiver.
Please e-mail me at:
jackson17@cox.net

Thank you in advance.

Strange!

Have you guys now taken up knitting and crocheting?

Hmmm. I liked it better when you actually discussed electronic circuits!

So you claim it doesn't work because one diode will "hog" the current?
Well, that's the point! D1 "hogs" the current and establishes a fixed
voltage for the base of TR1!!! But alas, it only works if your ground
plane is 9 square feet.......

So where's that schematic, Brian?

Have a quantity of Test Equipment and Radio Communications Service Manuals, both Commercial & Amateur
Most of them are in Like New Condition.
Prices are reasonable...mailing may more than the manuals..depending where you live!

Please check my site: www.rodemi.com   for what is available.
Click on the MANUALS Heading.
I am updating the site as time allows.
> Just added a MAXON List...more to come <
I recently retired from the Commercial 2-way radio business and would like these useful manuals to find a good home.

Thanks for looking....Norm VE3CZI

You have received a lot of good advice. The icom 817 with dsp is a safe bet, but I would set some money aside for an antenna tuner and a power supply. A manual tuner with a cross needle meter is a good learning tool for someone new to HF that will also tune a variety of wire antennas which you can make (not buy.) Scout around for a used power supply. $800 should get you on the air.

What you really need is an "Elmer" in the Ukiah area. I am near Chico, but may be able to offer some help via email. Please contact me off-list.

How does the VSWR reading work on 2M FM?

I've had this rig for about five years, but never ventured into 2M-land with it until today, although I've used an IC-W32A HT with a rubber ducky for about the last ten years.

Yesterday built the dual band Jpole vertical from

http://www.arrl.org/qst/2007/03/fong.pdf

It works wonders with both the 746 and HT. I can hit all kinds of repeaters I could not with the HT and rubber ducky alone.

That's the good news.

The bad news is that despite good performance and reports, the VSWR reading on the 746 goes off the scale to infinity.

I know the antenna tuner only works at HF and 50MHz but find no such caveat for the VSWR sensor. Does it work at 2 meters?

73

Andy

As usual Frank you are missing the important point here. That point
being that you can't simply parallel two diodes... and have them share
currents. This would have to be done in order for any tracking between
the two. The problem is that one diode will always turn on before the
other... and take all current. Now I ask you... where is the sharing/
tracking in that scenario? The answer is: there is no sharing/
tracking... because one diode with the lowest drop will hog the entire
current... and the other diode will be off. this is why the gentleman
on the web page link that YOU provided says it that scheme works like
crap. He's absolutely right!

Amazing. Two major bungles within one month. First you couldn't
recognize a simple voltage multiplier, and now you show that you can't
even understand the basic principle of diode biasing of a transistor.

> this is why the gentleman
>on the web page link that YOU provided says it that scheme works like
>crap. He's absolutely right!

Funny..... he gives a different explanation.

BTW, where's that schematic, Brian?

NOTE: Crossposted to r.r.amateur.equipment AND r.r.a.boatanchors

The Rx100 scale on my old Simpson 260 VOM zeroes nicely, but the Rx1 scale won't zero even with new batteries. I haven't looked inside, but is there an internal pot or something I can tweak so it can be zeroed on the Rx1 scale?

|
|As usual Frank you are missing the important point here. That point
|being that you can't simply parallel two diodes... and have them share
|currents. This would have to be done in order for any tracking between
|the two. The problem is that one diode will always turn on before the
|other... and take all current. Now I ask you... where is the sharing/
|tracking in that scenario? The answer is: there is no sharing/
|tracking... because one diode with the lowest drop will hog the entire
|current... and the other diode will be off. this is why the gentleman
|on the web page link that YOU provided says it that scheme works like
|crap. He's absolutely right!
|www.telstar-electronics.com
|
|-------------

Bovine excrement. Ever heard of equalizing of current through a series
resistance? Often called a ballast resistor. Used quite often in power
transistors where there are several base/emiter pn jumctions.

No Brian

He is quite on topic. You are failing to comprehend a very simple
basic understanding of the biasing of a transistor.

Check the resistance of your test leads. They may be more resistive
than the meter has zeroing range.

Also check the battery terminals, sometimes if a battery is allowed to
leak it will wreck the low resistance contact that is necessary for the
Rx1 range to work. The battery is sourcing pretty high current in
this range.

The topic is the concept of using a diode to bias a transistor, a
concept understood by any first-year electronics student.

But not you.

The BE junction stays at or above quiescient current BECAUSE the diode
is hogging the current. It even says that in the article (that you
obviously didn't understand).

Two diodes..... sheesh..... I'll bet you've never seen a Vbe curve,
either.

>You have suceeded... end of conversation with you.

Well, since that's the closest thing to an admission of ignorance that
you are capable of, I'll take all nine square feet...... ROTFLMMFAO!!!

Put a really good short right across the banana sockets and see what
happens.

OK James... less not discuss ballasting... because that has no bearing
in this particular discussion. Maybe you can tell us how the diode
method of biasing shown at http://www.ifwtech.co.uk/g3sek/tr-bias/tr-bias1.htm
(bad circuits section) works. And since you think that circuit works
well. Please tell us why.

It could be a bad contact on the battery holder or the range switch. R X 1 uses a lot more battery
current than R X 100 so that small internal resistances matter. The usual case is that someone
attempted to measure voltage on the R X 1 setting. There are probably burned resistors in the
ohmeter circuit. There is no internal adjustment for R X 1, AFAIK.

No, it's either a (very) bad connection - or quite possibly a cooked R16
- check it - it takes a beating in 260s (should be 11.2 ohms)...

regards,

Hello everyone,

I have found two devices which look like gunnplexers, but without a mixer diode.
Well, actually, it only looks like a diode in a cavity to me, because I do not

have sufficient experience in microwaves. If anyone could tell me more about it, like what it could be used for, I'd be glad to know.

Pictures of that 'thing' are on the following website:
http://bram.ch.eu.org/galleries/?gn=gunn

On the fourth picture, you can see the diode symbol printed on the white cylinder, at the left.

The two diodes on the top are presumably zener diodes, and they have an orange marking on the edge, followed by a brown and a violet one.

Dimensions are:
- cavity: 1.9cm x 1cm
- depth (exterior): 4,2cm
- wall thickness seems to be around 2mm, but I have no way to measure right now

I'm looking forward to becoming active on 10GHz, and have found some nice websites explaining the basics of Gunnplexers and the like, with needed circuitry to get them working. But all of them are more complex than this device.

Thanks in advance,

kind regards, 73's
de HB9EGM, Matthias

For an HF beginner, I'd recommend staying away from low-power QRP or
used rigs.

A good 100-watt all-band rig, brand new, would be something like the
Icom 718, a little over $500. Add a 25-amp Astron switching power
supply for about $130-150. That leaves you about $150 for a soldering
iron, the ARRL antenna handbook, some wire and coax, and a few other
odds and ends. Wouldn't hurt to get an inexpensive MFJ antenna tuner
with a cross-needle SWR meter. Build a dipole and you're on the air.

Or get a TenTec Triton IV (aka 540 w/ analog dial or 544 w/ digital dial) and TenTec power supply; maybe $250 for the pair? Mid-70's "no tune" (that means you must have a "tuner"!) transistorized radio made in the USA. Or run the radio from a 12-volt battery with a $10 float charger from Harbor Freight; instant emergency power! Get a good crossed-needle SWR meter but make your own "tuner" (a homebrew inductor, a capacitor from an old radio, and two alligator clips). A 100-150 watt soldering GUN (irons are usually too small for soldering PL-259 connectors) will be handy (although you COULD buy ready-made coax). Throw some wire into the air (or connect to something metallic, preferably high and long), and you should have several hundred dollars left over.

Unfortunately, half of the first PDF schematic on that page is UNreadable,
but the SEARS repair manual has a very-readable schematic!

Thanks to all who replied for the help!

Does anyone know where I might find a schematic and instruction manual
for the Simpson 650 add-a-tester (transistor testor) for the Simpson 260
VOM?  <http://www.simpson260.com> had only a picture of the 650, but no
schematic or instruction manual.

W7FG has it
http://www.w7fg.com/manuals.php?manufacturer=Simpson&center=

Also A.G. Tannenbaum, LLC
http://www.agtannenbaum.com/s_cat.html

Doesn't specify if includes schematics -- ask them

Very likey what you have is a Gunn Diode Cavity Oscilator, used as a Local Osc. in an Xband Radar and like equipment.

Hello, I have for sale a IC-756 Original. It is in perfect shape and works flawless but has the horizontal lines in the display which is a common problem with this model. I am the original owner and a non smoker. The only problem I have had with this radio is a motor in the antenna tuner quit and it was easily replaced. The radio has full output and works great. It comes with the stock mic. If you are interested or would like me to email you some pictures please let me know. The price is $600 plus $10 for shipping. Please remove NOSPAM from my email address. Thanks, Mike

|
|OK James... less not discuss ballasting... because that has no bearing
|in this particular discussion. Maybe you can tell us how the diode
|method of biasing shown at http://www.ifwtech.co.uk/g3sek/tr-bias/tr-bias1.htm
|(bad circuits section) works. And since you think that circuit works
|well. Please tell us why.
|www.telstar-electronics.com
|------------

Actually quite simple if you understand nodal analysis. Per Kirchoff's Laws the total current leaving a node must equal the current entering a node. The particular node that is of interest is in bad circuit A, is the junction of VRI, D1 and the base of the transisitor. For DC analysis the cap is an open circuit and the RFC is essentially a short. The current through D1 is set by the value of VR1, the supply voltage and the internal pn junction of the diode. The voltage drop across D1 is determined by the current flowing through the diode. In turn this sets the Vbe voltage of the base/emmitter PN junction. The instantaineous base/emmiter current varies with RF drive level. Should this current exceed 1/10th the current through D1, then D1 starts to loose regulation. This is the basic workings of a shunt regulator. Any good first year tech should know this.

For either circuits, bad A and B, to work properly, the D1 diode current should be ten times the peak instantaineous base current of the RF power transistor. This type of biasing is good for low power RF devices. When dealing with large power devices, ie in the 100W and more class, this is not a good bias as the wasted heat in VR1 and D1 is very inefficient and prone to failure. Also there is no protection should a voltage spike on the DC supply propogate through. Most bipolar RF device do not like more than about 4 VDC base/emmiter voltage. Both circuits have no provisions for limiting the bias voltage in such a manner to cause permanent damage to the base/emitter junction.

|Holy shit..... Brian flunked first-year techie school!!!!
|
|-------------

I am not sure he got far enough to flunk first year. Maybe after teh
first half of the first year. Yes he seems to not understand a basic
shunt regulator circuit or Kirchoff's laws.

I have for sale an SGC SG-2000 ADSP2 (Digital Singal Processing) 150 watt HF transceiver.

This Unit is for both Amateur radio and Marine radio use.

It transmitts and receives CONTINUOUSLY from 1.8 Mhz to 30 Mhz with no gaps. USB, LSB, CW & AM.

The unit is electronically perfect, the front panel is perfect. There are a few scratches on the top of the case.

It comes with the mic, DC power cord, all metal base and quick start card.

I will ship internationally.

The price is $1,150 plus actual shipping charges.

You can email me at: w7gsa@yahoo.com (w7gsa at gmail.com) or you can phone me at 904-821-5055 9am to 9pm eastern time.

For more detailed information go to: - - http://sgcworld.com/Publications/Manuals/ADSP2Head.pdf

Sorry for being off-topic, but the heath/zenith NG seems to have died.
Does it help if I have an expired ham license? :-)

I have need of an RS-232 terminal, and I know that
my H89 (with no floppy--boat anchor!) contains one.

Can anyone point me to details for disconnecting the
H19 board from the CPU board and connecting it instead
to the DB-25 on the back?

(Even better, connecting it directly to a DB-9 which I'd have to buy)

I need it to configure a Sun Ultra, since I don't have a Sun monitor.

Thanks

What is preventing you from using a PC (desktop or laptop) or a Mac running a terminal emulator as your console terminal for the Sun WS? That would involve somewhat less work than converting the H89 and you would have the benefit of emulating a terminal type appropriate for the Sun serial console.

Regards,

Michael

None of my Macs have RS-232 (though of course I can get a USB converter)
But I do have a Kubuntu box with RS-232 which I could hook up with a
crossover. However, if it didn't work, I wouldn't know whether to blame
the Sun or my emulator config.

Plus, without a floppy drive, the H89 is useless, so this gets
something out of it.

This is from vague, 27-year-old recollection.
There are two boards in the H89. One of the boards
is the computer, the other is a terminal. The terminal
board is the one attached to the actual CRT, the computer
is attached to the (100KB, hard-sectored) diskette drive.

The computer and terminal are attached with a single
cable with perhaps 5-7 lines using standard RS-232
levels. You just need to pull that cable off, figure
out the pinning on it, and make a replacement cable to
connect to the DB-25. I can't remember well, and I advise
proceeding with caution, but I very vaguely recall that
maybe you could move the cable that connects the computer
to the DB-25 to the terminal board, after removing the
cable that connects the two boards together.

You've got some vintage hardware there ;-)

Indeed, using the terminal portion has merit, but why not also add the missing floppy (I presume it is just the 5 1/4" drive that you lack)? Look in dumpsters, curbside, surplus and thrift stores for any old XT-clone to rescue a full-height floppy ;)

I'm trying to realize a simple RF power oscillator to experiment RF
induction for educational goal. I found a lot of amateur radio
transmitter schematics but my goal is something of more easy because
I don't need of modulation, antenna matching and so on. My ideal
scheme
is an equivalent of "one tube Colpitts oscillator" but using a power
mosfet ot transistor. My friend told me that there are "4 watts RFID
reader working at 13.56MHz" scheme, but I found nothing in the web.
Someone can help me?
Thanks in advance for your attention,
Antonio

All the software is gone--damaged by two many years of garage and basement storage, and I finally got up the courage to discard the remains.

Also, the "hard-sector" disks these things used are not as easy to find. I actually have some old Wintel boxes with soft-sector drives.

My H89 drive is not actually missing--it is "out-of-alignment" and I don't have the tools to fix that.

There's anyway no particular value to me any more in running HDOS or CP/M. It's been too long--I grew accustomed to AmigaDOS, and then to MacOS 9, and now Mac OS X (with Solaris, Linux, and FreeBSD for off-loading non-user-interface tasks)

Hey, an alternate idea: Anyone in northeast Indiana want to bring over a serial terminal long enough to reinstall and configure Solaris and Kubuntu, and take what's left of the Heathkit as my inadequate "thank you" ?   :-)

Hmmm. That's probably correct! In fact, if I recall correctly,
there are both DCE and DTE connectors on the back.

Thanks, I will definitely look into that!

> You've got some vintage hardware there ;-)

Just call me cheap. The vast majority of the computers
I've had cost less than fifty dollars each.

Hello, I have a very nice Garmin GPS III Plus GPS Receiver with
Garmin Mapsource US Roads and Recreation CD, Magmount external antenna
and cable to plug into the PC. The price is $170 shipped for all.
Please email me if interested or for pictures. Thanks, Mike

All

I am visiting Bethesda Maryland later this year and wondered what
amateur radio stores there are (if any) in the locality i.e. Northern
Virginia, DC, MD, Baltimore etc?

Interested in picking up a bit of kit to make use of current =A31=3D$2

Thanks

Andy

In 1939/40 I had a ham radio called the "HOWARD".  It was a
store bought receiver and quite good at the time.

Check www.hamradio.com for their store in Woodbridge VA. What you may consider is going
to the store, ordering and have it shipped to an out-of-state address (like to your hotel
in MD or DC). There is no sales-tax on out-of-state shipments but there is on store
delivery. Sales tax rate 5%.

I see the SplatterMax is going down the same path as your amp; drop
the price bit by bit until you finally accept the fact that nobody
wants your junk, justify it as some sort of economic viability issue,
then beg the groups for new ideas.

Maybe you should just start the brain-picking now. That way you could
have your next magical CB accessory on the market before you run out
of "buyers" for your current entrepreneurial fiasco.

not too scientifically i cured a noisy gen   i read some articles i
think in qst about a ham that tried to do same w/a noisy car

i took rfshielding tape around all the wires  made a 'rf' proof can  to
shield stuff i thought  would radiate  super grounded everything
properly including the gen frame  and i also made some rfabsorbing
sheetmetal like plates to cover the gen   execpt for air/exaust which
had a little copper screen hinged door flap  the shielding was mostly
scrap  so it didn't cost much  and kept the basic weight and size of the
gen same since it had a pipe like frame  and the shielding i hung inside
that

you can try to see if there is a particular 'thing' in the gen that
radiates   , spark plug?  it's cable?  the inverter?  if it's mostly one
item perhaps you can just shield that/??

best of luck

Lot of vintage electron/ vacuum tubes:

RCA #6AU6 x2 (1 in orig. box)
RCA #6HZ6
RCA #6JC6A
RCA #6GH8A x4
RCA #6AQ5A
RCA #6SN7 GT
RCA #5Y3 GT
RCA #3A3A
RCA #5U4 G
GE #3A3C/ 3AW3 (in orig. box)
GE #6GH8A
Tung-Sol #12AU7
Sylvania #6BQ7A
I don't have a tester, so I haven't tested them.
All 17 tubes for $15
Please email me at mrsparkle48045@yahoo.com
thanks!

you *still* haven't responded to my query about acquiring a test unit to
compare to other manufacturer's brands.....
btw, that feedback number looks rather low for someone "making a profit".

I've acquired a second hand FDK multi 700 E 2m FM transceiver, and I
am having problems with TX. RX works fine, but I've received reports
that the radio is just sending an unmodulated carrier with no audio.
As I'm new to radio, I was wondering if anyone has a copy of the
manual or circuit diagrams for this radio so that I can check I am
using it correctly, and if the mic I have is compatible.

A few years back, I ran into a fellow who was familiar (he figured it out)
with this procedure. I think he was from Texas.
Is there anybody who knows how to do this? Unfortunately, the service manual
doesn't explain the adjustment sequence.
Thanks!

Pete

I recently bought a used Yaesu FT-212RH, in very good condition, everything seems to work fine.
Though the S-meter is a somewhat odd or very, very stingy.

When talking to people simplex, the s-meter (bars) either dont show any signal strength at all or very little, even when the simplex station is strong. When listening to repeaters the s-meter bar lights show up in varying signal strengths, so I know the S-meter does work.

Does someone have a service manual or know how to adjust this S-meter.

Thank You

i'm also an owner of that amplifier and i also didn't find any reference
in the web.

Please send to me any info you will find, i will do the same....

73 Stefano, IK2QED

I have repaired the receiver..........if anybody needs any help with their unit, feel free to e-mail me directly. I think I will post the alignment procedure up on the WRL website once I get everything aligned.The actual problem turned out to be a broken connection from the bifilar wound RF output transformer.

I really like my Icom 7000 -- variable digital filters and noise
reduction and auto notch etcetera makes listening a lot better than on
my older gear. And, of course, it transmits, too :-)

Laugh all you want but clearly you don't understand what you think you understand.

We are talking "communication" systems here not hi-fi. If the intelligibility improves faster than the distortion due to instantaneous peak clipping then that is a net positive.

As an aside, I actually did myself a disservice by defining the onset of clipping at the point where a 3 dB input change gave a 2 dB output change. This is actually quite a bit of clipping, which means that my "15 dB" clipping is considerably higher.

At the usual operating level, distortion is much lower. Furthermore, following publication Schureuer offered some justified criticism over my use of the Plessey IC. This device was a source of some of the distortion, which is actually multiplied by the subsequent clipping process.

I later built a discrete compressor using a linearized FET as the gain control element and also incorporated noise gating. Operationally, the distortion was negligible and the performance was phenomenal.

But back to you.

Your (actually Analog Device's) circuit is an AGC system and cannot limit instantaneous peaks. So following compression of a big peak, the amplitude of subsequent signals is reduced. This is helpful in preventing overdrive of subsequent stages and provides a marginal improvement in "talk power" but it is nowhere as effective as true peak clipping.

Sorry, those are the facts.

BTW, the Kenwood TS-870 (which I use) is widely acclaimed for its audio quality and is arguably the most sought after rig by the "hi-fi" SSB garglers.   It uses split-band speech clipping.

Hello group,

I have a VHF/UHF power amplifier, model WSE WL-2770D and am strugging to find any details. I couldn't find any references through google.

Thankful for any hint

We know, it has been ripped apart on this newsgroup a few times. It's not a good product. If fitted without using the correct alignment procedures and test equipment it will ruin performance and cause splattering over the bands and generate harmonics. Not many people who have the "really loud = really far" mentality will know how to use test equipment, they tend to be the ones with a lack of knowledge. Maybe the type who believe polishing the aerial will lower the VSWR!

The circuit has no RF filtering for a start, it is not screened in any way, it has a light that you will never see once the radio is put back together and it will have no benefit over the microphone that was designed to operate with the radio. It will cause distortion and harmonics unless the radio is realigned using test gear. If you use that on AM/SSB you will sound terrible, it is a waste of time. There is no way that the circuit differentiates between a voice and background noises, so raising the level many times and keeping it at 100% will mean that the sound will just be a "noise". Compare that to a normal mic, audio nearer to it such as the operator voice will be louder than what is in the background.

The product is out of date, has no market and probably would have been better 20+ years ago.

I certainly wouldn't recommend it, from a radio engineers point of view.

  Just like so called Engineers, your a dumb ass John.
Your are an Engineer? What a Trash truck radio Engineer?

There is a noise gate built in. Read his Good web site.
 Just wondered on what happened to the Power amp He had.

The SkyWave 2879ABTC was discontinued because of a poor profit margin. We hated to do it... but with the temperature compensating biasing... and all the premium components and chassis... it was just too costly to manufacture. Unlike other companies, we will discontinue a product before we will cost reduce it to a point that sacrafices quality and reliability. Sometimes I just go back and look at the photos... just for old times sake... http://www.telstar-electronics.com/default_files/SkyWave2879ABTCPhoto.htm

I was composing a point-by-point response to this when I had a power
failure and lost it. I'm not about to redo it, but let me summarize.

I am no fan of Telstar and his spam marketing on these groups and many
of his claims are BS.

That said, you seem to know little more about the subject than does
he.

BTW, to see the performance of this thing without the hype:

Wes, I'm curious... what is this "hype" you are talking about? I would
like to address that directly.

John Doe and Deek are full of shit,Deek is saying that if you compress audio its distorted, He is full of it.
Deek if you run a 300 or 1000, or 3000 Hz signal into a good compressor, since the circuit its only a controlled gain amp, the sinewave will come out not distorted. Thats like saying that a volume control will distort the audio. This is why I dislike EE, they think everybody should bend over to them because the got a degree. Hell I have seen some EE that could not tie their own shoes. You said you served as Chief Engineer on a major Military System, does that make you special, it that why most programs are full of the blind leading the blind, costing us Millions.
I have seen many like you and notice if they ever brag about how smart they

are usally means that they are full of shit trying to impress the
one without brains.

I conclude that the VOICEMAX issue has died, has had the funeral and now should be buried.

Those who advocate high distortion levels and poor quality signals can spend their $$$ and buy it.

Those who prefer low distortion and clean sounding signals won't.

Let the trip to the cemetery begin.

Thanks for your conclusion. Maybe you should contact the engineers at
Analog Devices and explain to them that their SSM2166 chip is just
plain no good. I'm sure they'd be happy to hear from you... lol

> since the circuit its only a controlled gain amp, the sinewave will come
> out not distorted.

Simple test. Use a dual channel oscilloscope.

Display the input signal on one channel.

Display the output signal on the other.

Normalize the gain at one frequency, and don't touch the gain for the duration of the test.

Adjust both traces to overlap each other.

Insert a swept frequency audio signal into the device. If the two traces are not identical, the circuit introduces DISTORTION.

A brief course in Fourier transforms will convince you that a distorted sine wave signal is still a series of sine waves, the fundamental, the 2nd, 3rd, 4th harmonic, etc. The existence of those harmonics is by definition DISTORTION.

Your choice of expletives indicates either: you are losing the discussion and have decided to shout louder; or, you are still in need of further intellectual development. I recommend you spend 4 or 5 years earning an EE degree from an accredited university.

You may desire distortion for some purpose, but it is still distortion.

I'm surprised at you... being a chief engineer and all... you should realize that in this audio application we're talking strictly about harmonic distortion. After all, that's what you can hear. In the Analog Devices datasheet (page2)... this is given for the SSM2166 as "Total Harmonic Distortion including internal chip noise" of typical

0.25%... and a maximum of 0.5%. These figures rival the finest audio equipment!

Which for radio voice comms does not matter all that much.

First why don't you address the spam marketing part?

Then you can simply look the word "hype" up in a dictionary.  It's a
simple word with a more precise meaning than "fuzzy audio", for
example.

So a bandpass filter for example is a distortion generator?  Better
tip off all of those BC stations and recording studios that are using
equalizers.

I see. So a perfect sine wave run through a perfect clipper will
generate a 2nd harmonic?

Ignition noise is not the only way a generator can interfere with radio reception.

A Honda "inverter" generator was used at this year's Field Day, but it caused a broad-band noise on the HF bands. Locating the generator as far as possible from antennas helped.

An inverter generator produces 3-phase AC power, rectifies it and drives a DC-to-AC inverter that produces 60 Hz power. Result is a lighter-weight generator, and greater efficiency can be achieved by reducing engine speed when less power is used. Honda's also have extremely low acoustic noise levels.

A call from the Honda dealer to Honda Technical Support received a reply that you have to use a LONG extension cord because inverters generate radio interference! I have since used a portable AM/Short-wave radio to check the Honda generator as well as one from Yamaha. Both wiped-out reception up to the 18 MHz range of the radio, when the radio was within several feet of the generator.

Does anyone have experience cleaning-up the interference from the inverter in one of these generators?

I don't know, but short of a lot of filtering (and figure X db power losses from the filter) and sheilding might help.

I was annoyed by these lightweight inverters that are basically souped up switching power suplies (even the ones in computers are cleaner), but I finally bought an old dynamotor from Fair Radio Sales (Lima, Ohio) that ran 24 volts in (two deep cycle marine batteries in series, here) and nameplate output is 117 VAC at 60 cps, max 300+ watts continuous duty and about 600 watts input, DC at 24 v, and 25 amps. It is very very clean and I can hook up radios and just about hear no RF noise. It even runs at 12 vdc input and reduced output voltage, maybe 50-60 volts ac, but sounds like a lower speed, too, so maybe like 40 cycles per second.

If you get one (they are about $75 now), you need to spin the commutator a few times to wipe off the copper oxide build up, then it takes off like it should.

So, if you have 90-95% efficiency in a inverter-generator, and build a RF filter that causes--assuming--3 db insertion loss, you're ending up at 50% efficiency anyway and you still have to worry about resonances, impedances, power handling, inductances, capacitances, etc.

Your other option is just run all solid state gear off batteries (and solar cells?) if you want no noise and simplicity.

I have a Brand NEW SGC MAC-200 200 watt Automatic Antenna Tuner I
bought for a project a couple months ago. The project was canceled and
the tuner was never used.

This is a 200 watt Automatic Antenna Tuner that has inputs for 5
antennas. The tuner will either automatically find the best antenna or
you can switch the antennas manually. The unit is about two months old
and the one year warranty is still in effect. The unit requires a
small 13.8 vdc power source. I will find one and include it at no
extra cost.

This is a great companion for the SG-2000 or the SG-2020
transceivers. Click on this link for more information on this unit -
http://sgcworld.com/MACProductPage.html - .

I paid about $269 for it and I will sell it for $239 plus 9.85
shipping in the lower 48 states. Alaska, Hawaii and International
shipping is more. It comes in the original box with the manual.
Please contact me at: - iamw7gsa@gmail.com - .

Thanks, Bill.

Why on earth would you put temperature compensating components
into this product. As far as I know no other doorstop on the market
uses them.

Absolutely! The output does NOT replicate the input. That is distortion!

Your definition of distortion is limited to harmonic distortion. There are other forms of distortion that have been used throughout the industry for years.

When the output does not faithfully replicate the input, including any gain factor, it is distortion. So, a bandpass filter absolutely introduces distortion when it is used to exclude components of a broad band of signals.

Better
> tip off all of those BC stations and recording studios that are using

> equalizers.

recording studios know exactly what they are doing. they are selectively distorting the audio to achieve a desired effect. See my other post on this topic.

In the general cse the distortion products for all frequency components have to be considered in the analysis. The coefficients for any one or more frequency components can have a zero value.

A perfect sine wave running through a perfect clipper will produce a square wave that is harmonically an infinite series of odd valued frequency components.

A device that cause an amplitude variation as a function of frequency does not replicate the input signal. By definition that is distortion [I naver stated that it is harmonic distortion. Your definition of distortion is incomplete.]

Don't put words in my mouth.  I asked *you* whether *you* thought a
BPF was a distortion generator.  Now we know your position.  Any
device that doesn't have DC to daylight frequency response and a
perfect, infinite headroom, linear transfer function causes
distortion.  Gotcha.

Uh huh.  So recording studio personnel know what they are doing, but
when I said earlier:

"Since the purpose of a communication system (unless you're just
peddling hardware) is to communicate, then one has to look at the
trade-off between distortion and intelligibility.  If purposefully
"distorting" the signal by frequency shaping, compression, clipping or
```

any combination thereof improves the intelligibility at the other end
of the circuit then "distortion" is a good thing, semantics aside."

I didn't know what I'm talking about. Right?

>>>A brief course in Fourier transforms will convince you that a distorted sine
>>>wave signal is still a series of sine waves, the fundamental, the 2nd, 3rd, 4th
>>>harmonic, etc. The existence of those harmonics is by definition DISTORTION.

And of course you believe that you are the only one in this discussion
that understands Fourier transforms.

Why are you slipping into the "general case" when everything else you
have put forth is in absolute terms?

>
>A perfect sine wave running through a perfect clipper will produce a square wave

Which is different from "a series of sine waves, the fundamental, the
2nd, 3rd, 4th harmonic, etc."

>
>A device that cause an amplitude variation as a function of frequency does not
>replicate the input signal. By definition that is distortion [I naver stated

You are "distorting" what I said, I never offered any definitions.

Hello,

I have LT-2S (first model) not working properly, somebody "repair" power
module and insert some odd power transistors.

There is no information on manual, which original power transistors are
used, so anybody knows, please let me know.

What I found inside is: BLY87A and 2N6080???.

Thanks, Adam

Not only exhaust, heat and fresh air for combustion, you'll need to bypass/lowpass any electrical conductor going in or out of the enclosure, and those cheap clip on ferrites won't do much good, you need pi networks on the conductor itself. You might start with the inverter section of the generator, make sure it's in a well sealed (electrically) enclosure, bypass/lowpass the conductors coming out of it and as long as you don't cause problems with circuit cooling put some RF absorber inside the enclosure, if it gets absorbed inside it won't get out, and don't be dissuaded by the absorber specs, they work quite well in the HF range. You can also get free samples.

Adam,

I don't have the LT-2s but I do have what I believe are the two major
units inside, the TV28-144 transverter and the PA-1441 amplifier.

The PA-1441 uses a 2N6080 driver and 2N6081 final.

I've put the schematic here of you need it:

www.k6mhe.com/n7ws/PA1441.pdf

Hope this helps.

ps. These units are now surplus to me, so I offer them for sale for
$225 USD.

Fred,

I have an EU2000 that I use for charging the batteries in my 5th wheel trailer. I have limited experience with operating the radio equipment from this "QTH" but here is what I have observed.

First I found that the major noise source was the switch-mode battery charger built into the trailer. In fact the original one acually interferred with home OTA TV while the trailer was parked beside my house! I replaced it with an IOTA unit that supposedly meets FCC requirements but is still a noise source.

I finally built an analog "smart charger" using an Astron PS for the raw DC and pass transistors and a UC3906 IC.

Once this was cleaned up I could hear the noise from the Honda. I should back up and say that in my earlier attempts to clean up the charger noise I determined that a lot of it was conducted on the AC side, so I had previously installed an industrial grade brute force line filter at the trailer's AC distribution panel.

So from that respect, the AC side is pretty well filtered, although the filter isn't necessarily installed in an optimum location. But I don't think this matters because my further experience is that most of the remaining noise is radiated.

Shielding is of course out of the question as a practical matter. This leaves the physical separation between the generator and the antenna as the best remedy.

I also operate Field Day from home in Class 1E. The Honda sits right outside the shack and powers the Astron PS that runs the radio. I float a deep cycle battery across the 13.8 V. The generator runs in Econo throttle mode and runs for hours like this. I'm hard put to even know that it's run out of gas unless I keep my eye on the battery voltage.

I mostly run only 20-meters and the antenna is a 3-element beam located about 100' away. Even pointing at the shack I cannot hear any RFI from the generator. When I slip down to 40 or 80-meters any RFI is buried in atmospheric noise.

So I think Honda is right; get a long extension cord and move the generator away from the antenna.

Regards,

Wes N7WS

Subscribe FREE to the K9YA Telegraph. It's FREE! It's FUN, It's ALL ABOUT HAM RADIO!

October Issue Includes:

Ready Reckoners By Philip Cala-Lazar, K9PL

Disaster in the High Arctic By Mark Solomon, KQ�A, & Philip Cala-Lazar, K9PL

'6XT's Flying Ford By John Kirk, VK4TJ/VE6XT

Tom Swift and his Magic Umbrella By Rod Newkirk, VA3ZBB/W9BRD

The Lighter Side of Ham Radio By Rick Hiller, W5RH

Ham Quips By Dick Sylvan, W9CBT

The K9YA Telegraph is a free, monthly, general interest amateur radio publication read by ham radio operators in more than 100 countries. The K9YA

Telegraph contains the stories and features most wanted by our readers, because it is written by them. An e-Zine, it is delivered monthly to your e-mail inbox as a full-color PDF file.

If you're in the mood for Morse, hankering for history, gluttonous for gear, ravished for a review, needing nostalgia, or just plain famished for fun, you'll find it in the K9YA Telegraph.

To download sample issues, subscribe or write an article, visit the K9YA Telegraph Web site. http://www.k9ya.org

Hello Wes,

This help a lot, the diagram is alomust the same.
I got the reply from ssb Germany, and they say that the final was 2n4046 or blw60c.
Both parts obsolete now,

Anyhow, any 25-30w 175mhz transistor will do the job, of course capable AB class.

Thanks for help,
Adam

Not magical... it used the base-emitter voltage drop of an MJE3055T (mounted directly to heat sink) to track with the 2SC2879 power transistors. Since it used a transistor with gain... it worked so much better than just a plain old diode on the sink for tracking. It worked fantastic... I was able to set set class AB bias (I chose about 200Ma) on the power transistors... and hold +/-5% collector current changes from -40 to +100C heat sink temp during amp operation.

How well it works depends on how well you hacked the design from this link I posted (while pointing out some of the many problems with your earlier splatterbox):

http://www.ifwtech.co.uk/g3sek/tr-bias/tr-bias1.htm

> I was able to set set class AB bias (I chose about
>200Ma) on the power transistors... and hold +/-5% collector current
>changes from -40 to +100C heat sink temp during amp operation.

That's interesting. Previously you said your bias scheme can "hold the 500mA bias to 10% from -30 to +85C". It's funny how many times you have changed the specs. I especially enjoyed the time when you changed the power output specs three times in one week after you were caught fabricating them instead of actually measuring them. Oh well, such is the life of an internet-educated hack.

But alas, there's still one unresolved issue here, Brian.... where's the schematic?

Nicholas Witchell - 10/April/1999

Certainty level: 100%

This clip is of Nicholas Witchell reading the BBC2 evening news at 7pm on Saturday 10 April 1999. You have to understand that the psychopaths of the Security Service consider their abuse of me to be "so funny"; and central to their persecution of me is their inducement of their "bought journalists" like the BBC's Nicholas Witchell to laugh at me on television.

So in this clip we see Witchell smirking and grinning while he reads the news. Only part of the news broadcast is shown in the clip; preceding it, Witchell's upper lip quivers in mirth for several minutes, until his entire mouth twists into the uncontrollable smile shown in this clip, through the excuse of a weak non-joke about sports fixtures.

"England expects every man to do his duty"

Certainty level: 90%

This video clip portrays a fairly-certain case of unpleasant MI5 harassment; because of context, surrounding events, not just this one happening. It's the first time an MI5 agent has been caught on video, and, presumably to their chagrin, their paid agent is either engaging in an onanistic practice, or, more probably, pretending to do so, in order to carry out an act of harassment.

The background is as follows. In late June 2000 I had posted the following message to Usenet, about MI5's making obscene noises at me on several recent occasions;

>From: bu765@torfree.net (Mike Corley)
>Subject: relax, don't do it (mi5 again)
>Date: 22 Jun 2000 00:00:00 GMT
>
>you will recall that a couple of weeks ago I was supposing what MI5 were
>doing with their 'single'handed' posting antics at 2am
>
>exciting stuff
>
>so about a week ago someone rings me up at home.... 'is that Emmanuel
>Goldstein?' then he phones back the following day and goes 'huaaaagh' on
>the phone before dropping the handset in excitement
>
>and a day or two later, just coming out of our house to put something in
>the rubbish bin, a pair of blokes over the other side of the road, again
>start making orgasmic noises
>
>I'm not paranoid enough to record minidisc when I pop out for a few
>seconds...... but perhaps I should be

The video clip, which was captured on 1/September/2000, is the culmination of that thread of harassment. You have to understand that MI5's abuse is in threads; they choose a topic, and then continue with it for months and years. Sometimes they drop a topic, usually to be replaced by a worse one, and you never hear of it again.

If the person in the video clip were not an MI5 agent, then he would deserve privacy, despite carrying out a real or feigned act in a public place. But I am almost 100% sure, because of context, that this man was one of their operatives, which removes any consideration of privacy from his act. He is facing away and cannot be clearly identified from this clip. I've never seen this man before or since, but that is true of most other such incidents.

C4 SnowMail - January/2001

Certainty level: 50%

In January 2001 I signed up for Channel 4 TV News's email service SnowMail, under an anonymous email address.
Quite soon Jon Snow and others started getting at me in the SnowMail bulletins, so I promptly unsubscribed.
Here are three distributed messages which may be intended to be against me; I have given these items a joint
probability of 50% only, since it is quite difficult to be sure these are against me, although I think they
may well be.

First item is from 5 January 2001. "Back passage contacts" might genuinely be about Labour were communicating
in a shielded way with ITN; but it may be about Snow's covert communications with me on his programme and in

this bulletin; and it's a slightly strange thing for him to say, it suggests the human body's back passage.
"I wish they'd come and talk on our website".... Snow knows I'm subscribed to his mailing list, and he may be encouraging me to talk to him by email; again, if that comment were genuinely about Labour, then it would be a strange thing to say, since the politicians talk to Snow by phone and on his programme, so they wouldn't talk to him by email; my suspicion at the time is that he was trying to persuade me to talk to him by email, so he could decently lie that my thoughts of reference were incorrect.

MIME-Version: 1.0

January 5, 2000

Good afternoon dear viewer,

Well the 'snowmail' drew a little ire from Labour HQ yesterday. A sensitive call at 6.35pm from my friendly mentor there sought to correct the impression I gave in yesterday's missive that in some way Labour was bounced into naming these latest millionaire donors. Well I'm afraid they were...rest assured Paul Hamlyn would not have been named without the diligent sleuthing of my colleagues, and had HE not been named neither would these latest two.

The only serious inaccuracy I must plead to was the promise that we would put these matters to a 'senior Labour person'...alas none was forthcoming...I shall make no such rash promise again. My same mentor was on the phone again during last night's Channel 4 News urging us to 'get some reality into the programme'. I fear we may have touched a sensitive nerve...and the election campaign has not even started, or has it? I shall try to keep you posted with these 'back passage contacts' as the campaign unfolds..from all sides. I do wish they'd come and talk things over with all of us on the web site...here's an open invitation...

So to today:

Harold Shipman murdered as many as 250 people it now turns out. But he is never to be tried and relatives who seek closure to their uncertainties will never reap satisfaction..we have the DPP, the Chief Medical Officer and a solicitor for aggrieved and bereaved families on the programme..the world's second-worst mass murderer..can he be allowed to escape further action?

Sending private/sexy emails in company time gets workers the sack..Big Brother spies on office premises..is electronic
life in the work place getting out of hand? We explore what we can...and if you are not sure what you can and can't
send, our site spells out the legal dos and don'ts and gives you the chance to put your views to us.

The CIA publishes its risk assessment for the world in the coming years..beyond the CIA itself, what's the biggest
threat to life and liberty? Find out on Channel 4 News..and a major encounter with a man expected to take a top job
in the Bush administration...

And a sumptuous piece from Nicholas Glass in Valencia..a city transformed by a brilliant young architect for half
the price of what the Dome cost us.

Lots moving, see you at 7.00,best as ever,

Jon Snow

The next contact was on 11 January, with the unsubtle words "the lunatics have taken over the newsroom"
from Krishnan GM. The phrase needs no explanation as to why it might be a dig at me.

From: "Guru-Murthy C4N, Krishnan"
Subject: Channel 4 News briefing
Date: Thu, 11 Jan 2001 16:56:25 -0000
MIME-Version: 1.0

January 11, 2001

Good Afternoon. Jon's away so the lunatics have taken over the newsroom. I am joined by Samira for tonight's show.

The Depleted Uranium confusion deepens. What did Ministers and senior officers know about the risks to soldiers?
What did they tell others? And why the lack of candour over the recent documents that have surfaced? Having
dismissed the army report leaked yesterday warning of the dangers of exposure to DU as written by a trainee and
littered with mistakes, the Ministry of Defence now accepts it was written by an experienced officer.
But they won't say who. More awkwardly it emerges that senior officers decided a month after it was written that
the report should be circulated to all personnel likely to come into contact with DU. But was it? Nobody seems to
know. Our Science Correspondent Andrew Veitch has also visited the lab in Oxford that could begin testing
veterans for Depleted Uranium within six months, but they have had no contact from

the government as yet. From
the Tories, Mr Duncan Smith is likely to join us. And we have Defence Secretary Hoon coming into the studio to
answer the obvious (and not so obvious) questions.

No interest rate cut today from the Bank of England, but could it be next month? As real fears are raised about
the likelihood of recession in the US how could it affect us over here? There's been a recent consensus that
Britain could weather the storm instead of falling into the usual pattern of shadowing American trends. But how
realistic is that? And what about all that inward investment we rely on from the States? Liam Halligan has been
looking at just what impact economic downturn across the water would have on us.

The former Bosnian Serb President Biljana Plavsic pleaded not guilty to charges of warcrimes including genocide
today. She was number two to Karazdic and a reputed hardliner during the "ethnic cleansing" of Bosnia.
But has a deal been done on her sentence if found guilty? Just why did she get on a plane and give herself up
to the Hague War Crimes Tribunal? Nobody seems to have any explanation. Her lawyers are asking for special
accommodation and even the possibility of bail. Gaby Rado is there and joining us live is the first Prosecutor
in the Hague Judge Goldstone to discuss whether plea bargains and deals are the only way to get the real villains.

Also the astonishing news that scientists in America have bred the first genetically engineered monkey. What will
they be used for and what's the next step? Does anybody really believe they won't do it to humans before too
long? Julian Rush will have details.

All that and loads more at seven. See you then, I hope. Krishnan.

The third and final item is from 24 January, shortly after which I unsubscribed from SnowMail. Again, it is difficult
to be sure if this item refers to me; it may do, it may not do, 50% captures the possibility. Snow refers to
"third leg of [Blair's] political footstool". In English culture "third leg" indicates one's male member;
Snow's phrase may be a sexual reference, of which there were others around that time.

From: "Snow C4N, Jon"

January 24, 2001

Good evening dear Channel 4 News viewer,

There are times in this business when you suffer severe attacks of deja vu...haven't I already said "Mandelson Resigns!"...I'm afraid I have, and tonight I shall say it again. He's gone, the fat lady has not only sung but died completely and utterly on his career...that is the end of the former Northern Ireland Secretary's political career.

It's a body blow against Blair for whom Mandelson was a mentor, manipulator, calculator, friend, brother and the third leg of his political footstool.
It's a body blow for a Prime Minister who has had to have him resign not once but twice. It calls into question Tony Blair's judgement. Mandy, probably one of the most brilliant spirits in politics, flew too close to the sun...suffering finally at the hand of his own diabolical flaw.
Amazingly it's a flaw Blair understood more keenly than anyone...

And then there are the Hindujas who have compromised every political party with ridiculous photographed party poses..who are they and how do they work?
Masses moving on all fronts on this story tonight. We have the resignation speech in full on our site www.channel4.com/news; if you want to see how Mandelson bowed out.

There are other developments:

The cancer tragedy at Nottingham Queens medical centre..the wrong drug going into the spinal column of an eighteen-year-old Leukemia victim who's now in intensive care, dangerously ill...it's happened before..why has it happened again?

And a moving interview with Sharon Sage who's mother Lorna Sage wrote a spell binding memoir highly rated in last night's Whitbread Prize. An exceptional piece....

A highly political night....see you at seven on four...best, as ever, Jon

After this email I unsubscribed from SnowMail. I could not be sure that these items were or were not about me, but it's an unpleasant feeling that Mr Snow might be getting at me in writing, as he certainly was when he watched me while presenting the news; so I cut my losses, so to speak, and bailed out.

BBC-TV "See You, See Me" - 7/Dec/2001

Certainty level: 80%

On Friday 7 December 2001, BBC Schools aired a TV programme from their "See You, See Me" series.
The series was based in Scotland, with Grant Stott and Wilma Kennedy trying to find some stolen jewels.
Its web home is www.bbc.co.uk/scotland/education/seeyouseeme/

The programme appeared to make some "subtext" references to my situation. Kennedy refers to "it's not fair",
which is a key phrase; its existence started with OCTS MD Hugh S.-W. who humorously referred to my treatment
with the same phrase.
The subtle statement is that it is fair, because we're doing it, and we're always right, even when we're wrong.

The phrase "useless idiot" from the police chief is a clear insult directed at me, and needs no explanation.

But it is the third item in this clip which is most telling. Stott says the words, "humiliating in front of
the whole public, it would crucify us" if the investigation were called off.

That's the phrase that assures
this clip of an 80% probability rating. MI5 are trying to humiliate me "in front of the whole public",
and their strategy is a mixture of ambiguous covert, such as this very programme, and clear overt.

Channel Four TV News - 10/April/2002

Certainty level: 80%

I was watching Jon Snow on Channel Four TV News on Wednesday 10 April, and he again reacted on seeing me
watching his programme. At 7.25pm he was reading an item on atrocities during the Balkan war;

JS: "It was Europe's worst massacre since the Second World War, and Dutch army officers [cough] and the

United Nations should share the blame. So says the first authoritative report into the murder of thousands of Muslim men in Srebrenice at the height of the Bosnian war in 1995. The 7,500 page document took Dutch Government researchers six years to prepare, and it condemns military and political leaders for sending peacekeepers on a mission impossible. Our Foreign Affairs correspondent Gaby Rado, who went to Srebrenice very soon after the massacre, is with us now. Gaby, how damning is this report?"

GR: "Well it is very severe. It accuses the Dutch Government of sending badly armed and badly briefed Dutch soldiers into a very dangerous space out of a sense of national arrogance basically. It accuses the United Nations basically of..."

There are two incidents in this one recording. The first (80% certainty) is when Jon Snow develops a frog in his throat in the first sentence, shortly after reading the text "Europe's worst massacre". There is both verbal expression and facial expression at that point; he is laughing at me, which is at odds with the serious material he is reading. His eyebrows twitch upwards, and he is smirking at the phrase "Europe's worst massacre", and its application to the Security Service's actions against me. Another aspect is that when Snow said "Europe's worst massacre", I facially reacted; in return, Snow would have seen my change of expression, and followed it with his own reaction. He almost says "United States" instead of "United Nations"; he isn't looking at his autocue, his mind is off what he is reading, instead he is looking at me in the little monitor where he sees me through the television.

The first incident I'm fairly sure about, but the second I only give a 20% certainty to; it's when Gaby Rado talks of a "sense of national arrogance", supposedly about the Dutch, but perhaps the English actions against me for over a decade. If Rado's statement were about me, then it would be condemnatory of MI5 as being "arrogant"; but I cannot be reasonably certain it's about me, or much less so that Snow's reaction in the first instance, anyway.

BBC1 TV News - 18/Dec/2002

Certainty level: 30%

This item occurred on Wednesday 18/December/2002, on BBC1 TV News shortly after 6pm. It is one of the "coincidence"
category of happenings, where people by supposed coincidence repeat exactly the words I have said or thought very recently.
In this case, the BBC's New York correspondent Stephen Evans, live from NYC, says the words "airy fairy language",
during a piece on Britain's entry in the competition for a successor to the WTC after 9/11.

I had been thinking the words "airy fairy" a day or two previously and may have spoken them in my sleep. I did not speak them awake.
The TV practice in 1990-92 had been to repeat on TV/radio (or at work) words which I had either spoken while awake, or words I had
thought but not said consciously - since I know that I sometimes say things in my sleep, but cannot later recall saying them,
obviously since I was unconscious at the time. The TV news reader or reporter then finds a context in which to drop a particular phrase;
this practice has a famous exemplar in the "Phil the Greek" item relating to the Duke of Edinburgh - who had been called Phil the Greek
in Private Eye, then a TV reporter managed to structure his report to include the words "fill the Greek community with alarm".

It might appear funny, but when such "intentional coincidence" happens a lot, as in 1990-92, and when it supports other methods of obscenity, then the amusement value wanes.

The choice of words appears to form a homosexual reference - the way it works is that the Security Service are blokes fantasising continually about another bloke, so to avert the obvious observation of their being gay see here for another instance of unwholesome MI5 fantasising in public), they try to assign the attribute to the victim - they do this sort of thing all the time, with all sorts of attributes. However, in this particular case I give it only a one in three probability, since this incident seems to have been a one-off at that particular time.

Life is so hard

Certainty level: 100%

This relates to harassment at my workplace in Canada. Yes, "they" had their claws into my employers in North America, it doesn't just happen in England, it happens here as well.

During the second half of 1996, at work, I was sitting near a co-worker whom we shall call Mark (we can, because that's his name). This guy occasionally came out with words and phrases that made me think that "they" had got to him and were supplying him with information about my home life (not social life please note, because of course I don't actually have a social life here).

During November 1996 I tried to catch him in the act of saying something "meaningful", a difficult exercise because as soon as he saw a tape recorder, he shut up completely, except for times when he knew he would be out of range of the walkman. (Note that the quality of this recording is not very good; I was just using a four-year-old tape walkman with a cheap microphone, quite low-tech).

During the evening of 12 November 1996, at home in my apartment (flat to you UK-ers), I said "life is so hard, and then you die". A nihilistic, negative thing to say, but quite distinctive. The following day, 13 November, Mark said loudly, "life is so hard eh, and then you die" followed by loud laughter.

In my book the precise repetition of the words makes this incident a 100% certainty. You, the reader, may differ, but then living in a free country allows each of us to have our own opinions, doesn't it?

GLR-David Hepworth (21/Feb/1997)

Certainty level: 80%

I was listening to BBC Greater London Radio (GLR) by stealth, ie. on my walkman with headphones, with the sound turned right down, to prevent anyone from hearing what I was listening to. Yet somehow "they" are still able to tell what station I am listening to on the walkman. After half an hour or so listening to GLR, DJ David Hepworth came out with this;

"I assume Brian, do we have an embarrassment of prizes in there, we do, don't we, absolute obscene amounts of prizes, there will no doubt be a riot at the back door, and that's A-level coming up after this"

The key phrases in what he said are, "EMBARRASSMENT of prizes", and what he himself emphasised verbally, "ABSOLUTE OBSCENE amount of prizes". It is my belief (based on content and tone of voice) that when he spoke these phrases he knew I was listening, and that the phrases refer directly to my situation. The "EMBARRASSMENT" is the embarrassment he and other media people would feel at having their wrongdoing exposed; the "ABSOLUTE OBSCENE" (which he verbally emphasised) described the disgusting sexual abuse which the harassers have been throwing at me.

Of course, I can't prove that this is what he meant, although this has happened enough times that it's hard not to recognise it when you see it. I sent David Hepworth a copy of this explanation, with the results listed in a subsequent item (David Hepworth 9/May/1997).

GLR-David Hepworth (9/May/1997)

Certainty level: 100%

This time I deliberately listened to Hepworth with the sound turned up on the radio, to try to get a reaction. Sure enough, he and his cronies reacted;

David: "we have executive drivetime, and we have Brian in charge of the prize cupboard. Brian it's not a bad prize cupboard this week is it?"

Brian: "no David in fact it's an absolute (EMPHASIS) embarrassment (END-EMPHASIS) of prizes this evening" (laughter)

David: "what have we got?"

Brian: "well in my left hand alone we've got that .... Gary Clale, I don't know if you remember him obviously still alive and kicking.... and that's just in my left hand"

David: "So it's certainly worth competing. Rock and roll spelling test is your first opportunity to take advantage of this embarrassment of prizes"

What I "read into" this item should again be quite obvious. Remember, I sent off a letter of complaint to Hepworth after his spying activity during the previous show. Here the emphasis on "absolute embarrassment" of prizes shows he knows this is a "key" phrase.

It might be interesting to try to talk to DJs like Hepworth and ask them what they get out of abusing their listeners. But if you challenge them directly, they show their true colour (yellow) by either not answering the challenge, or by denying that harassment has taken place.

Capital Radio (11/April/1997)

Certainty level: 10%

A nice easy one here. The DJ is heard to say (around 8.30pm);

"Jacko in town, what a gig it's going to be, that guy is amazing, and psychotic, but amazing on stage, 0171-420-0958, on stage he's a madman but he's wonderful"

I was listening to Capital loud and clear, trying to get a reaction.

The above may have been a reaction. I'm not sure if it was, and I'm not sure that it wasn't.

Neil Fox's Juke Box on Capital Radio (week ending 15/March/1998)

Certainty level: 70%

Here is an excerpt from Neil Fox's show on Capital Radio 95.8FM, sometime during the week ending Sunday 15/March/1998 (probably during the weekend, but I don't remember).

First I will give the text of the conversation between Neil Fox and telephone caller Martin, then I will state my interpretation.

(conversation) (F=Dr Fox, M=Martin the caller)

F: coming up on the jukebox, the hotline's 0171-4848-958, just a quick shout here and so who's this going to be then Mr Producer?
(staff, shouting) MARTIN!
F: Couldn't quite hear you, it's going to be?
(staff, normal voice) Martin.
F: Thank you. Martin, hello.
M: Hello, Foxy.
F: How are you Martin.
M: Er, knackered.
F: Why?
M: Didn't get much sleep last night. Party down the road.
F: What time did you go to bed?
M: Four o'clock this morning.
F: Well that sounds quite a reasonable Saturday night if you ask me.
M: I was up at eight.
F: You were up at eight this morning?
M: Yeah.
F: That's sick. Why? What on earth made you get out of bed at eight this morning?
M: My father.
F: Well that's no good. Why is he being sicko, is he being a sadist?
M: No, he out there, sort of clearing room.
F: Listen, is your dad there?
M: No, he's downstairs.
F: Oh mate, can you get him?
M: No.
F: Does he not let you on the phone? The only reason is that I wouldn't mind having a chat with someone who makes anyone get up at eight o'clock on a Sunday morning. I'm sorry, that's ill isn't it, that's out of order.
M: It's sick.
F: I'm just going to ask around here. What do you think then, eight o'clock Sunday morning? That's out of order isn't it, for any father?
(staff) Yeah, definitely.
F: Is he like victimising you or something, is there any reason why he wanted you up at eight o'clock? To clean your room?
M: Well as I say I got up at eight this morning to clean my room and it looks worse that it did yesterday.
F: Well I should have just left it and stayed in there until eleven o'clock if I was you.
M: Well I was up, I didn't get out of bed.
F: What, you didn't get out of bed at eight o'clock? No, he woke you up at eight o'clock. Did you do any cleaning at all?
M: I haven't touched my bedroom.
F: Top man. Boy you're going to get your arse kicked later aren't you. Now a song for you, what can we play?
M: Guns and Roses, "Sweet Child of Mine".
F: And we're going to dedicate this to your father?
M: No we're not, we'll dedicate this to my good mate Jamie, who's sitting on the bed now.

F: Right, hello Jamie. And anyone else? Any top totty in your life at the moment?
M: Unfortunately no.
F: The totty factor is quite low at the moment is it?
M: It's dead.
F: It's dead? What, nothing?
M: Nothing.
F: What, zero? Well, that's pathetic. No wonder you're down. You stay out til four o'clock and nothing. We'd better have words when we're off the radio I think. We need to give you a team talk. You have a good night tonight.
M: And you.
F: Take care.
(song starts)
F: Actually something was going through my mind. I think I'll leave it.

I'm not really sure whether this is in any way about me. It probably isn't. Probably it's just my nasty suspicious mind finding links where none exist. However, here is an explanation of why it might, possibly, be about me.

Throughout this interview, I was throwing abuse at the radio, and to my mind, Neil Fox was hearing the abuse, and responding interactively. This explains why he sounds so stressed when talking to telephone caller Martin, and the general violence of his words including "Boy you're going to get your arse kicked later aren't you".

The piece starts of with the producer shouting the name of the caller, which might be related to my loud vocalisations at the radio. The trouble starts off with Fox saying "That's sick". "Sick" might be taken as a reference to my condition. Then Fox says, "Why is he being sicko, is he being a sadist?", again sick = my illness, "sadist" = attitude of my oppressors towards me. "that's ill isn't it" = further comment on my illness. "Is he like victimising you or something" = again what my enemies are doing to me.

Fox sounds quite happy when he gets Martin to say "It's sick"; as you would expect him to, if the comment were directed at me. It is a constant feature of my enemies' harassment of me that they get intermediaries to verbalise the abuse. Immediately after saying "victimising you" Fox gives a little laugh, to show he thinks the victimisation (of me, not Martin) is funny.

Fox gets increasingly nasty as the piece progresses. "Boy you're going to get your arse kicked later aren't you" is not really what you would expect him to say if he were just talking to Martin. Fox is on the same side as Martin, so why would he be so verbally aggressive to him? On the other hand, if the piece is about me, then his strong words start to make sense.

Fox's jubilation at finding that Martin's "totty factor" is "dead" again doesn't make much sense unless you think that he might not be considering Martin's totty factor, but mine, since it's a fairly well known fact that my "totty factor" is not significantly above zero.

To round off the 135 second interchange, just as the next track is starting, Fox says, "Actually something was going through my mind. I think I'll leave it". Given that I was chucking abuse at Fox throughout, it is only natural for him have thought up a reply that he would have wished to have made, except that such a reply would (a) probably not be suitable for a family show, and (b) have given the game away completely.

So there you are. You the jury, what say you in the case of plaintiff vs. Neil Fox's Juke Box, guilty or not guilty?

Foxy's Showtime on Capital FM 25/11/98 7.35pm

Certainty level: 100%

This one, I can say with absolute certainty, is about me. It was recorded on my Sony Recording Walkman on the evening of Wednesday 25 November 1998. It doesn't mention me by name, so the objective observer might have trouble understanding why I'm so sure it's about me. I'm sure, because the harassment had restarted over the period when this piece was broadcast, and what Capital transmitted would have been in context with events at the time. (Sorry if that explanation is somewhat opaque, but I don't really want to embarrass myself by giving an explanation in detail, and an intelligent reader should be able to work it out for him/her self.)

This isn't the first time Capital have "got at" me; they were doing so right at the very beginning in summer 1990, when they said, "if he listens to Capital then he can't be all bad"; and Tarrant made remarks about me in his breakfast show in spring 1994, when he said, "you know this bloke? he says we're trying to kill him. We should be done for attempted manslaughter."

Unfortunately I didn't record those previous, much more conclusive instances of harassment by Capital DJs, and Capital Radio tells me they only keep recordings for three months. But lately I've been recording everything, and here is one product of that recording.

Neil Fox was introducing some petite Swedish songstress, sounded like Amelia, when he said something about her petite-ness ;

"she's a big big girl, actually she's really about tiny, she's this big, would you say what less than....."

then one of his studio staff shouted, "six inches"

then Fox laughed and said, "less than a meter tall, definitely"

What I think the "six inches" referred to should be obvious. I think it's sexual abuse directed at me.

Also there were a lot of words like "crazy", "mad" etc on this programme, which reinforced my belief that this was on purpose directed at myself.

I think Fox may be something of an unwilling participant in this abuse, he doesn't want to be an abuser but the persecutors are using his show and his staff to get at me. This is not the first time this sort of thing has happened from his show; and my guess is that it won't be the last

Keith-

What are the circumstances when this occurs? As Pat suggested, the IC-706 is voltage sensitive, and may temporarily go dark when you start your car. However, it should immediately come back to life after full voltage is restored. Otherwise, you could have a DC wiring problem.

One problem I had with my old IC-706 (original), was that it would occasionally run down the car battery overnight. The next morning the battery was dead and the rig was hot.

As far as I can tell, the problem was with final power transistor leakage. Their collector circuits are not switched but are connected directly to the DC voltage input. After jumping the battery, the rig would appear to work OK.

One thing you did not mention: Are you using the radio with the control head remoted? Or are you using it connected to the radio. Early on, Icom had a problem with the remote cable picking up rf and shutting the radio off. I had the problem myself on 2 of them. After consulting AES & Icom, I was told to put ferrite cores on that cable. So I did. One as close to the radio under the seat as possible and one near the control head. The problem went away in both cases. Same is true for the new IC-7000 in the remote setup.

I have a 706mkIIg and it does the same thing. It would cut off and on on receive and also transmitt. About 2 years ago it was doing that and it finaly did not power back on. I sent it off and several things were replaced. It worked fine after that for over a year. It is now powering off and back on about once or twice a day.

It is not a power issue as it is in the house and is being fed from an Astron 50 amp supply. The supply is working fine as I also have 746 pro hooked to the same supply. The voltage out is around the nominal 13.8 volts. I have checked the connections to the 706 and the connector on the back of the rig and could not find any problems. It will put out around 100 watts on the lower bands so I doubt there is a power supply problem with it.

Yes! That is *exactly* what happens as the batteries come to the end
of their lives in the Superadio.

As that time draws close, you'll have to turn the radio up a little more to get the same volume, but you probably won't notice. Then, the sound will become a little distorted, and you might eventually notice that. Not too much later, what you describe will happen. (The FM section takes more power than the AM and will stop working sooner.)

When you tried the radio the next day, as you wrote above, it worked because the batteries had had enough time to build up a little charge, not because it was inside (although some might argue the heat of the outdoors could have increased the resistance of the components in the radio more than it could have increased the output of the simultaneously-dying batteries and was, thus, a factor). You'll sometimes be able to operate the FM a little longer if you do it at a low level.....

I've never seen a radio in which the tuner sections are separately powered.
Compared to the output stages, they draw little current.

And very few radios -- the GE P970A being an exception -- have separate AM
and FM tuners. We never established if this was the case with the
Superradio.

Since the topic of this thread is the GE Superadio, you should look at the
schematics of the radio to provide some validity to your statement.
According to the schematics, both the Superadio I and Superadio III remove
power to the tuner circuits not being used.

While the tune sections may draw little current relative to the audio
circuitry when performing at full output, at lower output, the extra
current can have a significant impact on battery life.

>

Your apparent definition of tuner refers to the variable capacitor. Again,
your statement can be verified by looking at the schematics. The Superadio
I uses a single 6 section variable capacitor. The Superadio III uses
varactors for tuning. They are driven from a single source.

However, if your definition of tuner includes all the circuitry from the
antenna to detected audio, the Superadio I and III do not have separate
tuners as they both have common IF circuits.

I have a Motorola Service Monitor, R2001D/HS, that is surplus and we no
longer use. Unit powes up and was being used regularly when we stopped
using it. The battery does not hold a charge but unit works well on AC
power. I will look at any reasonable offers seriously.

That's not fair craigm. You are using actual data and facts vs. an unsupported general conjecture.

And you're right about William not knowing what he's talking about in this case. That seems to be the norm for many around here. Defending one's previous posts by pleading ignorance doesn't make up for making false generalized statements. Once the misinformation is posted, many will unfortunately believe it to be true. Thanks for offering the factual counterpoints.

Excuse me?

I serviced electronic equipment throughout high school and long after. Most of the general statements I made are correct.

Disputing the plausibility of a claim has nothing to do with whether I know what I'm talking about. I would rather be wrong because I was applying common sense, than be right because I blindly believed what someone else claims.

Radios tend to be designed as cheaply as possible. That means using as many common circuits as possible, and avoiding "unnecessary" components (such as switches to disabled "unused" circuitry). Radios such as the P-970 and Superadio are the exceptions, not the rule.

Well I am sticking with my old IC751.  A Guy in Italy made a replacement
ramboard and sold em all over the world, what the board did was fix it
so it was impossible for the IC751 to loose its brain (operating system).
Mine did that and I lost most of the bands were lost, no way to restore
them.   The Italian guy made a whole new board to replace the original
one so you could never loose the operating system itself, you would
only loose the 32 memories you had stored manually.  These of course
could of course be reset one by one in a few mins.
                           Joe

Was I not clear enough for you?

 We were talking about Superadios.  They are obviously something you know little
or
nothing about.  Hence the quote:  "And you're right about William not knowing what
he's talking about in this case."

Has anyone a manual for the JPS SNV-4 Voter? This appears to be an earlier model (about 11-12 years) JPS DSP voter that was a 4 channel model. (This is not same as currrent SNV-12 model) I checked JPS website and found nothing.

The reason I am interested is that I picked up one of these for a project and it is lacking the correct documentation to set the dip switches.

The unit I have has Control Board Assembly 5940-202000 which has only two dip switches S1 and S2. The manual (partial) that I have (rev 1.1 July 1996) references a S3 on the control board with additional switches plus a parallel control I/O port 9 which this specific unit does not have. I don't have a board with S3 so the instructions are probably wrong for S1 and S2. So I think I need a rev 1.0 manual or earlier. If it helps, my control board has a lot of empty layout that was apparently for an 8 channel version with part number suffix beginning with 4 instead of 2.

I have the unit on the bench working pretty well, as far as audio performance, but I really can't get the COR and repeater PTT logic sorted out without a better understanding of the DIP switch settings. I suspect I haven't got S1 and S2 on the control board set properly and I am not entirely sure about SW3/6 on the DSP boards either considering that switch positions 7 and 8 are not referenced.

Can anyone help me or direct me to where I could find either a paper or soft copy of the manual and any programming notes?

Thanks

Have a quantity of Test Equipment and Radio Communications Service Manuals, both Commercial & Amateur that I have rescued from the Dumpster. Most of them are in Like New Condition.

Please check my site: www.rodemi.com   for what is available. Click on the MANUALS Heading. I am updating the site as time allows.
I recently retired from the Commercial 2-way radio business and would like these useful manuals to find a good home.

Thanks for looking....Norm VE3CZI

I'm having some trouble with the auto-tuner in my Yaesu FT-1000 and I'm wondering if anyone can help.

If I turn on the auto-tuner, even when I have a near-perfect match to the antenna, the SWR goes very high and the output power goes very low. If I hit START, the WAIT light comes on and then it just sits there, nothing happens, only way out is to turn the auto-tuner off.

I'm waiting for a service manual to arrive and then I'll troubleshoot it,
but meanwhile I wanted to find out if any of the rest of you have seen
that problem, or if there is a common thing that causes it.

It's relatively unimportant at this time because I use an external tuner
with a ladder-line-fed inverted V, but I'd like the internal tuner to work...

The radio is an older FT-1000, no -D or -MP or any other suffix.

Thanks for any help...

```

I have gotten a little farther in troubleshooting the autotuner in the FT-1000. It seems that it works perfectly on all bands except 20 meters, where it won't work at all.

I have no service information for the FT-1000 in general or the autotuner in particular. Anyone have any idea whether there is some specific thing that's unique to 20 meters that might have gone bad?

I would have suspected one of the tuned circuits (open L, shorted C) but the thing doesn't even try to find a match, just sits there showing a very high SWR and not making any moves at all.

I suppose it could still be one of the LCs, and the thing just shows such a high SWR that it gives up and doesn't even try (but, it also doesn't light the "HI SWR" LED...).

```

Another fine sample of a Ham Operator gone bad. The "SteveoOhioHomo@yahoo.com"
is brought to you by Douglas Adair N8WWM. Please note the original newsgroups
he cross posted too:
rec.radio.cb,alt.usenet.kooks,soc.culture.spain,rec.radio.amateur.policy,rec.arts.books.childrens

>I am LQQking for a Hustler 160m mobile coil and whip.

Keep LQQking. There isn't, and never has been, such a product sold by
Hustler. There are a number of conversion kits around (or make your own)
but you can't really expect much efficiency from such a dramatically
shortened antenna.

Why are you knocking this product? Did you purchase one of these units and have you tried to use it or do you just have something against Telstar and you like to bitch??

I am not involved with nor have any monetary investments with Telstar!

Should be simple for you guys,
I'd need a schematics for building 2 input antenna coupler for TV antennas.

Thank you!

"Insufficient data". You need to be more precise about what you're trying to accomplish.

I can think of at least five possible interpretations for "2 input antenna coupler":

- A power divider, which allows two separate TVs or radios to be fed from a single antenna, over that antenna's full frequency range (a.k.a. a "splitter")

- A power combiner, which the signals from two identical (or similar) antennas to be combined and fed to a single output (e.g. to allow "stacking" of antennas for increased directional gain).

- A "duplexer", which allows the outputs of two dissimilar antennas, which handle different frequency ranges (e.g. VHF and UHF) to be fed down a single feedline.

- A "channel combiner", which allows the outputs of two (possibly similar) antennas, pointed in different directions to pick up different stations, to be combined without interference. [Single-channel combiners are available commercially; more complex combiners can be made but they aren't trivial.]

- An impedance matcher, which allows an antenna of one impedance to be used with a feedline of another impedance (e.g. a balun which goes from a 75-ohm coax to a 300-ohm twinlead-type antenna).

```

Thanks Dave, by antenna coupler I meant a power combiner, but,
precisely, since channels which are emitted from tv transmitters (obviously
in 2 directions from my home) are not overlapping, nor are adjacent, I think
of pointing logperiodical antennas to transmitters and couple them into one
tv cable towards receiver.

Use a phasing harness or an antenna coupler.

http://www.kyes.com/antenna/stackluge.html

You COULD build a coupler with a few inductors and capacitors, but... why bother? A good quality vhf/vhf combiner (aka splitter) or uhf/vhf combiner (aka duplexer) is about $5 US.

That may work acceptably, if your log periodic antennas have a high enough front-to-back ratio, so that each is rejecting the signals coming from the transmitters "behind" it. Without sufficient F/B rejection, you'll end up with some amount of cancellation/interference between the two. And, even with high F/B rejection in the antennas, you can still end up with ghosting and interference if the antenna pointing "away" from a transmitter picks up a signal reflected from buildings, trees, or mountains.

You'll have to accept some amount of signal loss, no matter what you do... the combiner will have some loss, and (to the extent that it doesn't isolate one antenna from the other) each antenna will act as a load on the other and will actually re-transmit some of the other antenna's signal.

Building an effective broadband signal combiner isn't rocket science, but neither it is trivial. Frankly, in your situation, I'd recommend that you just buy a commercial combiner. For example,

    http://www.starkelectronic.com/cmjoiner.htm

The first item #0538 is a two-way combiner/joiner made by ChannelMaster, which appears to be designed to do just what you want... $9.95 plus shipping. It takes 75-ohm coaxes from the antennas (you'd need

75-to-300-ohm balun on each antenna) and feeds a 75-ohm downlink with the combined signals.

Click on the "Winegard Combiners" link on that page, and you'll see the Winegard CC-7870 (same idea, higher cost) as well as the SD-3700 (which has 300-ohm inputs and a 75-ohm output - no need for separate baluns on the antennas - just run some 300-ohm twinlead from each antenna to the joiner).

The other alternate solutions to this problem that wouldn't have the potential ghosting problem would be: use filtering combiners (feasible for one or two "joined" channels, probably too expensive for more than that), or use one antenna with a rotator, or use two antennas and two feedlines and a "which antenna?" switch at the TV set.

Human natures are fine tuned for gene pool survival.

The way we evolve in the gene pool is that when we're not at war, we're in a race.

Peace and freedom means competition. Some people are uncompetitive. So they don't want to compete. Those people demand slavery.More...

Those who demand slavery are not necessarily poorer or richer, superior or inferior. Those are people that somehow do not like competition.

The farm owning farmers in southern US, for example, do not want to compete with the higher salary the industrial north has, so they demand slavery. This happens despite the fact that the landlords are already way richer than their slaves.

Uncompetitive businesses also do not want customers to be free to choose the best products. They demand enslavements of consumers by restricting consumers choice to choose better products.

As time goes by and consensual productive means to aquire wealth become available, those who oppose competition tends to be the one inferior.

When we're not at war, we're in a race. So in a sense, some part of life is a zero-sum game. The happiness of some superior competitors correlate with gene pool survival of such people. This correlate with the extinction of inferior people and this make inferior people unhappy....page...

For example, women prefer rich smart males and normal males prefer as many females as possible. Actually poor males prefer more money rather than more women, but that's later.

If rich smart males get more females, then rich smart alpha males will survive better in the gene pool. That means, the other males do not get any. Hence, the lesser males will not be happy. They will then come up with monogamy to ration females in equal share for everyone.

Those who are uncompetitive are not going to say honestly that they are disgruntled competitors. They're going to come up with some religious unscientific fairy tales to come up with pretext that freedom, such as free sex is wrong.

In short, whenever someone is happy, whenever something gives pleasure, happiness, and money, you can count that someone, somewhere, somehow, will come up with some fairy tales of who knows what that somehow it's wrong, bad, and should be prohibited.

The preference to snuff of happiness earned by others are called envy. In a sense, those who want to be happy are meant to kill each other with those who are envious.

Unless those who run the fastest also hit the hardest, success is simply a bridge to a gas chamber. Deviation from free fair competition turns life into some form of gun fight.

Not everyone can be appeased in a gun fight. Envy is simply unappeasable. The way to keep pursuing our happiness and still be alive is either to kill, or threaten to kill, those who are envious of us that it's not to their best interests to kill or prosecute us....page...

That's why I strongly support death penalty. Without it, all succesful people will be slaughtered by bigots that don't mind going to jail for it.

It's also the same reason why many ugly women oppose porn. That's because those women are envy bigots.

Think of it this way. Pretty women can just show some skin and make millions of dollars. Ugly women has to sexually serve poor males and get knocked up for much less money.

If this keeps going, pretty women can pick the best males with the best genes and provide their sons with better education, opportunity, and more initial start up capital.

The pretty genes will survive better in the gene pool and the ugly will be outcompeted, like in Europe or Japan. All thanks to porn.

Obviously, pretty porn stars are way better of then ugly wife. Becoming a porn star or prostitute is then one of the best job ever in this world.

However, out of envy, ugly women will want to prevent that. What's their justification? By saying that all the good jobs are so bad that it can't possibly consensual, and hence has to be prohibited.

They said that porn should be prohibited to protect women. Which women? Not the consenting one of course. How in the earth people get protected from consensual offers anyway. It's there to protect disgruntled envy competitors.

Trying to participate in the Maritime Mobile Service Net on 14.300 this weekend with that contest on has convinced me I need a better receiver.

Any suggestions for a good general-coverage receiver with a good IF DSP?

I like the transceivers I have (FT-1000 and TS-940S) and don't want to get rid of them or trade them in for one of the new megabuck rigs but I do need a better receiver for times like this weekend.

Any suggestions would be most appreciated...

Looking for the best audio DSP add-on box that I can insert between radio and speaker.

I have a relatively old Am-Com DSP speaker that I use with the IC-735 and it works reasonably well though it doesn't really have any versatility (no way to adjust the filter characteristics or depth). In any case I need something I can use with the SP-5 speaker that matches the FT-1000.

Any suggestions appreciated... thanks...

I have one of these, 100% DSP.

Ken,

Low voltage

RF in the "shack".

Two known issues with this radio. If the radio is remoted, check to see that the little screw that fastens the remote cable is secured to the body of the radio. This is VERY important! Make sure it is TIGHT. This will shut the radio off as RF will get into it via the non-shielded cable (without the little screw) if the screw is omitted or loose.

OZ6PU has created a nice site

http://web.mac.com/oz6pu/dstar/dv.html

or a site under construction

http://d-star.dk/index.html

you might have a slight difficulty with the languase. Its written in a
beautiful Danish.

If you have any questions about the radio you could always mail oz6pu
(at) qrz.dk

PURE B--- S---

The peak power is the peak power is the peak power!

Distorting the audio with a speech processor ... distorts the audio.

Distorted audio is distorted audio is distorted audio.

Modulation is supposed to fluctuate greatly. It is supposed to replicate your voice which fluctuates greatly. If it does not replicate your voice it is by definition DISTORTION!!

Most processors cause 'nasal' and high pitched sounding audio because our voices are not 'nasal or high pitched. It is called DISTORTION.

I understand DISTORTION quite well! I hold an EE degree, managed an EE design
department for 10 years, and served as Chief Engineer on a major Military System
LGM 118A RS/RV.

Speech compression IS IS IS distortion. PERIOD!

I can see why you're more interested in $$ than in accuracy.

If I put a CONSTANT amplitude swept frequency signal, swept from 300 to 3000 Hz, audio bandwidth, to the input to a transmitting device and I get a VARIABLE amplitude signal, swept from 300 to 3000 Hz, as the audio output, the device has DISTORTED the audio.

That's just what speech compressors accomplish.

Every single speech processor is a controlled distortion device. You can market and do salesmanship all you want. You are still selling a device that distorts the audio.

Distortion is distortion!!

You are correct, of course. But there are instances where distortion
increases intelligibility. as I'm sure an EE knows in spades.

It not only Distorts the audio signal but causes either over deviation on FM
or Splatter on both AM and SSB, and that's the garbage you hear on adjacent
channels.
If you look real close on some built-in CB power meters, instead of the
signal increasing, it actually decreases!
Distortion = Flat topping of the signal...

Far be it for me to in any way shape or form, defend the spamming hype, marketing what is nothing more than a common IC made for the purpose, but I'm going to disagree with you to some extent.

By your definition, any bandpass filtering, such as you set up in your example, would cause "distortion." The transfer function with respect to frequency is nonlinear, i.e. it's distorted.

Unless you're one of the guys gargling on 14.18 MHZ, I hope you would not argue that frequency response shaping is not something that we want to do in (voice) communications systems.

So assuming we agree on that, then like the guy negotiating with the gal he's trying to bed, we now are just negotiating the price, or acceptable amount of distortion.

Since the purpose of a communication system (unless you're just peddling hardware) is to communicate, then one has to look at the trade-off between distortion and intelligibility. If purposefully "distorting" the signal by frequency shaping, compression, clipping or any combination thereof improves the intelligibility at the other end of the circuit then "distortion" is a good thing, semantics aside.

Ed, of course you are correct. The problem with CB compressors and the folks who use them is that they don't know or pay attention to the reasonable limits.

My oldest son owns and runs an interstate long haul trucking business. I have heard more garbage on 27.185 MHz from over compressed, over powered, over distorted, off frequency, boosted radios while riding shotgun with him than I care to recall.

Most audio 'power' is in the lower portion of the voice spectrum. Increasing the mid range by 2 to 4 dB, adding 2 to 4 dB of audio spectral distortion, does increase received intelligibility AND it does sound un-natural. Also, increasing the average audio power output from 30% duty cycle to 50 or 60% audio power output increases the thermal load on the PA final and heat sink by 100% in SSB and by approximately 40-50% in AM. I don't believe CB rigs have thermal designs for the heavier duty cycle.

When I chase DX on the ham bands I do not use compression. My transmitted audio passband is 300 to 2400 Hz [IC 756 P3]. I have four HF radios [IC756P3, IC746, IC706MKIIg, and KW TS570D] all with built in compression capability.

If I can't work them on SSB I do it the easiest way possible ... CW [Don't need compression on CW] :-)

I have heard so many over-compressed signals on 75 and 20 meters that I'll turn on two meters and join a local rag chew or round table where we old farts solve all the world's problems.

One of the things that I liked about some Yaesu radios (haven't used them all to know) was that obtaining robust/strong audio with my bassy, soft voice was as simple as turning up the mic gain a bit so that it was just entering distortion. This trick even works on my FT-690R and used to work quite well on my FT-726R as well. Getting my voice to project through any radio has been a constant struggle.

Later on, with the advent of the IC-706, I was able to get good intelligibility by shifting the "window" a bit through the crystal filters. This is simply a matter of a software adjustment.

Like you, I do not use speech processors. They seem to be "tuned" for voices that are a tad higher in frequency than my voice, so are completely counter productive when engaged.

I have a Robyn 520D CB set from 1977 that is paired with an EF Johnson ceramic element mic. No, it does not match at all, but it can make any male voice sound like the God Thor when they talk. I keep it around just to remember how far we have come. <G>

Has anyone used an 8 pin mic on the Yaesu FT857 in place of the standard stock microphone. Obviously you have to get around the RJ45 by doing this.   Are there adapters available, or do you pretty much have to hack off the connector on another microphone to do this?

Please EMAIL me responses to n9vu at yahoo dot com

Thanks,

GB

I am looking for the wiring diagram of the MH-34 speaker/mike which
I'm using for my VX2R 2m/70cm handheld . I believe it's compatible
with other Yaesu equipment so there should be a few of them around.
Want to make a splitter to use a separate station speaker when using
the rig at the shack (I know, there is a speaker connector on the mic
body, but that means another wire running to the mike which is not
very neat).
I think the diagram is on the box, which I've lost.
Tnx
Rich,

Good evening, Brian.

So, how do you like it?

Does it live up to all that hype on the Universal Radio sales page?

If it does half of what the marketing types at UR claim it does, it sounds like a pretty good unit.

Kind of pricey, though. But I guess all of the good stuff is pricey, these days.

Hi, Jerry.

I have used my IC-706 mobile in a car, truck, motorcycle, and airplane, always with the remote and cable, and have never yet used the screw to hold it in. Never had a problem.

It will shut itself off due to low voltage, though. Had that happen many times when using it in the shack on an AGM battery.

For Sale: My SGC SG-2000 ADSP2 PowerTalk Transceiver. THIS IS THE
CURRENT MODEL. Transmits form 1.8-30 MHz & Receives from .5-30 MHz.
150 Watts. DIGITAL SIGNAL PROCESSING. For Amateur Radio, Type accepted
for Marine Radio HF SSB & CW, Commercial HF, etc. Go to this website
for all the information on the SG-2000 ADSP2: - - http://sgcworld.com/
2000ProductPage.html
- - This is just back from SGC where it was updated and serviced. The
front panel is perfect. There are a few scratches on the top.
Electrically the radio is in perfect condition. It comes with the mic
and the power cord. And, if I can find them a quick start card and a
manual. (The updated manual is available on the SGC website as a Free
download. The price is $1,450 plus actual shipping cost from my zip
code to yours. My zip code is 32224. Contact Bill - -
iamw7gsa@gmail.com - - or call me at 904-821-5055 (eastern time). I
ship worldwide. I can accept Cash, Money Order or Bank Transfer.
Please add 3% for PayPal. Thanks for looking. Bill

Outstanding SWL rcvr, a 10 out of 10. As a ham rcvr it's a 9 out of 10.

> Does it live up to all that hype on the Universal Radio sales page?

On one hand in general yes, on the other hand no radio lives up to it's manufacturer's marketing hype. There's a detailed by the-the-numbers review of it in the ARRL website.

> If it does half of what the marketing types at UR claim it does, it sounds

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

And once again, rec.radio.amateur.equipment is not a buy and sell newsgroup. It's for the discussion of amateur radio equipment.

Hence ebay posts don't belong there, along with all the other ads that get posted there.

That's the problem with the previous replyer, he still doesn't use that leverage to get rid of the ebay poster. He somehow thinks ebay is somehow worse than buy and sell ads.

It would be nice to say that the ad doesn't belong in .boatanchors but the people who created it circa 1995 or 96 decided that buying and selling was too important a part of the hobby, so they let ads in, though in the charter it's way down on the list of

things to post about. So instead, we get all kinds of ads there,
things that weren't even born when the last boatanchors were made,
and those ads for guns and those ads for computers, and so it goes.
Once you let ads in, the junk follows.

It wasn't about ebay - it was about a *VERY* rare (I don't normally use that word, but here it truly applies) radio - a boatanchor at that - that just happened to be on ebay. Fowler R390As are rare - there were only five built, and s/n 2 is in (reportedly) the best condition of the known survivors...

I didn't start this thread - as I assumed it would find it's way to r.r.a.b on it's own (it did - and no it wasn't posted by the seller, nor on his behalf).

I did start a similar thread on rec.antiques.radio+phono as a discussion about how it might compare in value to some of the *rare* sets from the 30's (Zenith Strat, Sparton Nocturne, Crosley WLW - etc.). As it turns out - not even close.

The seller didn't need to "hawk his wares" here or anywhere else for that matter - the radio's provenance yelled loud enough on it's own.

best regards...

Mark-

Assuming you have solid state finals, your power supply voltage may have
fallen off slightly. I've found that a slight change in DC voltage
produces a large change in power output and power supply current. Be
sure your supply voltage is a solid 13.8 volts under load.

If you have the ability to measure the voltage inside the radio under
load, you can tell if there is a problem between the radio and the power
supply.

: Given other ways in which I have seen people exploit some of The Internet's
: capabilities to disrupt or indulge in sophistry, or to exploit a medium
: that resembles speech without the non-verbal and intonation cues, etc
: as a means of denigrating others, I question your use, albeit in quotes,
: of the word "remote". I'm not saying it isn't remote and therefore it is
: great, I'm just saying that I don't think we can easily classify it as
: remote, moderate, or great.

I think you can build up quite a good picture based on what someone says and on their posting patterns. I don't think "The Internet" (capitals, no less) is as opaque a medium as you make it out to be.

: It is not easy to determine the validity of all information on The
: Internet without making use of extra supplementary information.

: We do have the problem, pointed out by someone else, of the possibly
: "too perfect" textbook characteristics of what is being posted.

I explained that one, but I don't mind explaining it again (you don't mind having it explained again to you, do you now?). The reason my "symptoms" are such a perfect fit to the textbook is because the people causing the campaign "fitted me up" in such a way that what they did would resemble the symptoms of schizophrenia. Hence TV, radio, other media, people in the streets etc. By a fortunate coincidence (for them) these mthods of harassment are the ones which offer easiest channels of access (for them).

It's really quite neat. All it takes is for people to start believing that the "symptoms" aren't symptoms but reality, though, and the house of cards collapses in a heap. And there are _lots_ of people now who knoiw full well what has gone on.

: If harrassment by email, etc, has happened by someone out of the country,
: can a complaint be made that results in arrest or whatever upon that
: person's entry into the country? An interesting point which Mike may be
: able to inform us about, as he's said he will be in the UK in a few weeks
: time.

Picture the scene at the airport;
"I arrest you for being Mike Corley and mailbombing people"

"But my name isn't Corley. Who he? Mailbombing isn't illegal is it? You'd have to lock up a lot of people if sending annoying email was a crime"

"Er....."

: context-free parts of articles, conversations and things-on-the-TV and

: assume they are meant for you. Mike, this is called paranoia.

But that's the way real abuse works, too. People interject words and phrases into what they say which they know will have meaning for the listener.

And sometimes, they make it obvious. The very first evening of my job in Oxford, we went for a drink with the technical director, and a couple of other employees. The TD said in an "as-if" aside to one of the others, "Is this the bloke who's been on TV?" (he said it directly in front of me, and obviously meant mke to hear him saying it). The other person replied, "Yes, I think so".

I think the subtext of what the TD said was "Why are they bothering with him? He's so insignificant, why would they possibly want to spend the resources going after him and putting all that expensive technology in his home, when there must be much better targets?". The Technical Director was given to sometimes disrespecting people, you see, and in my case he couldn't see the point of anyone expending money on harassing me.

"Unprecedented" hits the nail on the head. It _is_ unprecedented, but we have only just reached the technical stage at which it is feasible, and we know video-spying is done to other people (NB the Diana-Hewitt episode) and is a routine tool of security agencies.

Perhaps what is unprecedented is not the technical side, but the social manipulation of many people by a concealed element in what other countries would be called the secret police. The most disturbing element is the degree to which people allow themselves to be unquestioningly manipulated by an evil element within the state.

Peter Ceresole (peter@cara.demon.co.uk) wrote:
: In article <Ds0L1o.BMF.0.bloor@torfree.net>,
: bu765@torfree.net (Mike Corley) quoted a typical, overblown Bernard Levin
: piece, which sounds exactly like any number of other pieces by Levin over
: the past thirty years.

: He then goes on to draw an anguished parallel with a totally unrelated
: incident that had happened between him and a friend a few days earlier.

It is in the same style as his other pieces, but it's so close to what actually happened a few days previously, that it's completely reasonable to assume that someone told Levin about the meeting, hammed it up a little bit and motivated him to write that article.

Look at the parallels;

1. "madman running loose about London"

2. it's about a meeting which took place recently

3. the police are called (he must be controlled, however much that consumes in resources)

4. he might be violent, approach with caution, yes we're laughing but really we're afraid of him, or is it perhaps our own propaganda that we're letting manipulate us

5. he "bursts into tears, and swears it's all true - and it is" a very exaggerated impression of the conclusion of that meeting

Don't worry if you don't believe me, neither my friend to whom I explained this nor my GP believe me either (until the friend found out otherwise!). If someone just presented this to you as I am presenting it now then I wouldn't find it credible (most likely), so it's not until you actually find out it's true that you can find it credible. And by then it's too late, because they've got you in their trap and explained how "funny" the abuse is.

Charlie...If what you are looking for is a single band rig for 2, all you have to decide is if you want it recent enough for computer control, or not, and how much power you want to run.
You can get in for 300 bucks or so with old Kenwoods (TS700 series) or Icom (IC251) or Yaesu (FT221)...If you move up to something like a more recent IC275H, it will run you about double that amount...You get more power, computer control, PL on FM...stuff like that. Some of the other rigs mentioned like the Yaesu 726 and 736 are not 2 meter only rigs.
Another favorite of mine was the Yaesu FT225RD...problem with some of these rigs is that they are now aproaching, or past 20 years old....you may well end up with someone's problem rig. A really great multimode rig that is new enough to have a tone board (option) and has a real hot receiver....and not too expensive is the Kenwood TR751A. Although it is a smaller 12 volt mobile rig....it has feet for desktop use...so would work out great!
....Dave

: >The (remote) possibility remains that 'Mike Corley' is either
: >not schizophrenic (but is 'pretending' to be so) or 'he' is
: >a product of a number of persons (?psychology students).

: Given other ways in which I have seen people exploit some of The Internet's
: capabilities to disrupt or indulge in sophistry, or to exploit a medium
: that resembles speech without the non-verbal and intonation cues, etc
: as a means of denigrating others, I question your use, albeit in quotes,
: of the word "remote". I'm not saying it isn't remote and therefore it is
: great, I'm just saying that I don't think we can easily classify it as
: remote, moderate, or great.

I think you can build up quite a good picture based on what someone says and on their posting patterns. I don't think "The Internet" (capitals, no less) is as opaque a medium as you make it out to be.

: It is not easy to determine the validity of all information on The
: Internet without making use of extra supplementary information.

: We do have the problem, pointed out by someone else, of the possibly
: "too perfect" textbook characteristics of what is being posted.

I explained that one, but I don't mind explaining it again (you don't mind having it explained again to you, do you now?). The reason my "symptoms" are such a perfect fit to the textbook is because the people causing the campaign "fitted me up" in such a way that what they did would resemble the symptoms of schizophrenia. Hence TV, radio, other media, people in the streets etc. By a fortunate coincidence (for them) these mthods of harassment are the ones which offer easiest channels of access (for them).

It's really quite neat. All it takes is for people to start believing that the "symptoms" aren't symptoms but reality, though, and the house of cards collapses in a heap. And there are _lots_ of people now who knoiw full well what has gone on.

: If harrassment by email, etc, has happened by someone out of the country,
: can a complaint be made that results in arrest or whatever upon that
: person's entry into the country? An interesting point which Mike may be
: able to inform us about, as he's said he will be in the UK in a few weeks
: time.

Picture the scene at the airport;
"I arrest you for being Mike Corley and mailbombing people"

"But my name isn't Corley. Who he? Mailbombing isn't illegal is it? You'd have to lock up a lot of people if sending annoying email was a crime"

"Er....."

: context-free parts of articles, conversations and things-on-the-TV and
: assume they are meant for you. Mike, this is called paranoia.

But that's the way real abuse works, too. People interject words and phrases into what they say which they know will have meaning for the listener.

And sometimes, they make it obvious. The very first evening of my job in Oxford, we went for a drink with the technical director, and a couple of other employees. The TD said in an "as-if" aside to one of the others, "Is this the bloke who's been on TV?" (he said it directly in front of me, and obviously meant mke to hear him saying it). The other person replied, "Yes, I think so".

I think the subtext of what the TD said was "Why are they bothering with him? He's so insignificant, why would they possibly want to spend the resources going after him and putting all that expensive technology in his home, when there must be much better targets?". The Technical Director was given to sometimes disrespecting people, you see, and in my case he couldn't see the point of anyone expending money on harassing me.

: The point is that there are two possibilities happening here-

: 1. There's a large conspiracy of people out to get you, for no
:   other reason than that they have the means to do so, and that
:   it involves a lot of the Media & a proportion of the public

: 2. You (who admit to having some headspace problems) are suffering
:   from acute paranoid schizophrenia.

: Possibility #1 is _possible_, but would be unprecendented (OTOH,
: how would we know?), unfeasible, and many other things beginning
: with _un_ which I can't think of at the moment. Besides, if there
: was something going on, chances are some of us here would know
: about it, and I'm convinced that nobody does.

"Unprecedented" hits the nail on the head. It _is_ unprecedented, but we
have only just reached the technical stage at which it is feasible, and
we know video-spying is done to other people (NB the Diana-Hewitt
episode) and is a routine tool of security agencies.

Perhaps what is unprecedented is not the technical side, but the social
manipulation of many people by a concealed element in what other
countries would be called the secret police. The most disturbing element
is the degree to which people allow themselves to be unquestioningly
manipulated by an evil element within the state.

Peter Ceresole (peter@cara.demon.co.uk) wrote:
: In article <Ds0L1o.BMF.0.bloor@torfree.net>,
: bu765@torfree.net (Mike Corley) quoted a typical, overblown Bernard Levin
: piece, which sounds exactly like any number of other pieces by Levin over
: the past thirty years.

: He then goes on to draw an anguished parallel with a totally unrelated
: incident that had happened between him and a friend a few days earlier.

It is in the same style as his other pieces, but it's so close to what actually happened a few days previously, that it's completely reasonable to assume that someone told Levin about the meeting, hammed it up a little bit and motivated him to write that article.

Look at the parallels;

1. "madman running loose about London"

2. it's about a meeting which took place recently

3. the police are called (he must be controlled, however much that consumes in resources)

4. he might be violent, approach with caution, yes we're laughing but really we're afraid of him, or is it perhaps our own propaganda that we're letting manipulate us

5. he "bursts into tears, and swears it's all true - and it is" a very exaggerated impression of the conclusion of that meeting

Don't worry if you don't believe me, neither my friend to whom I explained this nor my GP believe me either (until the friend found out otherwise!). If someone just presented this to you as I am presenting it now then I wouldn't find it credible (most likely), so it's not until you actually find out it's true that you can find it credible. And by then it's too late, because they've got you in their trap and explained how "funny" the abuse is.

Given that Mr Corley clearly holds a certain fascination for some people,
and that his website, although "informative",  isn't  exactly  ideal  for
```

encouraging discussion of the sort that we all enjoy so much (including Mike himself, by the look of things), would anyone be up for a Mike Corley newsgroup - uk.fan.mike-corley, alt.fan.mike-corley, whatever? (Sorry, I'm not very well up on these things.)

This would be a perfect place for Mike to post his writings, and perhaps the occasional "look at the ...mike-corley newsgroup" posting in uk.misc and so on would be accepted in place of the current cross-posts.

Sad, confused and emotional disturbed Mike Corley wrote:

            { snip }

Because he has made himself into a martyr and now he finds it impossible to back down. Mike's big secret has now been exposed. He made everything up.

Every time Mike makes allegations against the police, MI5, Tom-Dick-and-Harry etc. those organisations have taken people off vitally important work to ascertain whether or not there was any substance in Mike's ranting allegations.

When I'm told by someone who really does know such things that there was never any plot to get Mike then I trust that person sufficiently enough to accept his word.

The problem is Mike has escalated matters to an extreme level and like many silly billys he will find it impossible to give up all his self created crap and to live a normal life. After all what can Mike do now this crap has been exposed as untrue ? What new cause can Mike dedicate himself to ? (Some might read that as: who else can Mike now start upsetting ?)

So Mike write to John Major, c/o the Private Secretary, 10 Downing Street, London SW1A 2AA and ask the Prime Minister to help you. I'd normally disclose his fax numbers but if I did that you might jam up the lines with abusive postings just like you do here on Usenet.

Is anyone interested in joining with me to do a mass e-mailing of protests to Anon Penet and to Toronto Free Net in an attempt to flood their computer systems thus forcing them to seriously consider pulling the plug on Mike ? I'm not sure but is my proposal called a "flame" ?

Perhaps we should give Mike 7 days from today (6 July 96) to come to his senses and they start a massive multiple E-mailing campaign to Toronto Free Net. If all us victims send multiple copies of E-mails to the right addresses in Toronto then perhaps the Canadians will begin to get the appropriate message.

Copy e-mailed to Mike, just so he knows what is coming if he persists.

I see. So they're not wasting six years of manpower to persecute you. They're wasting six years of manpower to prove I'm _not_ being persecuted.

I wish I was clever enough to think of something like that. I really, really do.

>When I'm told by someone who really does know such things that there was
>never any plot to get Mike then I trust that person sufficiently enough to
>accept his word.

Come on "Big Ears", why don't you admit that you made this posting? This is exactly the same line you were feeding me a few months ago. The posts are from the same news server, it's even the same newsreading software (Forte Agent .99e/16.227).

I'm afraid that if you friend "in the know" denied the existence of a plot then he was being, as they say, economical with the truth. Judging by the extreme reaction in London in May, and the panic you're showing now, as well as the replay post yesterday, I would say that things are hotting up again. But for you this time, not for me. I am out of harm's way, and there is very little you can do as long as I stay out of the UK.

Sad, confused and emotional disturbed Mike Corley wrote:

{ snip }

Because he has made himself into a martyr and now he finds it impossible to back down. Mike's big secret has now been exposed. He made everything up.

Every time Mike makes allegations against the police, MI5, Tom-Dick-and-Harry etc. those organisations have taken people off vitally important work to ascertain whether or not there was any substance in Mike's ranting allegations.

When I'm told by someone who really does know such things that there was never any plot to get Mike then I trust that person sufficiently enough to accept his word.

The problem is Mike has escalated matters to an extreme level and like many silly billys he will find it impossible to give up all his self created crap and to live a normal life. After all what can Mike do now this crap has been exposed as untrue ? What new cause can Mike dedicate himself to ? (Some might read that as: who else can Mike now start upsetting ?)

So Mike write to John Major, c/o the Private Secretary, 10 Downing Street, London SW1A 2AA and ask the Prime Minister to help you. I'd normally disclose his fax numbers but if I did that you might jam up the lines with abusive postings just like you do here on Usenet.

Is anyone interested in joining with me to do a mass e-mailing of protests to Anon Penet and to Toronto Free Net in an attempt to flood their computer systems thus forcing them to seriously consider pulling the plug on Mike ? I'm not sure but is my proposal called a "flame" ?

Can't disagree with that sentiment.

Wasn't it documented that MI5 sometimes "bought" journalists and broadcasters?
I remember reading a report by some jouralist who had been offered an extra
tax-free income by MI5 to become their covert mouthpiece, and had refused.

Bet you lots of others didn't refuse. Why do you think MI5 have such easy
access to the BBC and media? Because they're directly paying them off, that's why.

It has been reported several times. The most recent was in Private Eye,
a few months back. As I recall they also wanted information from him;
journalists would be a natural choice for members of the Security Service
and the Secret Intelligence Service for information sources.

> It might be interesting to see what he had to say regarding their
> attempt to recruit him.

He was most concerned that many others would have accepted such an
offer. However, we can probably make an educated guess as to some of
those who accepted: Nigel West (Rupert Allason, MP) and Chapman Pincher
would come near to the top of the list.

This is true. I frequently employ private detectives to spy on people (there's a good reason for this and I'll tell you if you guess correctly) and one such detective showed me the latest technology only last week. A small rucksack. One strap of the rucksack has a tiny hole in it that you wouldn't notice unless someone pointed to it. That's the camera: the wires lead into the rucksack itself where there is a video tape recorder little bigger than a Walkman. I don't know if that's what Roger Cook uses but it certainly explains why it is that the subject can look straight into the lens and not realise (s)he's being filmed. Now, I say "latest technology" and I think that's the technology that the police use as well as the retired police who become private detectives, but no doubt the security services have far more sophisticated equipment.

: >Corley's allegations are true, there needs to be evidence of two
: >things. Firstly, there must be evidence of subversive activity on
: >his part. Secondly, there needs to be evidence of MI5 taking
: >measures to counter this subversive activity, in proportion to the
: >magnitude of the threat posed. Upon reading Mike Corley's posts,

: Alan,

: What about the following scenario? MI5 conducts "experiments" including
: field trials of novel surveillance methods. Say there was a "research
: project" underway to see just how invasive a surveillance of an
: individual could be. Perhaps it wasn't research, perhaps it was for
: training of novice personnel. Either way, there is a sizeable risk of
: detection. In order to minimise the consequences of this, you choose
: someone who is out of the public eye, and if possible someone whose
: credibility is already damaged - by diagnosis of schizophrenia, for example.
: This will facilitate the "plausible denial" if something goes wrong.

: I think this would be closer to Mike's theory.

: Mike, if you are reading, please don't post the story again. Anyone can
: read it at [snip] if they are interested. Also, don't
: think that I actually *believe* the above. On cost alone, it is extremely
: unlikely to be true, and some elements of the story (people in the media
: being "in on it") are just too crazy (though I can see how the paranoia
: builds to the extent that you can see "them" everywhere).

My argument is that the fact that it's so totally crazy is what makes it so
plausible and so hard to prove.

I shall continue to try to find ways to kick down the house of cards. Because
it is a brittle structure. It only needs one person to corroborate, and then
it's all over.

: P.S. Anyone else ever thought of "what-ifs" along the same lines? I
: remember as a boy daydreaming that maybe I was the focus of national
: attention in a "let's follow the life of one person from life to
: death" study - that while I was out or in bed there were programmes on
: the television about my life so far, etc. It makes for a good fiction,

Perhaps MI5 have become victims of their own paranoia. Their agency has been
thought of as acting disreputably, so when their decision arrives, they don't
think twice about breaking the law. Whereas say CSIS (the Canadian equivalent)
is at pains to point out how it would never ever do anything in contravention

of the law, and how it is strictly controlled in what it does and how it does it.

If this matter does ever make it into the public gaze, then it won't just be a few individuals in the media or security service who'll get hit. The UK is supposed to be a civilized democratic country (East Germany called themselves a democracy and they had the Stasi, but anyway). In a civilized country these things shouldn't be happening - and it is ultimately Parliament and the government who are answerable for not imposing sufficient restraints and accountability on those who are supposed to be ensuring security for citizens, not jeopardising it.
....

>from florid schizophrenia, you'll know how difficult it can be to
>'argue' with them.

I don't have florid symptoms. But I'm in a difficult situation, because those people who don't know, aren't going to believe, and those who do, they just go along with the crowd. It's never a good idea to go against the grain, and the grain here is defined by interests in the establishment and the media. Even people who could say out loud what was happening won't, because then there's a risk that they'll be seen as traitors and ostracised.

Usually this type of 'hidden abuse' is racial and targetted at a racial minority within a country. You keep the minorities out of the good jobs, but you don't admit discrimination exists. It happens everywhere, not just in Britain. The persecution that is going on now is in reality a refined form of racism. Instead of "nigger" it's "nutter", and abusing the mentally ill is still socially acceptable today. In 50 years it might not be, but today there isn't any social or legal sanction against it.

So really they've refined racial harassment down to a minority of one. The words may be different, but the methods are the same.

Considering he spammed it far and wide (well, at least to alt.angst and
alt.folklore.urban which I saw and each of those included other groups
in the Newsgroups line) I doubt he'll be seen anywhere for long. Using
the xs4all remailer doesn't really help if you post the url to a
web site which makes it clear who you are.

Nuala, who thinks that the sad thing is he used frames much better
than many sites done by supposedly 'sane' people.

(sent 20/11/96)
Subject: No Justice for those with mental illness
Newsgroups: uk.misc,uk.legal
Organization: Toronto Free-Net
Summary:
Keywords:

Well, the "legal option" has just foundered on the rock of lawyers refusing to deal with me on the grounds that my perception of harassment must be due to the disease.

So we're back to square one again, the same place we were two years ago.

Now perhaps one of our uk.legal participants can clarify this point. To me it seems illogical that lawyers should have the final say on whether you are allowed to proceed with a civil case or not. Is there a default mechanism or agency for cases such as mine where it is difficult to find a solicitor to represent you? What exactly is the "official Solicitor"? What is it possible to do if you can't find a lawyer to represent you?

A chance to get a useful response out of the uk newsgroups! perhaps they can be good for something else besides spamming.

....

Represent yourself....like the defendants in the McLibel trial.
you will need to read some law..but you CAN legally represent yourself I believe.
Mike W.
....
From: burridge@osiris.win-uk.net (Paul Burridge)

Yes, a lot of people do this nowadays. Saves on legal fees too. Lots of reading up required first, though.

What can I do to get competent legal help though? If the case is on the face of it so bizarre that no solicitor would represent me or talk to me, then surely there must be a default mechanism? What is the "official Solicitor" that's been mentioned?
....

All you need do is go to a good library & read up about it - that's what the McLibel 2 did.

Subject: "Absolute Obscene" David Hepworth (GLR)
Newsgroups: uk.misc,uk.legal,alt.radio.uk,uk.media,uk.media.radio.misc
Organization: Toronto Free-Net
Summary:
Keywords:
```

Last night (21/Feb/97), I was listening to BBC GLR. You have to understand that I was listening by stealth. Back in 1990 I used to have Capital blaring out of the speakers all over the garden ("if he listens to Capital then he can't be all bad", thanks ever so much). But now I listen on my walkman on headphones with the volume turned right down. It could not possibly be overheard by any listening device, no matter how sensitive, because sound does not carry from the headphones.

Yet somehow they are still able to tell which station I am listening to on the walkman. And last night, I bravely tuned to GLR 94.9FM at around 8.45pm. Everything went well for the first half hour or so. The DJ (today GLR told me it was David Hepworth) had a "rock star spelling competition" (how do you spell

Shakespear's Sister?), no trouble there. I was recording the show onto tape just in case anything unpleasant happened, as I had reason to think it might.

Around 9.10pm, it did. Here, precisely, is what Hepworth said after the song "Come Around" by the Muttonbirds (I have this on tape, and at some point will be posting the audio on my website);

"New album's called 'Envy of Angels', that comes out soon, that's the single that's already out, I would imagine, that's 'Come Around', the Muttonbirds, er, coming up after this, we got the rock-and-roll A-level, we have, I assume, Brian do we have an embarrassment of prizes in there, we do, don't we, (EMPHASIS) absolute obscene (END-EMPHASIS) amounts of prizes, there will no doubt be a riot at the back door", and that's, er, A-level coming up after this"

The key phrases in what he said are, "EMBARRASSMENT of prizes", and what he himself emphasized verbally, "ABSOLUTE OBSCENE amount of prizes". It is my belief (based on content and tone of voice) that when he spoke these phrases he knew I was listening, and that the phrases refer directly to my situation. The "EMBARRASSMENT" is the embarrassment he and other media people would feel at having their wrongdoing exposed; the "ABSOLUTE OBSCENE" (which he verbally emphasized) described the disgusting sexual abuse which the harassers have been throwing at me.

Needless to say, I can't prove this is what he meant, although this has happened enough times that it's hard not to recognise it when you see it. But I shall be sending him a copy of this explanation. We'll see what he has to say for himself.

I will try to explain with greater clarity.

I am prone to have ideas of "interactive watching" by people on TV, and "interactive listening" by people on the radio; which means as I listen to their programme, they are aware that I am listening (because my home is spied on, and those doing the spying phone up the radio station and tell them that I am listening to them), and they then interject nasty remarks in what they say. This is what I believe may have happened on Friday night with GLR, and what I was trying to explain in my article.

It's happened before with other radio stations, most worryingly when I am listening quietly on my walkman as happened on Friday. This time, the interjected words were "embarrassment" and "absolute obscene". The "absolute obscene" referred to the abuse which is currently being directed at me.

I hope that's a little clearer.

....

But it is possible that those two sets of interjected words could have validly referred to something else.

> I hope that's a little clearer.

Subject: "Scandalous, Frivolous or Vexatious"
Newsgroups: uk.misc,uk.legal
Organization: Toronto Free-Net
Summary:
Keywords:

A couple of weeks ago I issued a summons against the BBC in my local county court, for the tort of private nuisance caused by the spying by their newsreaders on my home. My argument was that their spying had prevented me watching the news at home, and therefore interfered with my normal use of my home.

The BBC's Litigation Dept at White City have replied not with a defence, but with an application for my claim to be struck out because;

(a) it discloses no reasonable cause of action; and/or
(b) it is scandalous, frivolous or vexatious.

Their application will be heard next week. They have not made any affidavit in support of their application, nor have they given particulars as to why they consider my summons to be unarguable in law, which would be a necessary condition for there to be no reasonable cause of action.

I am more worried about point (b). Allegations are scandalous (says Stuart Sime's book) if they impute dishonesty against another party; which my allegations do, against the BBC's newsreaders. As for frivolous or vexatious, I think that will be up to me to make a good argument for the effect the BBC's spying has had on my life, and up to the district judge's opinion of my case.

Apparently seeking to have a claim struck out in this way is common practice when the plaintiff is a litigant-in-person. Even if it is struck out, there is always the opportunity to appeal. I think we could be in for a fight next week.

I'm not so fond of the threats of violence against the persistent (yet
quiet for a bit, and probably soon to restart..) spammer that is Mike
Corley. Yet, encouraging the fantasies of the mentally ill isn't
exactly healthy either. Do you go up to homeless mad people as say
things like: "They're coming to get you", or "Look out behind you?".

Smid

....

Quite the contary Mike. Your recent posts have been no problem. By
explaining things rationally, and not spamming us, you have made more
friends than you know.

I hope that you sort out your problem, sincerely.

Yep. Just not, the, I think 180 posts, one week, when his illness got really bad. Oh yeah, and there was only three real posts, just repeated 60 times.

>Mike does a first class job of drawing out the real personality
>of the person hiding behind a node name. The way people react

Erm, explain this rather dubious statement.

>As for you. Don't you think it's a trifle condescending to refer
>to people as mad. I know they are homeless and without internet
>access, but maybe they are just eccentric.

Congratulations. This is my first real flame for about a year.

I try to control my anger when I come across another uninformed naive idiot on usenet, but sometimes it goes free. We've had Corley for well over three years now, and his constant spams of various degrees have killed a couple of usenet groups I really rather lied. uk.media, to name but one. I gets my goat to read another useless fucker thinking he is a harmless eccentric.

Mike is mentally ill. He is unwilling to deal with it. He seems to think that uk.misc is some sort of forum that MI5 reads. And it should be avenged. He's mailbombed a large quantity of people, because they opposed his spamming.

1. He thinks MI5 watches him through his television
2. He thinks all references to mad people, refer to him
3. He thinks all people shouting, are shouting at him.
4. He's been diagnosed as mentally ill, just not a paranoid schizophrenic.
5. He gives not a shit about any newsgroups he abuses.
6. He goes through quiet periods, then _very_ nasty periods.
7. All evidence of this great conspiracy is laughable, to say the least.
8. He gives internet/usenet a bad name to the media. Including mailbombing Chris Tarrant and faxing various celebrities.

I do not condescend to him. I actually know what he does, and has done in the past, and am frankly not too respectful of him. He can be openly referred to as "mad" because he is. Let's check my mailbox saves:

Repost of when I thought I'd seen the last of loopy mike:

>MC had seen the light and stopped spamming.

He hadn't seen the light at all. His level of spamming had got to
such outrageous proportions that we had to mount a concerted
attempt to get his account(s) closed. The reason for the lack of
spam lately is that Mike has been furiously swotting up on Law so
he can bring an action as a LIP against the BBC (all solicitors
having quite rightly and honourably declined to act for him). When
this course of action is exhausted without result, I confidently
predict that we will once again be the innocent victims of his ire
and the spamming will commence again.

Subject: I am being ignored
Newsgroups: uk.misc,uk.legal
Organization: Toronto Free-Net
Summary:
Keywords:

Something mildly unusual is happening. Nobody has been getting at me for the last couple of weeks. Best of all, about three weeks ago I bought a video recorder to try to get some evidence from the News etc, and despite having watched Martyn Lewis, Michael Buerk and the whole lot of them, not one of them has said anything to me in the last three weeks. And I have been listening to and recording Capital, with no ill effect. All in all, I am being comprehensively ignored.

Of course, I should have video-taped the news programmes back in 1990/91/92 (and even 93) when it was still all going on. Anthony Johnsson (casually name-drop to stick the knife in) will tell you how intelligent a person I am, yet I didn't have the good sense to record the programmes at the time, and it's a bit late now.

Today another avenue of exploration closed when my second summons against the

BBC was struck out (basically through lack of evidence), and an order was made by the district judge saying that I could not sue John Birt again without the express permission of the court. She explained that this was for my own good, to save me the summons fees. Costs were not awarded though (the BBC didn't even really seek costs), and I am free to sue anyone else I take a shine to.

....

It is not that you are being ignored.... it is just that as your mental health improves, so your paranoia eases.

OR...

The dark forces are gathering strength for the final battle with you...

Seriously though, it's nice to see you back - cos as long as they are persecuting you, I can relax knowing they haven't got time to bother me!

Mike Corley (bu765@torfree.net) wrote:

[unreasonable optimism snipped]

Well, that didn't last very long, did it?

Capital Radio this evening approx 8.35pm, Neil Long's programme a few moments after I switched to it (I am listening to it as I type this). The following spouted from his mouth;

"want to see Jacko in town? what a gig it's going to be, that guy is amazing, and PSYCHOTIC, but amazing on stage, 0171-4200958, on stage he's a MADMAN but he's wonderful"

God, I am so tired of this. It's been going on for seven years. When's it going to stop?

I have the above extract on tape. When I get around to it I will post it, and the Hepworth snippet, as audio files on the website. Of course, all the doubting Thomases and Smids can carry on doubting, because the mere fact that moments after switching on the DJ starts talking about "psychotic", that's not proof is it?

I wrote an aggrieved letter to Chris Tarrant at Capital and sent it off today, copied to Richard Park, Group Director of Programmes. I suppose they'll just lie as usual. Bastards, basically.

....

The solution is surely to not have a TV, video, radio or telephone in the house, Mike. That way they can't be used to watch you.

No. I tried that strategy in 1990/91 when I sold my television and stopped listening to the radio. It didn't work because they got at me through co-workers and eventually the general public.

The solution is to gather evidence by recording everything, and then complain or sue if possible. I wish I'd recorded it all five or six years ago, then I might be more successful in a legal action now.

....

Did anyone else watch the X-Files on Sky last night (Sunday 13th April) and recognise Mike's symptons in the chap with the tattoo? It was quite interesting to see someone responding in precisely the same way, picking up on individual words and phrases in ordinary sentences and applying parts to themselves as though they were intended.

Not a pleasant ending though. You take care, Mike, and keep taking the medication. uk.misc just wouldn't be the same without you now.

No, it isn't, but you knew that anyway.

Mike, how is it that you think that this can't be a coincidence because it happened 'moments' after you switched on the radio? Haven't you just told us that you haven't heard a thing for two weeks? Going two weeks watching TV & listening to the radio without a reference to 'mad', 'crazy' or 'loony' is quite an acheivement, especially given the trashy radio you seem to prefer.

I've just spent a lot of the weekend trying to keep a manic depressive under control, so that she doesn't have to go back into hospital and lose the last few months' memories to ECT. One thing I've noticed is that manic depressives almost seek to foster their fantasies, they enjoy the control and the high. You seem to be the same - you refuse to answer the points put to you that explain away what you call persecution totally - do you have the courage of your convictions to reply to this? Or do you enjoy the attention your illness brings you?

Do please tell the *truth*. It has been longer than *2* weeks as I'm sure you have noticed, hasn't it ?

Well I claim responsibility for the absence of persecution. When I rang John Major's personal private secretary, not the personal political one or any of the others in the same office, and I said you would vote for the Conservative Party at the General Election the secretary said Johnny would be so happy and as a sign of gratitude he rang-up the Head of MI5 and told them to save money for tax cuts by abandoning forthwith their campaign against you. Consequently MI5 and MI6 have been able to redeploy urgently needed resources (i.e. manpower and telecoms interceptions) against an international band of (*****censored*****).

On behalf of the law-abiding and decent citizens in the British islands, I would like to sincerely thank you for your invaluable contribution to crime fighting by your instrumental achievement in releasing badly needed and very scarce MI5 and MI6 resources.

Many thanks,

Please don't forget it is National Election time and the news broadcasts
at 21:00 on BBC1 are preoccupied with British politics.

Perhaps it is for the best. Now that it is all over, you can return to
Canada. Did you manage to get your Canadian citizenship ?   What did your
contracts at MI5 say about you becoming Canadian ?   You never did mention
the name of your MI5 liaison officer nor of any of the others.

That's true. But as it is now all over there is no need to worry about
the past. MI5 said your file has been removed from the Registry and put
in a burn-bag so there is nothing left for anyone ever to find.

By the way, what was the URL of your famous Corley web site ?

I have to admit that it is actually mildly amusing to have newsreaders watching you, although it is tiresome after a bit. I am currently in an interesting situation, because after my lawsuits against them I think the BBC newscasters have stopped watching me entirely; I also think that ITN, in particular John Suchet, *are* still watching but they're being subtle about it (his blink pattern followed mine).

Being called nasty words is quite horrible though, and seems gratuitous; what do they gain by it, except to exercise their sadism?

You have. They're not pleasant atmospheres, especially the secure wings, which have more in common with prisons ('airlock' doors, list of 'banned' articles, continuous observation). They have to be that way, unfortunately.

>Uh-oh. Peak Practice slagging you off as well now, eh Mike?

You better believe it. Tuesday's episode had one of its characters being labelled as a "lunatic" with "something wrong with them". I changed channels rapidly at this point, but in retrospect perhaps I should have carried on watching and taped the program.

A few days ago I bought a video recorder (about time too) for evidence gathering purposes. But strangely the TV news (both BBC and ITN) haven't uttered a sound over the last few days. Almost as if they know they're being taped...

>You better believe it. Tuesday's episode had one of its characters being
>labelled as a "lunatic" with "something wrong with them".

And?

There are many characters in TV programmes who _are_ lunatics with 'something wrong with them'. Why do you think this alludes to you?

In the eponymous book, Cervantes' Don Quixote is described as 'crazy' 'mad' and 'lunatic'. Do you think this is a reference to yourself, albeit written by a time-travelling 17th century Spaniard?

If you accept that the character of Don Quixote can be described thus without it being a reference to you, what problem do you have with Peak Practice? Or do you enjoy tilting at your own little windmills?

A friend's lodger has turned out to be paranoid schizophrenic. Her obsessions are strikingly similar to yours, she is convinced that she is being bugged, and that students at her college are making fun of her for being foreign. She has been looking for the services of a private detective. Maybe Oxford has this unfortunate effect on foreigners?

I must say that I'm surviving rather well, or that's what the man under the stairs told me yesterday.

Subject: The Continuing Silence
Newsgroups: uk.misc
Organization: Toronto Free-Net
Summary:
Keywords:

The silence continues. I am enjoying listening to Radio 4 without any ill effects whatsoever. Admittedly I am recording every moment, but still. Even better, I have fished out a recording from ITN last year which at the time I was convinced had been about me, and on re-seeing it I am now convinced it is not about me at all.

But that is not to disclaim all the many "live incidents" that have happened. Everything written on my website is true. For the newcomers, its URL (as seen in the Observer and Private Eye) is

[snip]
....

Victor Lewis-Smith has broken the silence in his TV review column "Goon and best forgotten" in the Evening Standard (on Thursday 8/May). He said, "If I sound paranoid, that's probably because I once worked there. Eventually, I had to leave because they were all trying to kill me but, for sheer pathological hatred of the Corporation, I couldn't hold a candle to Spike Milligan".

I take this to be about me, because recently I wrote to both the BBC and Capital Radio, saying "I believe the current purpose of the harassment is to force me to kill myself to prevent the harassers, yourselves included, from being brought to justice, and last year there were several incidents of people shouting 'suicide' at me, which would appear to corroborate that view." I think VLS's words about the BBC "all trying to kill me" shows he has seen or heard of what I sent to the BBC or Capital.

Nasty eh? I believe that VLS or his mates read this newsgroup. I wonder how he would explain his article?

....

Erm, Mike, I'm a bit of a fan of Victor Lewis-Smith, ever since his days of "BuyGones". I must admit, he often likes to play the flawed lunatic evil nasty person. He's been doing it for years, with prank calls, far before your illness. Its his act. He wouldn't be VLS without it.

He doesn't like the "Goons" either. It isn't about you.

>I take this to be about me, because recently I wrote to both the BBC and

I don't think Victor Lewis-Smith has worked for the BBC (or Capital) for several years (1994 was the last time...), so the connection, is paranoia here.

Personally, I believe VLS as a person of reasonable integrity, who wouldn't give a fuck about you...

>Nasty eh? I believe that VLS or his mates read this newsgroup. I wonder how he
>would explain his article?

Keep up the medication, not as many people read this newsgroup as you think, even though you are now incorporating that into your illness.

Victor? Are you there?

Subject: David Hepworth (GLR) is taking the piss
Newsgroups: uk.misc
Organization: Toronto Free-Net
Summary:
Keywords:

>Last night (21/Feb/97), I was listening to BBC GLR. You have to understand that
>I was listening by stealth. Back in 1990 I used to have Capital blaring out of

Not much changes. Today I was listening again to David Hepworth's show on GLR, having more or less waded in on it by accident. Here is the exchange;

David: "we have executive drivetime, we have Brian in charge of the prize cupboard. Brian it's not a bad prize cupboard this week is it?"

Brian: "no David it's an absolute (EMPHASIS) embarrassment (END-EMPHASIS) of prizes this evening" (laughter)

David: "what have we got?"

Brian: "well in my left hand alone we've got that .... Gary Clale, I don't know if you remember him obviously still alive and kicking...."

David: "Rock and roll spelling test is your first opportunity to take advantage of this embarrassment of prizes"

What do I read into this exchange? The laughter after the word "embarrassment" shows they're aware of the last complaint I made on usenet (copied by snail-mail to them). The "left hand" business is I think a coded way of calling me a w***er (the term would be better applied to Brian and David).

I have a tape of this exchange, and will eventually get around to posting it on the website.

I don't understand. Why has nobody replied to this post? You keep on asking for evidence, then I present you with something that looks very much like evidence, and everybody just ignores it. OK I haven't posted the actual sound extract, and it still isn't proof.

Perhaps everybody just finds it all too boring and dull. Should I start spamming again from one of those nice anonymous remailers to wake everyone up? Now there's a thought.

....

Mike Corley <bu765@torfree.net> wrote:

Cos you don't reply to our points - you're ignoring us, why shouldn't we ignore you?

>You keep on asking for evidence, then I present you with something
>that looks very much like evidence,

No you don't, you post something which could _never_, _ever_ be construed as referring to yourself. Can't you see it? No, of course you can't, you've an illness.

>Perhaps everybody just finds it all too boring and dull. Should I start
>spamming again from one of those nice anonymous remailers to wake everyone up?
>Now there's a thought.

And I see you've started. Give it a rest, Mike, unless you're prepared to enter into proper discussion.

Overview

What all these snatches of video and audio, and newspaper articles, have in common is that none of them provide conclusive or very convincing evidence of their being directed against me, or forming part of a campaign against me. Other people with my illness doubtless could produce similar non-proof if they were minded to do so.

Good, now we've got the disclaimer out of the way, we can describe precisely what it is that is on display in this part of the site. In the video section, we have Quicktime (MPEG-4) clips of Jon Snow of ITN in action, also interviews with Ken Clarke and John Major of the ousted Tory regime. These are embedded in the page using QuickTime. While each audio/video clip is coded to automatically download the QuickTime player, you may find it helpful to download QuickTime from Apple's website before you start viewing the media files.

Note that each item is awarded a rating of the confidence I feel that it is directed at me, expressed as a percentage. Items with 50% or more are probably about me; 100% indicates a "dead cert".

In audio we have MP3 files of harassment at work in Canada in late 1996, also GLR's David Hepworth not even trying to pretend that he isn't getting at me, and a snippet of Capital. There is also an album track which I have taken as being about me. The newspapers section contains articles by Bernard Levin on his encounter with a madman who "bursts into tears, and swears it is all true - and it is". Also a Private Eye cover, and snippet from Victor Lewis-Smith.

I have added several recordings of abuse "in public". By Sept/1998 I had seven minidiscs of such recordings, unfortunately containing mostly very nasty sexual slanders which I will not be publishing on this website. The recordings were made on a Sony Minidisc Walkman MZ-R30, which I purchased in Canada in July/1997, with ECM-T140 microphone. After both the MZ-R30 and the microphone reached the end of their lives, in June/2001 I purchased as replacement my current recording gear, an MZ-R900 walkman with ECM-T145 microphone.

Share and Enjoy! I hope you enjoy partaking in my delusions which have been recorded with high fidelity digital equipment and presented for your listening pleasure.

Ken Clarke (1), April 1997

Certainty level: 30%

The first of two video segments from the same program, this shows Jon Snow interviewing Ken Clarke in April 1997, during the general election campaign. The following exchange is heard;

Jon Snow: "You say we are booming in your posters, the bust's around the corner"

Ken Clarke: "You took that from three years ago, when I was being advised to do all kinds of mad things to stimulate the economy, and being told that I had to take desperate measures to get it going"

At this time I was watching television almost continuously at home, with a video recorder whirring away, trying to obtain from the newscasters a reaction which would give them away. I think this is an instance where it happened. Ken Clarke first darts a glance straight at the video camera (and perhaps at a monitor next to it showing my living room), then comes out with "all kinds of mad things", while engaging in a facial display involving raising of eyebrows and lowering of eyelids. To me at the time, and also now, it looked as if he was selecting a context into which he could drop the word "mad" as a directed insult against me.

Ken Clarke (2), April 1997

Certainty level: 30%

The second of two video segments from the same programme, this shows Ken Clarke during the election campaign. He makes the following statement;

"we have a party, and we have a Cabinet which has produced a manifesto consistent with our policy of the last five years;
people are challenging us on the basis there's been some monstrous conspiracy between all the politicians to guide us we know not where,
we know where we're going, we wish to be a leading influence in the European Union"

It should be fairly obvious what I read into in the above sentences. The "monstrous conspiracy between all the politicians" could of course apply to the public perception of closer European integration, but I took it as referring to the conspiracy of politicians and media people against me. Again, facial expression comes into it; as Clarke speaks of the "monstrous conspiracy" his eyebrows twitch and it is clear that something or somebody is being made fun of.

Dimbleby / John Major, April 1997

Certainty level: 90%

Dimbleby interviews John Major during the election campaign. Here is the exchange, regarding Neil Hamilton, the "sleazy" Tory candidate;

Dimbleby: "It's a direct quotation from what he said to Sir Gordon Downey and what he said to his local newspaper, the Knutsford Guardian".
Major: "Well, heaven forfend that I should doubt what the Knutsford Guardian actually said"
Dimbleby: "Well I should hope so"
Major: "Absolutely, it would be quite unforgivable to doubt the Knutsford Guardian"

What I find in this segment is an assonance between "Knutsford" and "Nut" or "Nuts". I think Dimbleby deliberately invents the play on words, and says it clearly enough for Major to pick it up and repeat it.
You can gauge Dimbleby's intent from his facial expression of false honesty when he uses the words "Knutsford Guardian"; and Major's reaction follows from his recognition of Dimbleby's intent; Major smiles and says it would be "unforgivable to doubt the Knutsford Guardian".
These are much clearer on the original video than on this Quicktime clip.

Channel Four TV News - 12/Feb/1999

Certainty level: 100%

I am positively, utterly, completely sure this item is about me. It's a bit subtle so the objective reader might not understand my certainty. Here is what happened. I was watching Channel Four News with Jon Snow, on the day Clinton "got off" (as it were) in the Monica-gate scandal. Snow said;

"[and we're anticipating that the President himself will make his] first comments after the trial in which he has now been cleared at around half-past seven. So we'll have more on the historic judgment, we'll also be considering [starts smiling] the winners and losers in this whole sorry saga. Now further doubts have been...."

When Snow said "half-past seven", I looked at the clock on the mantelpiece above the TV. Snow saw my glance, and in reaction to my glance at the clock, smiled. I think he was smiling at what he perceived as my self-importance.

Usually when newscasters or radio presenters laugh at me, there is an excuse for their laughter; usually they manage to find some reason for my being "funny"; their amusement is blamed on me; it is my "fault" they are laughing. And so it was with this instance; Jon Snow thought it was funny that I should be so interested in seeing Clinton, and his half-smile while reading the words "winners and losers" expresses that.

I wrote to Snow at ITN shortly after this broadcast to ask him about his behaviour; of course, he didn't reply.

Chris Tarrant - 10/March/1999

Certainty level: 25%

This one might be aimed at me, or it might be tinged with a whiff of intent, although I only give one chance in four for Tarrant's thoughts being aimed at me when he said this. During his "Who wants to be a Millionaire" TV show in March 1999, he said;

if you're watching the show jumping up and down screaming at the telly, remember you could be here. You can either seek professional help or call us...

The background is as follows. In early March I'd sent a quantity of emails to Capital FM, the London radio station where Mr Tarrant has his breakfast show. They were addressed to the email account which Mr Tarrant used to read emails posted on Capital's website. Capital objected to the quantity of emails - in fact, they contacted the Metropolitan Police's Computer Crime unit, who, in turn, "felt my collar" by giving me a verbal warning over the phone to cease this behaviour.

The emails contained the words which I had heard Mr Tarrant speak in early 1994, namely;

"You know this bloke? He says we're trying to kill him.
We should be done for attempted manslaughter".

At the time of writing (May 1999), the Police have not told me what aspect of the emails was "illegal", nor despite my repeated urging have they questioned Mr Tarrant about his remarks from 1994.

Regarding the clip from Tarrant's show above. The Police spoke to me on the afternoon of Wednesday 10 March 1999. Tarrant's live show went out that same evening. The Police have told me that after speaking to me they told Capital FM that they'd spoken to me regarding the emails. So Tarrant would have known by the time of the show who'd sent the emails and why.... and it's quite possible that his remarks about "seeking professional help" were aimed at me personally following my attempts to persuade him to own up to his 1994 remarks.

I have an iQue 3600 for trade if anyone have a short wave such as
Yaesu FR 7 or Panasonic rf4800 etc they are not useing and would like
to trade for a ODA GPS with all the software and CDs
I paid 165 for the unit and would like to trade compareable for a good
receiver.

Please reply to

ryesnake@yahoo.com

Many thanks for looking

Chris Tarrant - 10/March/1999

Certainty level: 25%

This one might be aimed at me, or it might be tinged with a whiff of intent, although I only give one chance in four for Tarrant's thoughts being aimed at me when he said this. During his "Who wants to be a Millionaire" TV show in March 1999, he said;

if you're watching the show jumping up and down screaming at the telly, remember you could be here. You can either seek professional help or call us...

The background is as follows. In early March I'd sent a quantity of emails to Capital FM, the London radio station where Mr Tarrant has his breakfast show. They were addressed to the email account which Mr Tarrant used to read emails posted on Capital's website. Capital objected to the quantity of emails - in fact, they contacted the Metropolitan Police's Computer Crime unit, who, in turn, "felt my collar" by giving me a verbal warning over the phone to cease this behaviour.

The emails contained the words which I had heard Mr Tarrant speak in early 1994, namely;

"You know this bloke? He says we're trying to kill him.
We should be done for attempted manslaughter".

At the time of writing (May 1999), the Police have not told me what aspect of the emails was "illegal", nor despite my repeated urging have they questioned Mr Tarrant about his remarks from 1994.

Regarding the clip from Tarrant's show above. The Police spoke to me on the afternoon of Wednesday 10 March 1999. Tarrant's live show went out that same evening. The Police have told me that after speaking to me they told Capital FM that they'd spoken to me regarding the emails. So Tarrant would have known by the time of the show who'd sent the emails and why.... and it's quite possible that his remarks about "seeking professional help" were aimed at me personally following my attempts to persuade him to own up to his 1994 remarks.

I've had a few VHF/UHF radio's over the years...Icom...Kenwood &
Yaesu...and I still have a FDK (don't ask)...The Yaesu FT-736R imo is
the tops...

PS: According to most on here a real radio amateur would have a "G" at
the beginning of his callsign!!!...

PPS: A real radio amateur wouldn't cross post!!!...according to most on
here...

Dear "RHF,"

There were two variants of the original GE Superadio Model 7-2880: the first one without a strap to hold the batteries in place (they fall out if the battery cover is even loose) and no antenna screw terminals, and the second one with both of those improvements. Otherwise, the two variants are identical and carry the same model number.

Best,

Joe

If you're looking for used, give preference to radio's which have a Mutek front-end build in.

I prefer the Yaesu FT736-R (with Mutek) over many other radio's, however this is personal.
Guess the fact that you don't often see them used is a sign?
If you want the very best look for something like a TS850+transverter (SSB Electronics LT2+ or DB6NT) but that will cost you.

To get into the VHF scene in Europe check into the ON4KST site at www.on4kst.com/chat Lots of info can be gotten there as well as real-time propagation and activity info.

I haven't found a single second hand SSB LT2S or DB6NT TR144H for sale
in the last 4 years, so good luck!

Jack

Hi.
I found used a perfect JRC 135. Seller says it's a, so called, HP version,
an evolution with a lot of enhancements, recognizable from white dots on
radio knobs.
Can someone explain differences between standard and HP version and  ways to
identify both radios (maybe serial number).
Thank's for anwers.
Rob.

```

Good afternoon, all...

Have any of you seen any magazine articles or web sites that discuss adding IF DSP filtering to any off-the-shelf commercial radios?

I have an Icom IC-735 and Yaesu FT-1000 that could benefit from that treatment (even though I gotta say the noise blanker in the IC-735 is amazing for 25+ year old technology).

Conceptually it doesn't seem like it should be too difficult... tap in to the IF stream somewhere, direct it out to an external DSP box (or perhaps even a small internal DSP board if there is room... I think the 735 has enough internal room for that) and then the output of the DSP board goes back into the IF stream.

I have 30+ years' experience in software development, mostly real time systems, but none at all in DSPs so I thought this might be a good DSP project for me to learn on.

But, I'd like to read up on whatever results others might have had in doing similar efforts.

Any thoughts on that would be appreciated...

I'd like to design and build a CW keyer board to install in my IC-735 ... last one I saw on ebay went for like $160 and I don't think I'm going to pay that... :-)

Anybody know where I can get enough information on the interface to the radio to do that, along with perhaps the right connectors to mate with whatever the connections are in the radio?

Or, does anyone know of an aftermarket keyer board that's available for something a bit more reasonable than $160?

Thanks...

Andrio - Your situation is axactly like mine. G5RV, 2nd floor etc. The only difference is that there is so much rock all around my property hat in most cases I cannnot get an 18" ground rod down either   After much experimentaton, here's what I settled on:

Antennas:
I use an 80 m dipole with 'big ugly balun' and its coax shield is bonded to a 40' large diameter aluminium cable buried in a 18" ditch.

I use a 20 m dipole with 'big ugly balun' and its coax shield is bonded to ther 40' aluminium cable buried in the ditch.
I use an old 5-band cushcraft vertical with 15 radial wires laid out in a hub-and-spoke pattern - and the coax shield of the vertical is bonded to the same ground as all the other antennas before entering the house.

I had been using a G5RV but could never get a good VSWR and typically had RFI around the house.

These antennas are ~40' from the shack and work as well as, or better than the G5RV. Also, the G5RV tended to have more noise on receive (probably as a result of it being closer to the house). The RFI in the house problem has diminished. The G5RV was supposed to have the twin-lead portion laid out directly under the antenna (vertical) and I never could accomodate that very well given that the antenna was 28' up and the twin-lead was longer.

Grounding: Grounded the radio on the AC ground inside the shack Rig has auto antenna tuner so that's the best I can do. I use a PC in the shack and it is well bonded to the same copper connection plate as the radios - and a single line from that plate to the ground pin on the nearest AC receptacle.
I get no interference into the HF radio from PC or vice-versa.

I've experimented with a MFJ RF isolator and not seen any improvement. Keep us informed on whjat you decide to do - maybe some suggestions you get could help me optimize this shack as well.

Time was the ICOM 751 (with Mutek) was the only VHR multiband to have.

My 736 is deaf as a post on 70cm, BTW. Good job it has a mast head pre-amp
switch (and power thru the antenna socket) on the front panel - it certainly
needs it. Not so on 2 or 6m though.

Rick,
It really depends on what you want to do.
If you just want to add it for receiving it is not hard to add except
that the AGC in most receivers is not set up to limit the voltage applied
to the first analog to digital converter. This needs to be done badly.
Filtering, amplification, detection, and audio processing can be done
straightforwardly. However, you will have to add or subtract Hz from
or add them to your frequency display yourself! Further because of
the filters that come before your ADC, you probably will not have as
good a control over the phase of the pass band as you could with a
different design. Probably simplest to just buy a T-T Jupiter and
use its general coverage characteristics right after the first IF of your
rig.
Now if you also want to add the DSP to the transmitting part, it gets even
more
complicated.

Full integration achieves much, much more than an IF strip DSP add-on,
as my Orion 565 has shown me. Take a look at its architecture or the
Flexradio 1000/5000
or the Omni VII or the Elecraft K3 for examples of what you get. If you
want
to program, you might want to get a Flexradio SDR 1000 which has an open
source code version.
73,
Ed, N5EI

The FT480-R was a good radio but the push switches on the front panel
are worked by conductive 'rubber' which , now , are starting to fall
appart .allong with other funny faults occuring . nice set for your
qrz.com blag photo , bet there's not many who have the 480/780 and
the combined stand/power supply unit , would polish up a treat :-)

G ..

That's a shame, if it was a boxed and complete LT2S in good condition,
I'd get my wallet out :-)

Anybody else? LT2S or DB6NT.

73

You would also need a much fatter wallet.

But for 1/3 or less the price you can't put this in a box and add a
couple of relays?

I'm only interested in a good condition (preferably as new), complete
and un-modified LT2S or DB6NT TR144. I will pay accordingly.

Jack

I knew that's what you meant...

I've had a few old Icoms and had nothing but problems with dry solder joints...I'm sticking with the FT-736R...outperforms my FT-847...

An amateur has the opportunity to purchase or build equipment to operate SSB on one of the following bands:

2 m
1 1/4 m
70 cm

You may assume that the amateur will have access to a horizontally-polarized antenna with 15 dBi of gain.

Which band will provide the most operating fun? (I will leave the reader to his own devices in defining what 'fun' means. Please explain your definition in any replies.)

2 meters will usually provide the most contacts in many areas. It is possiable to get some eskip for contacts halfway across the country.

1 1/4 meters has very little activity on it as almost no comercial gear is on that band in the US.

70 cm has more activity than 1 1/4 meters but long distance contacts are much harder to come by than 2 meters.

It is no fun to just call cq and not have any contacts.

Hi ..
  Over the last two or three weeks i have noticed my TS 870 is taking
less current than usual.. maybe 13 amps, maybe 14 as far as i can tell ,
but never more .. .. so i and another local amateur tested the RF output
with a nice power meter / dummy load
The results were even across the board, 160 right up to 10m (my usual
haunt) any mode, except for AM of course, -
  about 65w - 70w. everywhere.

I was doing research before i bought an '870 and a couple of people
mentioned the 870's generally dont give 100w,
but ck, its less than 3dB difference, but we tested the 870 2 years ago
when i bought it, and it was giving more RF out then,

it was drawing nearly 18A, and correspondingly more RF too, except that
it seems the PA is getting weaker.

My main use for the radio is local chatting on 10m FM 90% of the time at
lowest power, strangely when on full power i got occasional fuse blows..
though i know not to waffle on 100w FM, though the 870 spec and users
report its ok to do so for about a hour.
i cont fancy trying that.
I phoned Kenwood UK shortly after i bought the set asking why they don't
give 100w, he said it depends on the load, of course, so no problem

Question, does anyone thing my PA is dying on the 870 ?
  - it looks bad... although the thing works perfectly otherwise.

Mark.

Have you tried resetting all the PA bias levels on the pots inside? You might have an oxidized connection somewhere, possibly inside a pot, on a connector pin or a crimp, even a cracked solder joint that causes the lower levels and the occasional burst of full power. I've seen similar symptoms in other radios that went away after exercising (turn all the way one direction, then all the way the other direction a few times with the power off) related adjustment pots or finding a bad crimp or cracked solder joint.

Thanks to everyone who responded, I will bear in mind all your
comments. I have few months to decide before I have the cash. On
with the research!

Charlie.

Hi Gwatts.. thanks for the quick post :)

No, i have'nt tchecked the PA bias or any pots for that matter- i shall
have a check around later.. i have the service manual and will study it
later on tonight ..   the idea of twiddling pots worries me, i will
check all the connectors and stuff and get the magnifying glass /
voltmeter out later if the service manual makes sense to me
Thanks..

Hi.
 I have a old Murphy radio, type 154 and I found the diagram showing
that  its valves, are.
 6F15,   6C9 , 6LD20, 6P25, UU6.
 I wrote to a specialized store and was given a list of these valves,
as equivalents.
10F1 , 10F9 , 10LD11 , 10P14 , U404.
 Do you know, if it so?
 Regards,
 Theodore.

Must depend on where you are.  144.200 is most often used in many areas.
Then qsy after a short time.

> Mark.

Hi, Mark,

gwatts gave a very good suggestion. Several months back my 870 was doing the same thing and it turned out to be that the negative lead of the power supply cable was so badly oxidized that is was essentially an open circuit and the rig was getting its negative connection to the power supply through the ground on the back panel.

You need to check that power supply cable and the voltage drop across it and see if it is in a similar condition. If that cable was ever used to connect to a battery it may have turned black already and any splices, joints, or connectors on it could be corroded and high resistance.

Regards,

Al W6LX

RM Italy has a Ham range designated by the H in HLA300, The amplifier has
both ptt switching and carrier operated relay. These amplifiers have auto
band selection and manual band selection options. The selection system
inserts the appropriate LPF to keep the amp clean. The power claim is 300W
CW and 500W PEP. My experience is that although my Daiwa cross needle meter
only ever showed around the low side of 300W on the PEP selection of the
meter, the amplifier has a significant presence when in use. Working JA
stations form South Africa on 40m with a rotatable dipole proved to be quite
comfortable and signal reports were similar to what I get from my ACOM 1000
running at 400W.

Hi Al.. and Thanks for the reply...
interesting answers coming my way.. what a great radio it is, but i
read 'all' the postings on this NG last night,
and it was interesting.

The supply cable is in very good condition, far as i can tell, but i
will peel back the black PVC bit on the radio end tonight,
and also check inside. the crappy CB quality fuse holders were hot
last time i attempted 100w FM,
they were glowing once on my old FT 890 AT radio - the PSU seemed to
cope with that set.
there are 3 or 4 clip-on ferrite's on the 870's DC cable already - which
is nice.

i don't have a ground here, i am on the 3rd storey, so a non-inductive
ground would be pretty tricky to organize.
and 99% of my QSO's are local rag chews on 10m anyway. but i will bond
to the cold water system this evening, but i know that may be next to
useless here.
The voltage drop at the PSU terminals is, of course 0.2 of a volt or so,
not really worth mentioning - but if i take the lid off the 870
later i guess i should be able to check for any drop inside the TRX. i
may also just 'build up' around the fuse holders with solder too,
this may help. seems the PSU lead is clean, the guy i bought the 870 off
of was using a PSU too. its a 2001/2002 serial 870 too.
i did fit another 4ft of red/black 25A DC cable via HD connectors
earlier this year, but didn't keep them on long, though it seemed ok.
i guess i need to test the cable under load.
last night on 10m FM i got the PSU supplying 15A - 16A which i guess is
on for 10m, but depending on the ATU / load it usually
draws approx 10A no matter what. strange. 14A - 70w ish on a dummy load
seems a little low, i guess i should use a amp..
but on 10m :) i will keep doing tests, my next test may be to take the
set to a friends QTH and use his PSU / ant..

Thanks Al. and Gwatts -
i shall do more digging   :)
Mark

I must have missed something?  The seller never posted this auction
on the newsgroups.  It started
as a discussion about the receiver, not as an auction teaser.

Pete

> concepts, as I seem to remember it uses one or more tunnel diodes.

Not really. You'd think the tunnel diode would have been used for the LO,
but it's the mixer! Perhaps the tunnel diode was significantly less noisy,
but the EFM-117 is not an exceptionally sensitive radio -- merely good.

Get over it ,,chuck it in the bin ,old and outdated like many of the
cretins on here ,
Spend some money u tight git get a good radio.
Regards
Zakdingle

Just goes to show that YOU really don't understand the technology
that your dealing with...... Maybe a few courses in Modern
Radio Design, would help you understand how the PLL System
works in an FT480R.....

You left chips and pretzels? The only ones I could find
were under the seat cushions.

Jeff

Which bits of it do you say that I don't understand?

Loop stability in control systems, perhaps? Lead/Lag
compensation? Triple loop PLLs to give 10Hz steps but
without the final loop stepping in 10Hz?

What exactly?

Tunnel diodes were supposed to be excellent mixers, with low noise and good IMD characteristics. In fact, the IEEE proposed a sat TV service in the late '60s, using 30 foot sat dishes, and a tunnel diode mixer front end. I was so expensive that it was never built.

Repairing old gear can be fun - and lets face it - most "hams" or "Cber's" for that matter don't have the "equipment" to repair the newer stuff with SMD devices. Parts are still fairly easy to get - with the Internet. Usually you can find it with some luck.
Though I do newer equipment repairs - my eyes prefer the older stuff - much more. I have some older tube gear that I've had for projects for quite some time now - been too busy to do them. Am awaiting the day I can start on them and see the warm glow and listen to the audio coming forth.

L.

Hopefully someone who reads this group will be familiar with these radios, Motorola T7400 FRS/GMRS. The alt.radio.family newsgroup has degenerated to an unintellible level.

My friend and I have a set of these, which work extremely well as general-purpose handhelds (much better range than our IC-Q7s, and only cost $20 a pair after rebate). We'd like to use the T7400s for bike-to-bike communications on motorcycle trips. Our plan is to mount small speakers inside the helmets, and a microphone element in the lower face guard, to reduce wind noise. There would be a PTT switch, most likely mounted near one of the handgrips.

What we can't seem to find are the required tech specs on the speaker and microphone elements, or a wiring diagram for the single plug that connects everything to the radio. I'm aware that some radios short the mic element with a resistor to actuate PTT, but need a lot more specifics for this model.

thanks and regards,

Martin

So you come here to help kill this newsgroup?

When people can't be bothered to stick to the topic of a newsgroup,
that's what kills it.

You don't see any irony in bothering this newsgroup with an off-topic
matter because some other newsgroup has been destroyed by off-topic
matter?

  Michael VE2BVW

It is the part where the PLL Frequency doesn't change because you
at using FM Simplex. There are many reasons for the PLL to change
between Tx and Rx, even with the radio in FM Simplex mode.

1.   The receiver may have an IF Frequency of 10.7 Mhz which would

require the PLL to be offset from the Receive Frequncy by the IF Frequency,

2. The Transmitter exciter may use a different Offset Frequency than the Receiver IF Frequency, and most Transmitters don't modulate the Tx Output Frequency directly, but modulate an IF Frequency that is, either "mixed" to the Tx Frequency, or "multiplied" to the Tx Frequency.

Just to name a few. Now Sir please, expound your brilliance on why you made such a Stupid Comment in the Original Post, as sited above...........

That's nice, but it's merely a Superadio III... I believe they're discussing the Superadio+, (model 7-2882_).

Wrong model. It's not a 288*7*, but a much older *GE* 288_2_ and the
2882 was not an analog tuning radio, it was direct entry frequency
synthesis.

Martin; Are the 7400's capable of GMRS repeater operation? If so, where did you buy them?

Martin wrote:

>Hopefully someone who reads this group will be familiar with these radios, Motorola T7400 FRS/GMRS. The alt.radio.family newsgroup has degenerated to an unintellible level.
>
>My friend and I have a set of these, which work extremely well as general-purpose handhelds (much better range than our IC-Q7s, and only cost $20 a pair after rebate). We'd like to use the T7400s for bike-to-bike communications on motorcycle trips. Our plan is to mount small speakers inside the helmets, and a microphone element in the lower face guard, to reduce wind noise. There would be a PTT switch, most likely mounted near one of the handgrips.
>
>What we can't seem to find are the required tech specs on the speaker and microphone elements, or a wiring diagram for the single plug that connects everything to the radio. I'm aware that some radios short the mic element with a resistor to actuate PTT, but need a lot more specifics for this model.

For One and All,

.

Which Are The "Actual" GE Superadios ?

- - - - -and- - - - -
Which Are The 'So-Called' GE Superadios ?
 .
OK - Here are the actual GE Superadio Model Numbers :
 .
1 - GE {Superadio I} Model # 7-2880
"The Original" GE SUPERADIO I = "Super Radio"
-but- It did not have The Words "Superadio" on the Radio [.]
General Electric Model # 7-2880
Speaker: Single/One 5".
Single Band Width.
Knobs: Black Body with Chrome Base Ring.
Size: 13"W - 9"H - 3.25"D
Badging 'General (GE) Electric' on the speaker grill.
Printed on the Tuning Band Scale: "Long Range" & "High Selectivity"
Made in HONG KONG and other locations
 .
2 - GE Superadio I I Model # 7-2885
The GE SR II = GE SUPERADIO II = "Super Radio"
General Electric Model # 7-2885
Speakers: Dual 5" and 1".
Single Band Width.
Knobs: Chrome (color) Body including the bases.
Size 13"W - 9"H - 3.25"D.
Badging: General (GE) Electric "SUPERADIO II" on the speaker grill.
Printed on the Tuning Band Scale: "Long Range" & "High Selectivity"
Made in MALAYSIA and other locations from 1987 until 1994.
 .
3 - GE Superadio I I I Model # 7-2887
The GE SR III = GE SUPERADIO III = "Super Radio"
General Electric Model # 7-2887
Speakers: Dual 6" & 1.5".
Dual Band Widths: Wide & Normal.
Knobs: Black Body with Chrome Base Ring.
Size: 13.5"W - 9"H - 3.75"D.
Badging: "GE" Square on the speaker grill.
Printed on the Tuning Band Scale: "Long Range" & "High Selectivity"
Made In CHINA ?
 .
Here are some 'so-called' GE "Superadio" Model Numbers
they are either Digital / Cassette / Boom Boxes /Radios :
Series - 3-6015 / 3-6025 / 3-6045
Series - 3-5266 / 3-5268 / 3-5280
 .
Model # 3-5280 is the so-called GE {Superadio} Cassette
 .
Model # 7-2882 is the so-called GE Digital {Superadio} Plus
 .
Then there is the 'so-called' GE "Superadio" CUB
Model Number 7-2881 that was 'smaller' than the
GE Superadios and used "C" Batteries
 .
NOTE - The Radio Shack Optimus Models #s 12-603

and/ 12-903 may be 'look-a-likes' on the outside
-but- They do not have the GE Superadios Circuity
on the inside [.]

This is classic radio design, the vast majority of crystal controlled VHF rigs from the seventies and eighties had a separete crystal for TX and RX because of the IF stage in the receiver. Not true of all rigs though. The FDK Multi 2000 as well as a PLL VFO has a number of crystal memories and has a single crystal for each memory, but it's more the exception than the rule - probably done to reduce cost of two crystals rather than one for each channel.

The "OT" designation (which I applied myself) was merely a courtesy by
way of introduction. I don't really consider it to be off-topic.

Most Hams, myself included, tend to be electronics/communications
experimenters, and highly interested in hardware such as I described.
A few may be clueless beyond whatever it took to pass their written,
but they can play netcop.

Hi Joe,

As far as I know, the 7400 radios do not have any frequency-offset
capablity, but I suppose it's possible that there are undocumented
features.  For example, if you engage the "QT" function from the menu,
it layers a tone squelch over the standard CTCSS (actually uses the
```

tone to precede the first transmission), which virtually guarantees that no other extraneous sources will activate the receiver.

I bought them at Fry's Electronics in Dallas, TX. They were $20 per pair, after a $10 rebate. The maker claims 8 miles optimum range, but we tested them and got 10 miles. Here is a link to my review, which also gives the locations and terrain details:
http://groups.google.com/group/alt.radio.family/browse_thread/thread/1a8741=
45cfa4b4e2/dbd2bbab8ffcd1fd?lnk=3Dgst&q=3Dfunkychateauspam&rnum=3D2#dbd2bba=
b8ffcd1fd

These are the only blister-pack radios I have ever tested that beat the manufacturer's range claims. And they did so using rechargeable NiMH batteries, which have a slightly-lower terminal voltage than the alkalines often used to generate the claims. Part of the performance is no doubt due to physical reasons - the chassis is probably twice the size of most FRS radios, and it uses four AA batteries instead of the now-typical AAAs. I'd say these radios are far more likely than most to actually deliver their rated output power. And perhaps they have a good receiver section as well, plus enough chassis mass for the antenna to work properly. For whatever reason, the peformance was outstanding for something that retailed for $10 per unit.

best regards,

Martin

Hi Joe,

As far as I know, the 7400 radios do not have any frequency-offset
capablity, but I suppose it's possible that there are undocumented
features.  For example, if you engage the "QT" function from the menu,
```

it layers a tone squelch over the standard CTCSS (actually uses the tone to precede the first transmission), which virtually guarantees that no other extraneous sources will activate the receiver.

I bought them at Fry's Electronics in Dallas, TX. They were $20 per pair, after a $10 rebate. The maker claims 8 miles optimum range, but we tested them and got 10 miles. Here is a link to my review, which also gives the locations and terrain details:
http://groups.google.com/group/alt.radio.family/browse_thread/thread/1a874145cfa4b4e2/dbd2bbab8ffcd1fd?lnk=gst&q=funkychateauspam&rnum=2#dbd2bbab8ffcd1fd

These are the only blister-pack radios I have ever tested that beat the manufacturer's range claims. And they did so using rechargeable NiMH batteries, which have a slightly-lower terminal voltage than the alkalines often used to generate the claims. Part of the performance is no doubt due to physical reasons - the chassis is probably twice the size of most FRS radios, and it uses four AA batteries instead of the now-typical AAAs. I'd say these radios are far more likely than most to actually deliver their rated output power. And perhaps they have a good receiver section as well, plus enough chassis mass for the antenna to work properly. For whatever reason, the peformance was outstanding for something that retailed for $10 per unit.

best regards,

Martin

I bought a couple sets of FRS/GMRS radios and have yet to see them perform to what "I" feel is their capacity. They claim upwards of 8 or so miles - yet I lost contact with someone a hair short of a mile away on flat terrain - and a virtual clear shot. At 3/4 mile, had crystal clear Comms - but past that - nothing.

I don't place any faith in those things - as to range. I bought them to try to stay off of "2 meters" with mundane things and to also use for Emergency Comms with my assistants who aren't licensed and not "authorized" to be on a Public Service band radio - I'll stick with the 2meters. I can do simplex or repeat and not have to worry about losing contact - over the FRS radios. That mile "and more" is very easily covered.

I never got around to it, but I'm going to check mine on my service monitor - to see what they're doing - using AA Alkalines, NiMH and external power source. I know many hunters who use FRS radios (only when hunting) - of different brands, models, Rf power out and range quotes - and they always complain of distance. They're not radio enthusiasts - of any sort. Listening to their reports - quizzing them on their terrain and so on - I can understand their issue. IMHO - I think those radios (at least most) are over rated - a "gadget" item.

L.

In my opinion the Radio Shack 12-903 is similar in design, with very similar performance, but in a package that is far more solidly built. Its audio sounds at least as good and is powerful. Battery life is the same (250 hours). Provision for external antenna. Controls don't wobble around and the platic case is more substantial than the GE which feels 'cheap' in comparison.

I have both the Radio Shack and the GE. The GE is vastly better in terms
of sensitivity and sound quality. I listen to a remote AM station during
the day and the GE is vastly better.

Rick-

If you have a signal generator, you can use it as a local oscillator for
a Ham panadapter.  The Heath SB-620 HamScan can be set up that way.  I
used one many years ago to troubleshoot a Regency HR-6 and BTL-301 spur
problem.

I also had the TS-120S which had spurs.  I took it back to the dealer,
who had a good technician at the time.  Apparently incorporating all the
Kenwood tech bulletins will solve the problem unless you have a
defective component.  Mine was clean as a whistle when I sold it.

I used just that technique to marry my SB620 'Scanalyzer' to my TS-120S and TS-130S xcvrs (with buffer amplifiers inside the xcvrs). The 620's input amplifier has an RFC to ground from the cathode. A capacitor is switched from bypass of the RFC, to coupling from an RCA jack on the rear apron. That turns the input amplifer into a mixer. My '620 came to me setup for Heathkit's 3.395 MHz IF. I made a dead-bug oscillator using a ~ 12 MHz xtal that was intended for a rock-bound 2m xcvr. A slight tweak of the '620's sweep oscillator, and I was in business.

Another potentially inexpensive spectrum analyzer scheme is based on a varactor-tuned frontend from a cable box (it utilizes your generic oscilloscope for display). You can build a basic unit, or add modules for more function. Take a look at http://www.science-workshop.com/, home of the "Poor Man's Spectrum Analyzer".

>Can anyone suggest a decent inexpensive spectrum analyzer, that I can look
>for used on ebay, that would be suitable for evaluating SSB transmitter
>output for spurs, harmonics, etc.?

A few years ago I picked up an HP 8557 analyzer plugin, in a 181T (I think) display mainframe, at a local hamfest. It's simple, and its bandwidth range isn't super-wide by today's standards (it's rated for .01 MHz to 350 MHz), and it isn't the most precisely tuneable or rock-stable analyzer around, but it has been extremely useful over the past few years. It's plenty good enough to look at the HF spectrum and at the basic performance of a 2-meter radio (although it won't tune up far enough to see the third harmonic of 2-meters or to be directly useful on 440).

The tuning dial is analog, and tends to require a tweak to the calibration-zero when you move more than a few MHz away from your previous location. Having a decent crystal calibrator or comb generator isn't a bad idea (I built one using a 10 MHz oscillator can, a 10:1 decade divider, and a MMIC amplifier chain deliberately driven into saturation... works great).

The newer 8557A has a digital frequency display - I don't know whether it's fundamentally any more stable or precise than the analog tuning and indicator dial on the older 8557.

I've used the 8557 to help identify some local QRM problems. Hooked to a directional 2-meter antenna it let us track down the source of a drifty "buzz on the squelch-tail" signal which had been plaguing several local repeaters (turned out to be a bad Ethernet switch, "singing" loudly enough to be heard for miles!).

More expensive, wide-bandwidth spectrum analyzers might not work as well, in your application. A lot of the wideband ones don't work at all below 10 MHz (one of their IF frequencies, I suspect).

My repeater group was recently gifted with a used Tek 491... a wide-band model. It turns out to have a very interesting and significant quirk - the 10-to-200-MHz band uses a non-balanced mixer, and input signals can "blow through" right into the 150-to-250-MHz first IF. This creates some *huge* non-tunable spurs in the display. As a result, I *dis*recommend this model if you have any thought of hooking it up to an antenna and looking at your ambient RF environment... pager and public-safety-band transmissions will show up as non-tunable spurs which can exceed the signal you're looking for!

How does the Radio Shack DX-390 compare to these two for AM and FM performance?

Tnx -- Larry

Superadio is rated at 400 - 500 hours. Not the same at all.

"Radiosrfun" <Radiosrfun@radiosrfun.com> wrote in message news:46bb2429$0$25593$ecde5a14@news.coretel.net...

Repairing old gear can be fun - and lets face it - most "hams" or "Cber's"
for that matter don't have the "equipment" to repair the newer stuff with
SMD devices. Parts are still fairly easy to get - with the Internet.
Usually
you can find it with some luck.
Though I do newer equipment repairs - my eyes prefer the older stuff - much
more. I have some older tube gear that I've had for projects for quite some
time now - been too busy to do them. Am awaiting the day I can start on
them
and see the warm glow and listen to the audio coming forth - along with the
sparks and smoke!

About a month ago I posted an article about my "modified sine wave" inverter and how to get rid of the strong noise it generates across the HF bands.

I got several helpful responses and I thought you might be interested in the results.

I ordered a Sprague 20JX5306A line filter from HSC Electronic Supply (www.halted.com), cut a three-wire extension cord about four inches from the plug end, and inserted the filter.

It works quite well. There is still some noise, around S2 or S3 as contrasted with S8 to S9+ that it was before. There are some other things I can do such as enclosing the inverter and filter in a grounded metal box. But, all in all it works acceptably as is.

For the most part, my experience with FRS radios has been the same as yours - slightly more than toys. I tend to use 2M for short-range communications with other Hams, but it's always handy to have some FRS units on hand to toss to a non-licensed person in a caravan or recreational group. Around here, the FRS band is mostly unused except on Christmas morning and maybe for a week afterwards :)

The Motorola T7400s, though, shocked me with their real-world performance. Especially considering their on-sale price of $20 per PAIR. They met their range claims with margin. Of course, being in a UHF band, they perform no better than you should expect with houses and trees between rubber-duck antennas.

For the most part, my experience with FRS radios has been the same as yours - slightly more than toys. I tend to use 2M for short-range communications with other Hams, but it's always handy to have some FRS units on hand to toss to a non-licensed person in a caravan or recreational group. Around here, the FRS band is mostly unused except on Christmas morning and maybe for a week afterwards :)

The Motorola T7400s, though, shocked me with their real-world performance. Especially considering their on-sale price of $20 per PAIR. They met their range claims with margin. Of course, being in a UHF band, they perform no better than you should expect with houses and trees between rubber-duck antennas.

Martin

Surprisingly - aside from "Hunters" in the woods near my house and across

the river - I can usually pick up people on the radios - talking of
different subjects - keeping track of kids, wives telling the ole man -
dinner is ready, kids talking back and forth, etc. Then going to the local
mall - there are folks using them and as well as at the "Flea Market". So -
at least around here - "dead" they are not.

I don't usually think to look for any other FRS radios now - but should I
bump into a pair of the 7400s - maybe I'll give them a spin.

L.

Point-of-Fact the Circuits may be simular
BUT they are NOT the same [.]

Some have 'claimed' the the RadioShack Radios are
GE Suoeradio IIIs packaged in a RadioShack Shell :
This is NOT the Case [.]

For the time period that their were make the RadioShack
Radios were most likely made by Sangean and are a
Sangean design to 'approximate' a GE Superadio III at
a much lower cost.

As not so 'super' as the GE Superadio III is : It "IS"
better then the Radioshack 'want-to-bees' ~ RHF

I looking to buy a used all mode base rig for two metres at the end
of year and am leaning towards an Icom IC820H. I have looked at the
comments on eHam and it looks as if this rig is a favourite. I
wonder if anyone has/had one and if they have any comments to make
on the rig.

TIA,

Charlie.

PS:I realise that a real radio amateur would buy a tin of biscuits,
eat the biscuits and then build his own rig in the tin from a bag of
components bought at his club's junk sale but I don't eat biscuits.

Yeah.. Nice receiver, beautiful to look at, but the price is kinda of steep.
I suppose for those that have the extra $$$$ it might be okay. But, I think
the market has spoken and 8G's is the limit right now. I was surprised
at the high reserve, which hasn't been revealed!

I've owned most of the popular V/UHF all mode radios including; Icom
IC820, IC821, IC910, IC290D, IC271E, IC271H, IC275E, IC275H, IC251,
IC746, IC7400, IC706 Mk1, IC706 Mk2, IC706 Mk2G, Kenwood TS780,
TR751E, TM255E, TR9000, TR9130, TS711E, TS790E, TS2000E, Yaesu FT736R,
FT726R, FT221R, FT225R, FT847, FT290R, FT290R2, and an FDK Multi 750X.

The Icom 820H is a nice looking radio with a good receiver, but IMO,
without using a decent transverter, you'll probably not beat an Icom
IC275 in terms of receiver performance. I've had 3 x IC275H's (100w
output, ideal for GS35B linears), and I've yet to find anything
better. Icom IC275's also appear to have much better transmitted audio
quality than other Icom rigs of the same era.

For sale: JRC NRD-515 shortwave receiver. This radio has original
optional 455KHZ IF filter board with the 0.6KHz CW filter. Receiver
works very well on all bands. Very clean front panel and all knobs.
Tuning knob is silky smooth. No modifications.
The top cover of the radio had holes for the internal speaker, which
was done by previous owner. Those holes were professionally patched
and small aluminum plate was placed and secured on the internal side
of the cover. The top cover was repainted. Pictures available on
request.
$650 shipped CONUS.
Thanks for your interest. Please reply directly:

It seems odd that, as this radio (supposedly) uses varactor tuning... Why doesn't Thomson go all the way and include full digital tuning? Given the current cheapness of electronics, it should add no more that $10 or $15 to the price.

Varactor tuning is no different from using a mechanical tuning
capacitor. You're just rotating the shaft on a resistor instead.

To make the leap to digitial tuning, you have to have a PLL (Phase
locked loop) and all the attendant dividers, and the display and
lastly, some degree of accuracy for the reference. If the display
reads 930 AM, it really should be 930, not somewhere else.

It really isn't as simple as "Just a couple more parts."

Jeff

I don't think Thomson is even involved in consumer electronics products anymore. I believe they sold off the RCA name to Audiovox, and when you go to the GE brand, you only get info on telephone products. Brand names are totally meaningless these days.

I've got a Sansui T-80 that proves that. It will shift frequency and often goes completely out of band then sometimes back to the wrong frequency on the band and the counter is given voltages that create a gibberish reading for the LCD display driver. All for a varactor or two that are tweaked or fed an out-of spec signal. I don't have any dual displays with a similar problem...my SX-3600s are always displaying the STEREO graphic but that seems to be a common thing for that model.

FS: MINT Grundig FR-200 Emergency Radio
Flashlight, AM, FM, shortwave 3 to 9 MHz and 9 to 22 MHz. Wind-up generator charger for built-in rechargable battery pack. Telescopic whip. VERY sensitive on shortwave. I was pleasantly surprised. Used in just two ice storms this previous winter.
I will sell with a set of NiMH batteries. (This is in addition to the emergency recharables that are already inside the unit.) I will also sell with a Yo-Yo-Vee Portable Reel Antenna. (See http://HamRadioFun.com for details on that antenna.) That's about $25 worth of additional stuff...FREE!
ONLY $29.95 plus $6.95 shipping PRIORITY MAIL shipping. First e-mail gets it!

It would also add to the noise floor, and make most of the advantage of the tuned RF amp front end null. My biggest gripe about the SRIII is the abysmal dial calibration. I've yet to see one that tracks across the dial. And any time I've attempted to calibrate one (I've done dozens) the best I can get it to do is be semi-accurate at the top and bottom, while off by several 10's of KHz in the middle.

It's fundamentally different -- you can change the rotational "position" of the "capacitor" _electrically_, without moving parts.

> To make the leap to digitial tuning, you have to have a PLL (phase

I didn't say that. But I'll gladly allow myself to retroactively be accused of having said that.

Once you have varactor tuning, not much is needed to convert to digital tuning. How about just three parts -- a reference crystal, a custom IC, and an LCD? Digital tuning is pretty simple stuff.

I have a Sony Discman with a complete stereo-FM + AM digital tuner crammed into a tiny case about the volume of your thumb, dangling from the end of the headphone cord. The complete unit sold for $180; the replacement tuner/cable assembly went for $100. Because this device is a cleverly miniaturized piece of electronics, one can assume it's rather more expensive than what a larger, bulkier device would cost.

Is that _necessarily_ so?

On the AM band, the added "noise" would be primarily FM modulation, creating sideband noise not unlike the sideband noise generated by flutter on analog audio recorders. How audible would that be?

If you're referring to adding $10-$15 to the retail price, on the manufacturing level that would be about $1 to $1.50 in additional parts. Possible, but I'd guess the addition of a crystal, a microcomputer, and a display, would probably add more than that. In the end, you would have a very different radio, and not necessarily a better one. Microprocessors add their own problems. These radios do offer great bang for the buck, but honestly I think the term "super" is misapplied.

Does anyone know what the actual AM senitivity of these "super" radio might be. Healthkit used to provide sensitivity for its AM tuners, but so far all they talk about for the GE radio is doubletalk.

I've not seen any quantification of the AM sensitivity on the radio.
However, with the tuned RF stage, it is much more sensitive than most of the
AM/FM only portables on the market. I have one out in my shop on the shelf
that I use for verification of stations when I'm trying to realign a set
that's been overtwiddled. I'll see if I can get at least a uV reading from
my o-scope for a good listenable by-ear signal. I don't have the equipment
for a fancy uV/m or dBuV reading.

I've yet to hear a cheap (or even a multi-hundred dollar) radio with a
perfectly noiseless PLL. My Grundig (a REAL Grundig) Satellite 650 even has
PLL generated noise that brings up the noise floor at least 2-3dB, and it's
filtered and sheilded to the max (and cost $1100 new).

I haven't looked at mine in a couple weeks but as I figured the PLL
would make tuning in some stations more difficult. As they are, the
```

bandwidth position being in wide actually hinders tuning in a little 1 kw signal at 1450 in Notus called KIOV, 1350 KTIK that's more than a kilowatt and even 1490 KCID in Caldwell (*because I live next to a 5 kw DA-N at 1380). If the station was running a narrower signal to start you have to tune in narrow mode first anyway. It's picky that way. Batteries affect that too, FM more pronounced than AM, of course.

The FM antenna screw fell out a long time ago too, tried to replace it and at some point the thing got broken anyway. Good thing it has screw terminals for FM.

There WAS a digital version of the GE superadio, called the superadio plus, made in 1982. It is rumored to be noisier than the analog version (big surprise) and was double the price, which kind of negated the whole cheap-but-sensitive idea behind the superadio series. It was not a big seller, and is somewhat rare today.

SWH,

I have one of the "Digital" versions of the GE Superadio
Model # 7-2882A that was made in Hong Kong an you
are right on all counts.

But it is 'nice' to be able to push a Preset and Listen
to one of your Favorite Radio Stations - Especially
when the GE Superadio III has such a badly aligned
Analog Tuning Scale.

David Moisan's - GE SuperRadio FAQ - Technical Information
http://mysite.verizon.net/vze20h45/radio/superadio/gesr_tech.html

http://mysite.verizon.net/vze20h45/radio/superadio/gesr_faq.html

Currently for the $-Money-$ the Redsun RP2100 AM/MW
Shortwave Radio seems to be one of the 'better' AM/MW
Radios that would 'fit' the Super-Radio characteristics and
has a very good 'mono' FM Tuner and Sound Too !

The "Redsun Shortwave Radios" Group at Yahoo
REDSUN => http://groups.yahoo.com/group/redsun-shortwave-radios/

~ RHF

This model was likely the outgrowth of the 7-4650 clock-radio, which had direct-frequency entry through a keypad plus six presets. Its list price was around $90.

Whoever designed this radio was actually thinking. As the AM and FM bands have numerically unique frequencies, you simply punched in the one you want, and the band automatically switched. You don't have to select AM or FM first.

I'd like to clarify a point in the Superadio FAQ...

"Unlike most AM/FM radios the SR III has additional RF stages..."

I've never seen an FM tuner that didn't have an RF stage (with the exception of a weird direct-conversion circuit shown in the GE Transistor Manual). It would be less-incorrect to say

"Unlike most table or pocket radios, the Superadio's AM tuner has an RF stage for greatly improved sensitivity."

Most AM/FM radios don't have an RF stage. Only higher end home systems and car radios do anymore for the most part. The front ends on your average portable are just an LO section and an input tuning section (antenna). Even average home systems don't have the additional RF stage. Makes for horrid sensitivity and even worse overloading problems close in.

Well, it seems to me we need to check the GE radios against a radio which has a known sensitivity level on the AM band. I have to use my so-called Superradio with a tunable external loop to picked up most stations I want. So it is not very super. And I have the Radio Shack version too. About half the time it has distored audio, and other half it works ok, but with inferior tone. Ok, they are cheap, I'll grant you that. C. Crane and Company advertise a real super radio, the Mini CC radio. Has anyone tried it for $149.95?

Maybe not in the US, but as far as I know their CE division is still
alive.

If you need an external tuned loop, then you need an alignment. If it's an SRIII, then you're probably out of luck. If it's an SRII or SRI, then you can get it properly aligned and it would be pretty much unbeatable for AM and FM reception.

I have a Grundig portable with shortwave that allows you to do that too. Type in 1130 and the radio automatically switches you to 1130 khz MW. Type in 95.50 and it tunes to 95.5 Mhz FM, And so on....

You can also just enter something like 31 or 25 or 49 and it switches you to that desired shortwave band directly. I like that radio. :)

Brenda Ann has a National or two and a well-modified Pioneer TX-6500
tuner she built as I understand (I donated to it). All of the above

would run rings around this thing I am certain. A great DX set by GE
was probably made and it had tubes and was a tombstone.

Show me any commercial FM radio or tuner, at any price, that _doesn't_ have
an RF stage. I find it very, very, very hard to believe that there are such
radios.

I can think of only one _good_ reason for omitting a RF stage, and that only
in digital tuners. As such tuners require a varactor-tuned front end, and
varactors aren't especially linear... Fill in the blank.

I'd like to comment on the phrase "additional RF stage". An RF stage is, of
course, an additional stage compared to a radio without one, but in this
phrase "additional" modifies RF, not stage. I believe a few radios have had
multiple RF stages, but this is uncommon.

After writing the above, I pulled out the manual for my Yaesu ("joy of Hams'
desiring") FT-1000D. It seems the RF stage can be bypassed for reception of
very strong signals. I'm not sure what this proves or disproves with respect
to this discussion, but it's interesting.

Brenda was refering to the AM section of the radio I think.
Most commercial "broadcast" radios now _are_ crap. The
manufacturers figured (probably rightly) that there's nothing
worth listening to on AM, so they don't waste the money in
production to make the AM portion decent.

Bypassed? Look again, I suspect it has a 20 dB attenuator switched
in ahead of it.

Jeff

Nope. The manual -- apparently written by 'murcans -- explicitly says "bypassed". The schematics are so complex I don't have time to unscramble them to confirm or deny.

From Wikipedia:
Later in 2004, Thomson set up a joint venture (TTE) with China's TCL, giving
to TCL all manufacturing of RCA and Thomson television and DVD products and
making TCL the global leader in TV manufacturing. (Thomson still controls
the brands themselves and licenses them to TTE.) At the time, TCL was hailed
as the first Chinese company to compete on the international stage with
large international corporations. Thomson initially retained all marketing
of TTE's products, but transferred that to TTE in 2005.

In December 2006, Thomson agreed to sell its consumer electronics accessory
business, including rights to the RCA name for consumer electronics
accessories, to Audiovox.

So, I guess they are still "alive", if you want to call it that.

Just think what a ground wire of 30 foot represents in terms of wavelength, whatever it may be it will not be an RF ground!

As suggested, the best bet is to go for a balanced antenna such as a dipole or set of dipoles. Use a balun at the antenna and feed with coax straight to your rig/SWR meter. This works well for me in a first floor shack with antennas in the loft.

Charlie.

Was it originally named that by GE or just by later aficionados in their comparisons?

I've got one right here in front of me (GE 7-2882A), and it's labeled as an "electronic tuning FM-AM receiver", not a "superadio plus" or "superadio+".

As far as I know, this was never touted by GE top be a "superadio". Does anyone have pictures of a box or advertising they can share to show GE called it one?

Can anyone suggest a decent inexpensive spectrum analyzer, that I can look for used on ebay, that would be suitable for evaluating SSB transmitter output for spurs, harmonics, etc.?

I have a cheap RM Italy former CB amplifier that has been heavily modified to work on 80 through 10, and has a set of low-pass output filters in a box with a band switch, all of which I am using with my FT-817. Its provenance is suspect, at best, and I'd like to be able to check it from time to time to make sure its output stays clean.

Also I have an old TS-120S that seems to have some serious transmit problems, part of which is probably spurs and harmonics and self-oscillation in the finals and God knows what else.

I don't mind paying a fair price for a good spectrum analyzer but I don't want to pay big bucks for a high-end unit with features I'll never use.

Thanks...

I distinctly remember a digital Superadio Plus. It sold for a very short
time around 1983 or 84? It clearly said "Superadio Plus" on the front panel.

Again, if you open up the average portable, or most cheap home stereos, you
will find only two sections to the FM tuner:

1) Local oscillator
2) Antenna tuning

Same for the AM section.

I have seen very very VERY few portables with an RF amp section for FM. Less
rare were ones with an RF amp for AM, such as the Channel Master 8
transistor sets.

Nope, was referring to both FM and AM sections.

Shoot... a lot of current generation boom boxes and such not only don't have an RF amp in the front end (well.. they sort of do.. more to come), they don't even have an IF. All they are is a very high gain amplifier with a detector. To make an AM radio, they connect an antenna, single section variable capacitor, a power source, and a small audio amp. The whole receiver section is in a three lead package (TO-92?)

As I said, I have the GE 7-2882A sitting right here in front of me, and that is
the
model previously claimed to be the "Superadio Plus". There is no "Superadio Plus"
nametag anywhere on it. The front reads "GENERAL ELECTRIC electronic tuning FM-AM
RECEIVER"

The reason I ask is that I have heard this radio called a "Superadio" in the past
in
other threads and several places on the internet, but no one has ever provided a
picture of this radio's nameplate or any box or literature supporting the claim.
Thus I have to question whether it was marketed as such, or if the name was just
attributed to it later by Superadio fans. I also have the cassette recorder
version
of this radio, and with it came a little flyer describing the new "electronic
tuning
FM-AM receivers", with no "superadio" mention.

Sorry Brenda Ann, I guess I need to see some proof, not someone's 20+ year old
memories to convince me.

Maybe RHF can photograph his radio and share the picture with us if his has the
name
somewhere on it.

Yep, as I get older, I am starting to feel comma anemic, so I have had
to cut down to the barest minimum.

Yes Pete, I have been there many times before, but no one has provided any
pictures,
box art, or advertising to indicate it was indeed marketed as such. Others are
claiming the name is right on the radio itself. Mine is sitting right in front of
me, it has no Superadio nameplate. I only want confirmation I can verify, not to
start a battle.

JM,

You are Right a the GE Model 7-2882_; the so called
"Digital" GE Superadio -or- GE Superadio Plus; does
not have the "Superadio" name on the Radio.

-But- It does have a few of the Superadio features like
the 200mm Ferrite Antenna and the 5-Inch Speaker.
- - - The Look of a GE Superadio ! ? ! ?

However - What Defines a GE Superadio is the RF
and IF Circuitry that is 'internal' to the Radio and
whether the GE Model 7-2882_ has it or not is . . .
To-Be-Determined [.]

? Question ? Does anyone 'know' for sure -if- the
GE Model 7-2882_ has the same 'internal' RF and
IF Circuitry as the GE Superadios I and II ? ? ?

i want to know ~ RHF

Sorry all the Photos of the various GE Superadios
that I had posted to the "longrange" Yahoo Group
{ GE Superadio Group For Connoisseurs] a few
years ago are gone; and i do not know where the

originals are . . . ~ RHF

That's pretty stupid, and I'm sorry that I have to say it. Still, one
does not enter evidence into a court with a statement that "I know
where it is".

Please corroborate your statements in the future, wherever/whenever or
you'll have credibility trouble in a lot of places.

In the amplifier compartment of a 1970s vintage ham radio, if the plate choke in the B+ supply lost some of it's inductance due to some of the coil windings shorting together would it cause the plate tuning capacitor to require less capacitance (such as fully open) to reach resonance?

-Curios.

Radio Abby,

I am so sorry that you are having reading comprehension problems.

I simply confirmed JM"s statements and findings.

Please follow the Posts in the Thread so that you
can make intelligent contributions without resorting
to calling someone "Stupid" when you can not keep
up with the topic as it evolves.

~ RHF

I have a CC radio...It's pretty good, but I wouldn't pay $150.00 for one

(I paid $20.00 for mine). Like the superradio, It exploits the rather
poor sensitivity of most tabletop radios of today by adding an RF stage.
If I were a consumer shopping for a sensitive radio, I'd buy one of the
many shortwave portables on the market in the same price range. They
have just about everything the C Crane radio has and shortwave to boot.

I also have the GE superradios I, II and III. my superradio III is
sensitive but is just about inferior in every other way to the other two
earlier sets. The superradio II is the best of the three for AM DX. I
also have the radio shack version-it appears to be a superradio III with
sloppy attention to proper alignment at the factory.

They exist, and they suck. Look at a low-end boombox and you will find
no RF stage for either AM or FM.

Someone posted pictures on the binaries of the radio, and also the
original box I think as well. That was a couple of years ago.

If this is so, then the manufacturer must assume the product will only be used in areas of high signal strength.

That goes without saying, as AM radios have generally lacked an RF stage for nigh-on to 70 years. It just isn't needed for most local reception.

> I have seen very very VERY few portables with an RF amp section
> for FM. Less rare were ones with an RF amp for AM, such as the
> Channel Master 8 transistor sets.

I'm in a bad position to argue this point, because I rarely (ie, at this point in my life, never) service radios. But what you're saying goes completely against my experience -- and the service manuals for equipment I own.

The 40-year-old Sony FM/AM radios I own (TFM 825 / 850, EFM 117, & others) have RF stages for FM, and none for AM. The schematic for the GE P975A (which I don't own) shows an RF stage for the FM section, none for the AM. Ditto for all the GE clock-radios I've owned.

I went through the Sams TSM-47 transistor-radio book (dated 12/1964), which I purchased to get additional data on the Sony EFM-117 I hoped to restore. Of the 28 models covered, only two AM radios (Ross RE-1902 & Truetone DC3429B) had an RF stage, and _no_ FM radio lacked one.

The RF stage in an FM tuner * performs a number of functions, one of the most-important being to bring up the RF signal to a level where it can override the noise generated in the conversion process. Has the conversion process, and the transistors used to perform it, improved so much that the RF stage can be discarded? I don't know, but I doubt it.

Another function is gain. The lost gain has to be made up somewhere, presumably with another IF stage, which requires parts and has to be aligned, just as an RF stage. The net savings aren't going to amount to much.

An FM tuner without an RF stage would be hopelessly insensitive, to the point where few consumers would find it acceptable ("This-here goddamn radio don't pick up no stations").

I don't like gainsaying someone who regularly services electronic equipment (and who usually knows what they're talking about). But I just don't buy this. (I read Scott Harvey's comments before posting this, and I still find it hard to believe.) Throughout the history of FM radios, an RF stage has been the normal state of affairs.

* By "tuner", I mean the electronics preceding the audio stages. All radios have tuners.

That's pretty much the case, as radio stations are no longer protected, nor
do they give a damn about listeners, outside the city grade contour.

But I have to agree with William on this. I can't remember an FM set that
didn't have an RF amp. Even the cheap tube German sets, known for their
"gutless wonder" circuitry all used 1/2 of an ECC85 for RF amplification on
FM. Transistor sets too. I worked for Sony in the 70's and every FM set had
an RF amp. Granted, most weren't tuned RF stages, but still there was an
amplification stage ahead of the oscillator/mixer.

Beitman's 1950, pp. 10
Beitman's 1950, pp. 14
Beitman's 1950, pp. 40
Beitman's 1967-69 pp. 42 (note the antenna input going directly into the base of the mixer transistor)
Lots more where those came from.

To be fair, a lot of the early SS stuff did have an RF stage, but beginning sometime in the late 60's, it was almost universally dropped, again, accept for better car radios and home stereo tuners/receivers. I have an early Sony FM stereo portable with no RF stage in it. It does OK for what it is, but almost deaf as a post outside a strong signal area.

I had asked for pictures here and in other forums in the past, but to date haven't
seen any.  I have the radio here, and contrary to other claims, there is no
indication on it that it is a "Superadio".

Two classic examples that are common as dirt in the 'old radio' world
are the RCA 68R* series and the Philco 49-905. They are everywhere
so they must have sold millions. Granted they have an additional IF
stage on FM but they are really poor performers.
Philco apparently rethought it with the 50-925 the following year
(same case, etc) and its a pretty good radio.

I live 40-50 miles out from most any FM stations and the difference in
having an RF amp or not means hearing something ...or not...without an
outdoor antenna.

-Bill

It's a tag of legend. Something people add by association and it
sticks. Counsel may step down.

I got this unit in 1967 and have never used it. It has some western electric transformers That audio freaks will pay bucks for but I hate to part it out. Please post if this has any value as a unit.

Of course it was. The second one is fine, but the first one is not. It should be either a question mark or a comma.

Good afternoon...

Any thoughts on a good scanning receiver that covers HF from 2 MHz up, and can be used in SSB and FM modes?

I'd need something with sensitivity and selectivity that's comparable to a decent low-end HF transceiver (e.g. IC-718 or FT-817).

If it had the capability to program its memories via a computer, that would be a nice bonus.

If it had the capability to output its frequency via e.g. RS-232 every time it scans to a new frequency, that would be a REALLY nice bonus (but not expected).

I'm aware of the Icom IC-R75 and IC-R2500, and Yaesu FRG-100B and VR-5000,
but wondered if there is anything else out there (perhaps for slightly
fewer bucks...)

Thanks...

Hmm. An FM/AM IC that might be found in a boombox is Sony's CXA1238, and
even that includes an RF preamp for FM in common-base configuration and
allows connecting a bandpass (or rather bandstop) between RF amp and
mixer.

As far as the poor overload rejection is concerned, this has to do with
weak mixers inside ICs and insufficient RF filtering. A typical config
for a low-end FM receiver would look like this (tuning via varicap
diodes or tuning caps with plastic dielectric):

```
fixed bandpass for all of FM -> RF amp -> 1 tuned tank circuit -> mixer
                                                                    ^
.                                                                   |
                                                                    LO
```

It typically takes a frontend chip with a balanced mixer like the
venerable TA7358P/LA1185 to achieve good results in such a config
(actually the datasheet suggests this and it's commonly used that way).
The most fancy configuration I've seen with this chip is the 4-gang one
found in the Redsun RP2000/2100 and its rebadges:

```
1 tuned tank circuit -> RF amp -> 2 tuned tank circuits -> mixer
                                                             ^
.                                                            |
                                                             LO
```

Unsurprisingly, its FM frontend is reported to be just about bulletproof
for a portable.

FM frontends in dedicated tuners historically had up to 7 or so tuning
gangs, but with later advances in mixers in particular, there are some
models with seemingly modest 4-gang frontends but not so modest
sensitivity and overload handling; many 5-gang tuners in the later 1980s
actually used the additional gang for a tuned LO buffer.

I had my Yeasu FT 50r stolen in 1998 and police brought it back aug 3,
2007.
I have its original battery charger (yaesu) still in working condition
but the radio is completely
dead.
Anyone have an idea on what to check first !!!

Gilles VE2ZTT

William,

There are two factors at work here:

1. IC technology has improved to the point where it is possible to throw together a converter with cheap parts that will behave itself well enough for a manufacturer to eschew an FM RF stage.

2. What we're talking about here is NOT a quality radio. Such an arrangement (FM with no RF stage) will only appear to work well in an big-city urban environment with a whole bunch of 100 KW monster FM stations close by. In the USA, that means places like NYC, Chicago, LA San Francisco, and the like. These radios are sold in grey-market shops, flea markets, and other bazaar-like places in urban centers to unsophisticated and undiscriminating consumers. Take them out of that environment and their shortcomings quickly become apparent. No name-brand manufacturer such as Sony or GE would ever stoop so low on the cheapness scale as this-it is strictly a domain for the no-name brands from China.

BTW, I would say that the Sams book you got underrepresents the number of 1960s transistor sets with AM RF stages. There was a real competition among manufacturers back in those days, and sensitivity was a major selling point. I'd say about 75% of the 1960-1965 era transistor sets I own (most of which are larger than pocket size) have an AM RF stage, and a lot of those are amazingly hot on the AM BC bands-as hot as my better 1930s tube radios in many cases. If you take stock of those that also have shortwave bands, the percentage with AM RF stages jumps to almost 100%

Later on in the decade, the desire for sensitivity seemed to wane in comparison to the desire to market and sell a radio at a low price. For most radios thereafter, that meant bye-bye to an RF stage-which is exactly why the Superradio and CC radios have their market niche now.

-Scott

As a devout, well established bipolar walking fool, sir I had no
READING comprehension problems WHATSOEVER. I asked you simply to do
your homework first, typing second.

My reluctant colleagues will probably agree to themselves and answer
other questions without comment for the most part.

Thou havest nary the piss to join the vinager union, thus verily I
urge your reduction of cocksurity to commence in the uncouth slang of
children past--"chill out, dude".

Thanks for the additional info and clarification. As long as we're talking about dirt-cheap FM radios aimed at urban listeners, I'm not upset.

The Sony EFM-117 in this manual -- which I have several non-working samples of, and owned as a teenager -- has a long ferrite rod, but no AM RF amp.

I need to replace the T/R relay on an FT480R.
(Intermittent Rx, curable by a quick blip on TX)

I don't have an exact replacement, so I'll use a
Varley 12V relay, with suitable mods to the driving cct,
and dangle the relay in the space behind the front panel.

Is there a knack to removing the main board without first
unsoldering the numerous connections? (i.e., can it just
be a tedious job, or must it be downright finicky?)

There is a second pair of change-over contacts on the
relay, but with both outputs wired together...this would seem
to suggest some form of muting effect that deals only with
the T/R or R/T changeover period. Any ideas?

From the circuit diagram:

The relay switches two things:

Antenna (Rx/Tx)

13.8V to the Tone unit.

One side of the relay coil is to the 13.8V internal rail, other side is to the Main Unit and, unless it is very convoluted, isn't connected to either set of relay contacts nor do the two sets of contacts seen to be connected to each other.

I've done one of these before and, as I recall, "pin for pin" relays were available- I think Farnell.

I imagine the design as a whole would be a bit different from the usual
concepts, as I seem to remember it uses one or more tunnel-diodes.

The same cct is used for both RX AGC and TX ALC and
it looks as thought the change-over time between sets of contacts
is used to discharge the cct in preparation for the other mode.

Anyway, anybody done maintenance and know the answer to
lifting out the main board? (The Maintenance Service Manual
offers no help in this regard)

I had to replace a crystal on the PLL board in my FT480R, it wasn't all
that difficult to remove and that might get you access to what you need
on the Main board.

Have you tried getting a replacement relay from Yaesu?  They had my
FT480 crystal and a crystal I needed for an FT290 and they weren't as
expensive as I thought they'd be... " For customer service, technical
support or parts, please call 714-827-7600."

Are you sure the PLL locks when you go back to receive?

An interesting suggestion, thanks....should certainly get me to the
underside
of the main board.

> Have you tried getting a replacement relay from Yaesu? They had my FT480

I've a junk box going back 40 years with some relays....."the most expensive
component already in the junk box is cheaper than the cheapest one you can
buy".....a much more interesting exercise to modify the cct to accomodate
what I have to hand....a 27-year-old rig has no resale value anyway.

No reason the PLL frequency should change between TX and RX
as I'm only using it on FM simplex.

Another symptom is that the RX comes back on but
the squelch gradually becomes ineffective until you're listening to a
low-level noise and the squelch control is inoperative to cut it out.

The AF amp appears to be permanently powered at 13.8V so
my presumption is that I'm listening to an amp with no input.

Sorry, I'm not delusional!

> or that heterodyne from
> Pitcairn Island.

You probably get that annoyance on an R-390A.

I prefer to use quality equipment made by R. L. Drake.

I tend to agree with you Steve. Tooling up to build five completely new R-390s for $190K would be hard to do. Fowler most certainly had access to the needed equipment and parts to do the job and that's probably a big part of why they got the job.

Brian,

Fix all the spelling errors and you might get someone to take your
website seriously.

Tracy

Brian,

Do you put the same quality into your amps as you do to your website?

Tracy

The quality of my amps are top notch. So what exactly is it your referring
to?

Yep me too - but AC6V's website to the rescue.

Six excellent links to explain it all -- even Kenwood's mysterious "Band Lock" feature.

Yep there's a few misspelled words. That really gets under your skin? I bet
you have a hard time finding a doctor you can trust, those guys are worst.
My wife's a transcriptionist at the Mayo her in MN and she's always
complaining about their spelling and grammar.

Just passing along a little constructive advice. It's yours to take or
leave. Whatever you decide to do, don't let your wife read your
website. You will never be able to shut her up.

Tracy

Well you'd be surprised who I've done audio and amp work for over the last
20 years and not one ever mentioned a thing about my spelling. My reputation
gets me work, not my spelling. But thanks for caring.

Oh OK! I did not see anyone that signed your website that I
recognized, but i'm sure that Big Bird and Elmo are very happy with
their amps. Good luck Brian....

Tracy

The site is only about a month old. You know you're the meanest girl I've
met on usenet in quite some time. Now go play and troll some other poor
bastard.

Looking for an adapter to plug in a Kenwood mic w/ 8 pin round plug to convert to Icom 8 pin round plug. OR the way to rewire the Kenwood plug to match the Icom input, matching 8 volt and return audio. ? Do you need to add a capacitor to the Kenwood mic lead? Will be looking at making an adapter; any help! <k4wys@cox.net>

Geez a month? It ought to be perfect in a month! Anyway, goodluck with
learning how to use spellcheck. I know it's tough but I think you can
get the hang of it with practice.

Tracy

It's "good luck", not "goodluck". You're not perfect either. Now
shut up and change your tampon.

How come your such a mean woman? No love? Be nice and it'll happen for ya.
That's my advice.

I'm mean because I'm a lesbian and I'm trying to get a piece from your
wife. She is such a hottie!

Your too stupid to even see how stupid your rally are. Ironically, people
like you always think their brilliant. Good day idiot. LOL!

Your right though, my wife is a hottie.

It is customary to bracket sarcasm with <sarcasm></sarcasm> tags to avoid
misunderstandings ;)

Regards,

Michael

Yes it went over my head.  I'm not used to dealing with rocket
scientists who have nothing better to do than pick on some guy who is
trying to run a business and maintain a web site.  Go stuff your pie
hole with some doughnuts, Officer Net Cop.

Incidentally, I have an R-390A here that is almost deaf on the lowest
band (.5 -1 MC).  All the other bands seem to be just fine.  Any suggestion
what the issue might be?

The other interesting thing about this set is that the balanced input seems
to be a problem even with the correct antenna source, but the unbalanced
C-connector input is okay.

Chuck Rippel worked on it and couldn't find a problem, and if HE can't find
a problem...

There are probably resistor spark plugs available for this car. They will significantly reduce ignition noise although other remedies, such as ferrite beads, will also be helpful.

Good afternoon...

I have several receivers and transceivers that I'm going to set up to monitor different frequencies. Then I'll use the main rig for transmitting (occasionally use the others to transmit but they'll be used for receiving 99 percent of the time).

I need to know how best to protect the front ends of the other radios from damage while I transmit, especially if I accidentally transmit on the frequencies to which they're tuned.

The main transmitter runs 200 watts and the antennas for all the radios are a few dozen feet apart, and that seems like an awful lot to go feeding into the front ends of some of the solid state rigs.

Receivers and transceivers are:
Icom IC-735
Kenwood TS-120S

Yaesu FT-1000
Kenwood TS-940
Hammarlund HQ-180A (I hope...if I find one) :-)
Zenith Transoceanic R-7000

The FT-1000 is the one that will be used most often for transmitting.

I'm not real concerned about the Hammarlund but the rest of them,
particularly the Zenith, seem somewhat vulnerable.

news:sci.electronics.equipment has a lot of people who work with and
on test equipment, and don't use the repair newsgroup becasue of the
signal to noise ratio.

Rick,
I think you are wise. If you are transmitting primarily from one
transmitter,
you could put paired diodes across the inputs of the monitoring receivers
and use parallel grounding relays connected to the enabling voltage of the
transmitting transceiver. Of course you would need to disable the grounding
relay on the transmitting transceiver.

Mind Control and Directed Energy Weapons

Do you know Mind Control Weapons and Brain Washing (such as CIA Mind Control Project : MKULTRA) ? Do you know voice can be transmitted to human's head from long distance(V2K)? (In 2002, the Air Force Research Laboratory patented precisely such a technology: using microwaves to send words into someone's head.)Do you know Directed Energy Weapons(such as: Electromagnetic weapons) and Non-lethal Weapons? Do you know that people's thoughts can be read now? Do you know Nano technology weapons (such as British MI5 Nano technology spy weapons which can control little spy mice from long distance)?

Such kinds of weapons have already been used covertly to torture and harass innocent, legal, unarmed and defenseless civilians for many years all over the world.

There are more than 1500 people who are suffering terribly from mind control and electromagnetic weapons torturing and harassment. Some victims were only 21-22 years old when the first time they were seriously tortured and harassed.

Have you ever imagined that there even was not one happy and peace day in the life, but only suffering for 5,10 or 20 years? Yes! Some victims died, but at the last minutes in their lives, the only thing belongs to them was still suffering.

Please come to help us by signing your support to stop these kinds of weapons torturing and harassing lawful citizens. Our goals:

(1) We wish a resolution from United Nations to stop Mind Control and Directed Energy weapons torturing and harassing.   (2) We wish all government cooperate together to sentence those torturers according to law.

More Information, please come to http://soleilmavis.googlepages.com
Blog: http://soleilmavis.spaces.live.com

Hi,
I'm trying to find a set that has a low standby current.The Yaesu FT817 seems to fit the bill but the standby current seems to let it down sadly (250mA squelched and 450mA on receive).I have a 2 meter handheld with all the bells and whistles (fm admittedly) which draws 10mA squelched.I would appreciate any comments and suggestions. - Steve

Comparing the FT817 to your HT is not a fair comparison. Your Ht has far less circuitry, probably has a power save feature, and many other limitations that the FT817 does not have. The FT817 is a full featured HF radio.

For a good assessment of the FT817 current draw, and some ways to lessen it, go to: http://www.ka7oei.com/ft817_pwr.html

I am looking for product features, specs, manual, etc. for this new radio from Kenwood.

The photo of the radio is shown in the advertisement on the back cover of the Aug. 2007 QST magazine.

I wonder if this is the replacement radio for the TM-D700A which has been in production for several years? Judging form the photo in QST it looks like this may be what is about to be released to replace the TM-D700A. There is not enought information in the ad to be certain but viewing the faceplate shown APRS clearly stands out in photograph of the radio.

The only thing I know about the radio is what is in the ad. I have not been able to find any information at the kenwood site nor at any dealer sites about this radio.

Kenwood or a secret dealer please let us know what we can expect from this radio and when it will be available for sale in the U.S. ... A MSRP would also be nice to know.

73's de N9ZN

UPDATE!!!! (SOMETHING IS GOING OBSOLETE?)

The Radio model number is actually TM-D710A and the "A" should denote APRS functionality. I think I may have figured part of my earlier question out for myself.

So much for buying a TM-D700A old model when there seems to be a new model on the way.

ONE BIG POINT TO BE MADE>>>
I bet we shall see a drop in price for the TM-D700A radios soon and we certainly should be asking for a big price reduction if anyone plans on buying a (soon to be obsoleted?) TM-D700A.

The new TM-D710A radio is labeled "Data Communicator 144/440Mhz FM Dual Bander". Please understand it is only my assumption that the "A" in the model number stands for APRS as I assume it does in the TM-D700A model.

I have a chance to buy a used RM Italy HLA-300-V HF amplifier, which can be driven by my FT-817 and claims to be capable of as much as 300 watts out on 160 through 10.

I know that some of the older RM Italy amplifiers were known for dirty output and poor harmonic suppression, and were intended mostly for illegal use on CB, but some of their newer offerings seem to be geared for the whole HF band and I'm wondering if they have cleaned up.

I know they are still illegal to import into the USA but this one is here now and I ask no questions about how it got here.

Any opinions about RM Italy in general and this model in particular?

Thanks...

Yes, it is the replacement. Kenwood had one on display, under Plexiglas, at Dayton. They always are a bit coy about new releases for regulatory, legal, and competitive reasons until the unit is good to go. Early last fall, I saw a prototype with "TM-0000" on the front panel, and as they did not power it up, it was rather hard to guess about features.

>
> Thanks...

RM Italy targeted the USA high powered CB market (big mistake). Those units (usually red colored) are only built for 26-30 MHz -- NO low pass filter switching.
Have you even gone to their Italian web site and looked?
http://www.rmitaly.com/home.asp
Much of it is junk for European and Middle East markets

They started an amateur radio line where they add a band switch on front panel -- HOWEVER -- I ahve NOT seen one. How to you get afilter to fit intot hat space -- doubtful that it is useful.

RM Italy has NOT not submitted their amateur units for FCC approval (spectral purity, etc.) -- which may require design changes to meet minimum requirements.

http://www.rmitaly.com/showProducts.asp?idgr=1&cat=19&NumPagRec=1

Do some GOOGLE searches, read reviews opinions on eHam.net

The "A" actually means it for the Americas (North, Central, South) market.
European Kenwood products have an "E" suffix because,
among other things, the European 2 meter amateur band is 144-146 MHz and the 70 cm band is 430-440 MHz.
VHF/UHF equipment for the Asian market usually have no letter suffix.

Right, but their newer ones (grey in color if I recall correctly) are, as
you noted below, designed for 160-10.

> They started an amateur radio line where they add a band switch on front

They look similar in size and form factor to Tokyo Hy Power HF amps which
seem to have a pretty good reputation.

> RM Italy has NOT not submitted their amateur units for FCC approval
> (spectral purity, etc.)

Of course not.  They couldn't get them approved anyway.  The FCC clings
tenaciously to that retarded rule of theirs against low-drive-power HF
amps... FT-817 and IC-703 owners be damned.  As usual, they are too lazy
to go after the real culprits so they penalize everybody.

Can anyone help?
I need the schematics for the power supply and
frequency counter/display units for this instrument.
Scanned copies acceptable and most welcome!
Have searched the web in vain.
Any assistance would be greatly appreciated.

And once again, that rule came into effect because companies and even
individuals were selling junk amplifiers for CB under the guise of
"not suitable for Class D citizen band use".

The rule has nothing to do with amateur radio, it has to do with
the illegal use of amplifiers on the citizen band.

Realistically, nobody should be giving business to a company that
sold such amplifiers, even if they are no producing legit amplifiers.
Because such companies are the reason for the rule, and feed their
pockets and you are basically giving them acceptance.

Right. My point exactly. The FCC can't seem to figure out how to go
after the real lawbreakers so they just enact a rule that penalizes the
rest of us just to save them from having to get off their asses and go
after the bad guys.

(I was going to say "pass a rule" but that implies that we actually got to
vote on that... sorry, don't know what I was thinking...)

> Realistically, nobody should be giving business to a company that

I suppose. But, the thing is used and privately owned, so I would be
giving money to somebody who gave money to somebody (etc. through who
knows how many levels) who gave business to a company that sold such
amplifiers.

Every time you fill your car with gas you give money to somebody who gave
money to somebody (etc. etc.) who gave money to the people who murdered
your fellow citizens on 9/11. And so on.

If we had to analyze every purchase we made on the basis of who eventually
gets the money, none of us would ever buy anything.

Why do u want to send this signal in the first place?

Stick your antenna in the ground!

You don't.

The only reason you'd send an SOS is because you were actually in
an emergency situation, and SOS is actually specified for a certain
level of emergency (ie you can't use it if your car breaks down).

ONce you start messing with sending SOS for any reason, you risk
causing a situation, where effort will be put into finding you, only
to discover there is no emergency.

Quoted from the Telstar Web Site:

"Whether you're whispering or shouting, VoiceMax holds your
transceiver at 100% modulation allowing you to punch through heavy
channel traffic without sacrificing voice clarity."

So, it is for AM modulation systems.  The previous poster was
right...it is CB equipment!  Telstar says it is, so who's to argue
with that.

This is RRAH... We build our own junk... You are spamming us with commercial announcements we don't care about and which do not meet the charter for this usenet group...
I personally don't care if your customers are CB, or broadcast radio, or whatever - but since all you are doing is trying to drum up a sale here, which is not what this group is for, why don't you move along to where your customers are... The chances that you will make even a single sale to a member of this usenet group are less than zero...

cheers ... denny

All

I have just installed a 1/2 wave G5RV dipole at approx. 30 ft above
ground. My shack is in the back of the house but on the second floor
(effectively in the roof of the house) above the garden but due to the
house design i think i would struggle to have a RF ground wire of less
than 30-40 feet.

Based on above discussions should I :

1) fit a ground rod and run this up to the shack even though its a
long way up along various walls

2) buy an articial ground unit such as the MFJ-931

3) forget about it and make do without a ground.

I am pretty thoroughly confused.

Thanks

Andy

Just operate and have fun. Finding a true RF ground is tantamount to
searching for the Holy Grail.

If your house utilizes metal radiators for heating, you might try
running a ground wire to a radiator and see if it helps.

Any antenna that requires a tuner for operation is most likely going to
have RF in the shack and on your radio. There really isn't much that you
can do about it, except juggle the length of the feedline, if you
operate mostly on one particular band.

Ed, NM2K

Thanks for speedy response. Therefore do i just need a DC earth on the
back of the radio and ATU?

If you use a dipole antenna you don't need a ground. I would use your
option 1. If you decide
to use a vertical antenna then you can figure your ground conductor as
part of the antenna. I did
that when I was living in a town house

I'm looking for a good working freq counter
for my vintage AM ham shack.
I wouldn't mind a Nixie tube display.
I need coverage from Hf thru 6 meters,
3 mhz - 60 mhz would be nice.

Does anyone have one that they'd like to get
rid of.

Monty,

The price is one of those things they were coy about at Dayton.
However, HRO has them in stock:

1) Manufacturer: KENWOOD
Item : TM-D710A
Description : 2M/440 APRS/TNC GPS/ECHOLINK READY
YOUR HRO PRICE $599.95

and AES has the same price.

It's probably in need of tweaking, cleaning or maybe the screw fell
out of the antenna (mine fell out I don't know when so don't laugh too
hard. Thing's made in China/mondodogkillerland)

Make sure you have all the batteries installed properly. how long till it
goes out?

It sounds like something connected with temperature, which could be any number of things.

Now this is a stretch, and a guess, but... Some classic GE transistor radios of 30+ years ago (such as the P975A) had completely separate AM and FM tuners. * If this is true for the SupeRadio, it might simplify troubleshooting.

I'd recommend taking a screwdriver and a can of freeze spray with you to the beach.

* GE made its own transistors, and as separating the tuners didn't increase the number of RF and IF elements required, the cost of wholly separate tuners was only a bit higher than combining them.

Sounds like a heat related problem. I have one of these I bought at the
Salvation Army in new condition for $5 I use for a work radio on
construction jobs. What a great sounding radio and so easy on batteries.

The SRIII doesn't have a tuner at all. It's a supremely crappy varactor
tuned set. If only the FM is going out, it's likely that the heat is
building up enough that the LO is failing. One thing to try is take a white
towel with you the next time you go out, and fold it over at least once and
let it on top of the radio to prevent the UV from the sun reaching that
lovely black (solar collector) cabinet.

The radio is Chinese-made garbage - the Eton/Grindig/Tecsun radios are garbage too...

I like the great sound on FM and the good reception on AM in a radio that it costs little next to nothing. A combination hard to find elsewhere...

The large built-in antenna (AM ferrite-bar) makes for good AM-reception, an the "well balanced" (though very cheap) set of speakers makes the sound unmatched for a light footprint radio this cheap.

I do have better sounding portable radios (older, genuine Grundig Satellit's) but they are totally different class and price range all together.

Greetings,
Knut Otterbeck

SHORT 75/40M DIPOLE
75/40 Meter Coil Loaded Dipole, less than 85 ft. In length, similar to
the Alpha Delta DX-DD but made with 12 & 14 gauge hard drawn copper

wire not soft house wire, Pre-tuned to the voice segments of the 75/40
meter bands. Coax fed and can be hung as a flat top or inverted Vee.
50 KHz or better less than 2:1 SWR on 75 and below 2:1 across the full
150 KHz of the 40 meter voice segment. Will cover all of 75 meters
using an antenna tuner. Can use on some higher HF bands using a
tuner. Will handle up to 300 watts.

For two dollars that I gave for one, the bandwidth switch is a big
help, even and the varactor does slip around if you aren't there well
enough on AM and either switch AFC on or off.

That AFC is sloppy and seems to be a big part of it's DX so-called
atrributes. It's really good for zeroing in on weak, mostly LOCAL AM
stations and improving them against splash or harmonics.

And don't forget to ad that whether or not this is about ebay, this
newsgroup, rec.radio.amateur.equipment is not a forsale newsgroup.
It's for the discussion of amateur radio equipment.

There is also sci.electronics.repair which currently has a thread entitled "HP 8640B repair headaches". The OP of that thread is apparently refurbishing them, and may be able to provide some hints.

If you want a prebuilt solution, check out linx technologies. They
have some simple chips and modules to start off with.

If you want to design it yourself, do a search for OOK (on-off keying)
transmitter and receiver schematics.

A link to get you started:
http://jap.hu/electronic/rf.html

FS: BIGBOY ROTATOR PACKAGE

THIS PACKAGE CONSISTS OF A PST-51 ROTATOR, & PST-61 ROTATOR, IT COMES WITH ONE HARD TO FIND "DIGITAL CONTROL" BOX. YOU CAN PRE PROGRAM 9 DIFFERENT DEGREE SETTINGS. IT ALSO HAS AN RS-232 CONNECTION FOR COMPUTER CONTROL OF THE BOX. THE SMALLER PST-51 ROTATOR IS RATED AT 23 SQ FT. LAST SUMMER I UPGRADED TO THE PST 61 ROTATOR, RATED AT 36 SQ FT FOR INCREASED WIND LOAD CAPACITY. THE PST-61 IS A BEEFY ROTATOR! IT USES THE SAME CONTROL BOX. INCLUDED IS FULL DOCUMENTATION AND NEW UNUSED "QUICK DISCONNECT" CONNECTOR FOR THE CONTROL BOX END. THE PST-61 PACKAGE RETAILS FOR $1399.00 MY PRICE: $750 FOR BOTH ROTATORS & ONE CONTROLLER. PICS OF BOTH ROTATORS & CONTROLLER AVAILABLE VIA EMAIL.

Spam Trap - You are right this Item should have been posted to
"Rec.Radio.Swap" with a "FA" {For Auction} at the start of the
Subject Line so that readers will know that this was in-fact an
Item For Sale {For Auction}.

FA - R-390A Receiver (1984 - Serial #2)
eBay: http://easyurl.net/R390A

Actually to be honest and correct the eBay Seller should

have Posted eBay Auction Listing for this Item reads:
FOWLER INDUSTRIES, R-390A,
SERIAL#2, RAREST EVER MADE
eBay Item Number: 220132158407
http://cgi.ebay.com/_W0QQitemZ220132158407

But then, since this is a 'Rare' Fowler Industries R-390A
with a very low Serial Number "#2" : The eBay Seller
did feel that other "Rec.Radio" NewsGroup may have been
interested in this R-390A. Such as :
Rec.Radio.Shortwave,
Rec.Radio.Amateur.Equipment,
Rec.Radio.Amateur.Boatanchors

Why I myself did not know that some R-390As were build
by Fowler Industries. Plus the eBay Auction "Description"
itself is a very interesting and informative read about this
"Rare' R-390A Receiver. I would even say to others that
-if- you were unaware of the Fowler Industries R-390A
Receivers and you have an interest in old R-390A Receivers;
you should take the time to read this eBay Auction
'Description' for the information that it presents.

Hi .. I have an IC2720H .. the separation cable that plugs into the
remote control head has been "separated" from the connector that plugs
into it .. I have a new connector, but I need to verify the color-lineup of the lines into the connector .. anyone have one handy to
list me out the colors?
If it's a straight-through that's easy .. the one end that plugs into
the main rf unit (when looking down with the nipple on the top and the
ends in front) is: yellow, red, white, braid, black, green.

Any help appreciated.
Thanks.

Dan, ve4drk

Grundig Yacht Boy 400 (or 400PE). Nice little radio to carry in your purse or luggage, but doesn't begin to touch an R-390 for performance (but then, an R-390 doesn't run on 4 AA batteries).

Out of curiosity is there a difference between a Fowler manufactured
R390A and one made by another company in 1984?

Interesting! I attended the Navy's answer to R-390A school more years ago than I would like to admit and I never heard of "Fowler Industries". Nice piece of history but agree that it should not have been posted in several of these groups for sale. As they say, there is a proper place for all the stuff for sale let alone ebay's rules and policies.

On a side note, I did notice a few posts stating these receivers in general were "junk". It all depends on your perspective. The sensitivity, when properly aligned, is still competitive with more modern equipment. If one were to set their new ((rig) (insert your favorite brand named, DSP, Solid state, processed, ET. here))next to a R-390 and exposed both to one hell of a EMP, which one do you think has a chance to still work?

Not that this was in the original design specifications but the R-390 has also stopped many a bullet or shrapnel for ripping an op in two.

To reiterate, it is all a matter of perspective kind of like relativity.

Regards,
Paul WD8OSU

Hello Folks,

Does the Icom IC-R1500 (almost the same as PCR1500) need a EEPROM backup like the PCR1000 used to? I find no mention of this in the docs or on the Icom web site.

I want to try out a spectrum analyzer software. The only one I could find is an older version from Colin (MM5AGM/GM1LUZ) for the PCR1000 and he really stresses the point that the EEPROM should be backed up before starting his software.

If yes, do you know how to do this? Also, does anyone know newer spectrum display software that goes beyond the 5MHz range of the Icom bandscope? No idea if Bonito would but from the description I don't think so and also it does not work in my case anyway.

ISTR reading one of the R390A sites that said the Fowler unit
was built from refurbished surplus R390A parts (EAC).

As I recall, the Navy burped up a need for a couple of more R390A units
for some reason or another, and put out a RFQ. Fowler won the bid.

Or maybe I am fantasizing?

-Chuck

Actually, the 390A is a pretty good performer. Sensitivity isn't a whole lot better than the Yacht Boy cheapies, but the front end noise floor is better, and the selectivity is amazingly better. The selectivity for SSB and CW on the R-390A is really something you have to try to believe. Oh yes, and the front end of the R-390A won't overload. Not even with a local transmitter on the same channel. The Yacht Boy overloads if you look at it too hard.

The bad news is that the audio quality stinks, in part due to the really sharp skirt of the filters that make it so selective and in part due to power amp design. So you might prefer the Yacht Boy if audio quality is more important than DX ability.

A couple years ago I did an A/B test between the R-390A and the current generation DSP-based Watkins-Johnson military surveillance receivers. The weak signal performance was about the same for CW, although the fancy detector on the W-J was a little bit better at dealing with weak SSB signals. The digital panadaptor with the automatic signal ID on the W-J was really slick, though.... I think the W-J was a winner for ergonomics.

I wouldn't want to try and repair that R-390A, though. It's a mechanical nightmare. On the other hand, I don't think I'd want to repair that W-J either.

Which brings up the question:

You see 390As made by various manufacturers - Motorola, EAC, of course Collins themselves, and now this Fowler. Any opinions on who made them the best? Any real differences between them?

Yacht Boy can get into the sub .1 microvolt sensitivity level (10db
S+N/N)? That's pretty impressive for a solid-state receiver... usually
noise floor is a problem down below .1uv...   Chuck Rippel has some that
can get into the .07 - .08uv 10db s+n/n I'm not patient enough to groom
mine that well.

> The bad news is that the audio quality stinks, in part due to the really

True, but...

So you might prefer the Yacht Boy if audio quality is
> more important than DX ability.

There's precious little (IMHO) worth listening to on SW(AM) DX these
days - and audio quality isn't too important when digging an RTTY signal
out of the chaos that is propaganda and religious broadcasters these
days...

> A couple years ago I did an A/B test between the R-390A and the current generation DSP-based Watkins-Johnson military surveillance receivers. The weak signal performance was about the same for CW, although the fancy detector on the W-J was a little bit better at dealing with weak SSB signals. The digital panadaptor with the automatic signal ID on the W-J was really slick, though.... I think the W-J was a winner for ergonomics.

To get peak performance with a 390/1/A - consider using a Sherwood synchronous detector, or similar...

For a "head to head" run of a Drake R8 and R8A; a pair of Watkins-Johnson HF-1000's, an R388, R390A and a JRC NRD-535 against an R390A with a Sherwood - see this:

<http://r390a.com/html/history.htm>

> I wouldn't want to try and repair that R-390A, though. It's a mechanical nightmare.

Once you get used to them - they're VERY easy to work on - admittedly - the geartrains can be a bit intimidating at first - but after a while - you get to don't even think about them... Of course with the 390/391 - you do learn to NEVER forget the green gear - it only takes once - and you remember from then on.

Sherry's 391 with it's power autotune - yeah - those tuning heads still give me pause - but Sherry just shrugs and jumps right into them - since she likes to keep them very clean and well lubed. (replacement parts are getting harder and harder to find - so it pays to prevent damage).

> On the other hand, I don't think I'd want to repair that W-J either.

This old dog is getting too old to learn new tricks... besides most of these new-fangled radios are more like sitting at this computer... no warm glow, no power geartrains slewing at break-neck speeds going from one preset to another... and certainly not the smell and sound of a 28 in the room... naw - give me my boatanchors (and it's probably appropriate to apologize to those in r.r.s and r.a.a.e groups - I didn't notice this was cross posted --- but since we're all on the subject - I'll leave it cross posted for now)...

My 390A is pretty stock - and as noted - just an average performer. Sherry cheats - she "usually" runs an R390A IF in her 391 for DXing, etc. -- though she can drop the stock 391 IF back in - in about a minute - when she wants to show off broadcast stuff (i.e. the 390A IF she uses is the only thing modified - it'd have to be "returned to stock" to go back in an "A")...

best regards...

You left out Helena-Rubenstien (yes the makeup people) --- though it's usually suggested that though they "took that specific contract (believed to be 80 radios) - they subcontracted one of the regulars to build the radios. Stewart Warner is suspected - since they had the contracts on "both sides" of the H-R contract... are were obviously in a position to build them much less expensively than most anyone else at the time.

back to your question - I'm sure there are those who nit-pick this detail or that detail - but in working with these radios over the past 35 years (and probably 100+ different radios both aboard ship and otherwise) - much of the time I have to look at the tag to see who built it - and even then - after being in the fleet for any length of time - there'll be a "mix" of modules in the radio from any number of sources.
  Many I worked on were Stewart Warners - which as often as not had several Capehart modules in it -- as does my current 390A - though I suspect from a couple of things the frame itself started out as a Capehart and had it's tag "swapped". That's not as uncommon as you'd think - sometimes it'd be easier to fix a radio by sliding another one in it's place - changing the tag so the "boss" didn't notice. I've been told this was rather common at some shore stations where people were more interested in "hitting the beach" than "hitting that dog"...

One of the great strengths of the Collins design - is that it is truly modular - the modules aren't dependent on a neighbor to work to it's best (i.e. there is almost no interaction of alignment / adjustment between modules. A module that works in one radio - will work just as well (in it's own right) in another radio. Obviously - an improperly working module will effect the radio's overall performance - but properly working modules can be shuffled like a deck of cards - and still work just fine - regardless of the "new neighbor".

like all things subjective - just my .02

The way the contracts worked in my experience was they would all had to
meet the original design specs/requirements.

I noticed a reference to sensitivity being .1 uV and I can tell you that
if I worked on one that was in that range I started looking about to see
what was wrong with it! While working on several banks of the silly
things, .0 something uV was the norm. I'm not saying that was the
minimum specs that were required as I can't remember just that they very
often exceeded them.

They were a mechanical nightmare and a bad thing if you were waring a
tie while aligning them. During an inspection, by an admiral no less,
one of my techs was aligning one and got his dress tie caught in the
gears. When the admiral walked in an "attention on deck" was yelled out
and this poor kid had a receiver hanging off his neck! It don't take
long for 60 or so pounds to suck you to the floor in that type
situation. The admiral was very understanding and although he didn't
offer to help the kid we all ended up going out on a relatively large
drunk.

But, still a nice, heavy, old, receiver.

I threw that number out as a point of comparison... as any 390/1/A
should perform that well as a minimum.

> While working on several banks of the silly

> things,

After working on "several banks" -- the one has to wonder - if it wasn't the tech that was getting "silly" (if not punch-drunk!)... ;-)

> .0 something uV was the norm. I'm not saying that was the minimum specs that were required as I can't remember just that they very often exceeded them.

The specs - and the way the specs were obtained - left a lot of "wiggle room". That's why the generally accepted measurment is made with the radio set to some specific settings - which generally produced the most "recoverable" signal - and that's using the 4 kc filter and standard AM detection; signal generator at 30% modulation with 10db S+N/N recovery. Otherwise - without knowing what the "settings" were - (and they varied depending on what tech manual you happen to have) - everyone would be comparing apples to oranges - rather than apples to apples.

Obviously - using a wider filter; bfo to detect carrier (or carrier re-insertion on SSB) would allow for detection WAY down into the noise (.06 or better). .07-.08 using the above settings (4K, AM, no BFO, 30% modulation) is akin to pulling a 20 pound rabbit out of an egg cup - pretty cotton-pickin' good!

> They were a mechanical nightmare and a bad thing if you were waring a tie while aligning them. During an inspection, by an admiral no less, one of my techs was aligning one and got his dress tie caught in the gears.

What in the name of Neptunus Rex was somebody working on a 390 IN A TIE for?

> When the admiral walked in an "attention on deck" was yelled out and this poor kid had a receiver hanging off his neck! It don't take long for 60 or so pounds to suck you to the floor in that type situation.

Uh, yeah - about 2 seconds - splat! what a hoot!

best regards...

So we heap a pile of dung on it's head, hang an "I'm an idiot" sign
around it's neck - and send it on it's way...

You'd be surprised how easy it is, Scott. Complete guides to tearing
down and rebuilding even the most complex assemblies (the RF
geartrain, the PTO) are on the web. Mine came from Fair Radio (a "used-repairable" unit) with essentially sand as the geartrain lubricant, so
I went through most everything.

> On the other hand, I don't think I'd want to repair that W-J either.

My WJ is 25 years old now and holding up pretty well, too, although
I'm sure it would take more than a 100W soldering iron and Bristol
spline wrench to fix if it had anything go wrong in the PLL!

Tim.
